14. ORTHOPEDIC SURGERY

Type of training acceptable to Board: A—Adult Orthopedics; C—Children's Orthopedics; F—Fractures. Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics, children's orthopedics, and fractures. Training in the basic sciences is given either as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 741 through 743.

Residents completing their training in these hospitals are eligible for full certification by the American Board *of Orthopedic Surgery, including children's orthopedic surgery.*

Hospitals, 294; Residencies, 1,096

14. ORTHOPEDIC SURGERY—Continued

Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics and fractures. Training in the basic sciences is given as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 741 through 743.

Residents completing three years of training in Adult Orthopedics and Fractures at these hospitals are eligible for limited certification by the American Board of Orthopedic Surgery, not to include children's orthopedic surgery.

---

* The total residency programs in Allergy at these centers also include Adult Allergy. Accordingly, residency programs in centers with the symbol (*) are in the "Mixed" category referred to under Board Requirements on page 828. Reference should also be made to the listing of hospitals approved in Allergy on page 707. Residency programs in these hospitals are in the "Adult" category referred to under Board Requirements on page 828. All other residency programs listed above under Pediatric Allergy, are in the "Pediatric" category referred to on this page.

18. PEDIATRICS

Residency programs in the following hospitals have been approved by the Council, the American Academy of Pediatrics and the American Board of Pediatrics, through the Residency Review Committee for Pediatrics, as offering full training in the specialty: (i. e., TWO or more years).

Hospitals, 278; Residencies, 1826

21. PREVENTIVE MEDICINE

AVIATION MEDICINE

The following programs in Aviation Medicine have been approved by the Council and the American Board of Preventive Medicine, through the Residency Review Committee for Preventive Medicine, as offering acceptable training in the specialty.

School	Location	Director		Length of Approved Program (Years)	Beginning Stipend (Month)
UNITED STATES AIR FORCE					
School of Aviation Medicine Hq., Air Materiel Command.	Wright-Patterson Air Force Base, Ohio	W. F. Hall	For information regarding program, write to: Chief, Medical Division Office Surgeon General, U. S. A. F., Washington 25, D. C.	4[1] 1 (3d yr.)	...
School of Aviation Medicine	Brooks Air Force Base, Texas	O. O. Benson, Jr.	For information regarding program, write to: Chief, Medical Division Office Surgeon General, U. S. A. F., Washington 25, D. C.	1 (2d and 3d year)	
UNITED STATES NAVY					
School of Aviation Medicine	Pensacola, Fla.		For information regarding program, write to: Director, Graduate Medical Training Bureau of Medicine and Surgery, U. S. Navy, Washington 25, D. C.	2	
NONFEDERAL					
Ohio State University Medical Center	Columbus, Ohio	W. F. Ashe		3	302

---

[1] Includes one year at a school of public health, one year Advanced Course in Aviation Medicine, one year residency, and one year of supervised practice at selected sites.

Numerical and other references will be found on pages 788 through 790.

21. PREVENTIVE MEDICINE—Continued

OCCUPATIONAL MEDICINE

The following educational institutions have been approved by the Council and the American Board of Preventive Medicine, through the Residency Review Committee for Preventive Medicine, for THREE years of training in Occupational Medicine. The academic portion of these residencies will be given in the institutions listed. The in-plant training is being arranged, and the first separate listing of such programs is published in this issue immediately following the list of institutions giving the academic portion.

School	Location	Physician-in-charge
Yale University Department of Public Health	New Haven, Conn.	J. W. Meigs
University of Michigan Medical Center	Ann Arbor, Mich.	S. E. Miller
University of Rochester School of Medicine and Dentistry	Rochester, N. Y.	J. H. Sterner
University of Cincinnati Institute of Industrial Health, Graduate School of Arts and Sciences	Cincinnati	R. A. Kehoe
Ohio State University Medical Center, Department of Preventive Medicine	Columbus, Ohio	W. F. Ashe
University of Pittsburgh, Graduate School of Public Health	Pittsburgh	A. G. Kammer

The following plants and agencies have been approved by the Council and the American Board of Preventive Medicine, through the Residency Review Committee for Preventive Medicine, for ONE year of training to cover the requirement for in-plant training in residencies in Occupational Medicine. For further detailed information concerning a program, it is suggested that the applicant write to the physician in charge of the particular program concerned. Additions to this list will be published in a subsequent issue of THE JOURNAL.

Plant or Agency	Location	Physician-in-charge
Caterpillar Tractor Co.	East Peoria, Ill.	H. A. Vonachen
General Motors Corporation	Detroit, Mich.	S. D. Steiner
New York State Department of Labor, Division of Industrial Hygiene	New York City	M. Kleinfeld
Eastman Kodak Co.	Rochester, N. Y.	J. H. Sterner
National Lead Company of Ohio	Cincinnati, Ohio	J. A. Quigley
Hq., Air Materiel Command..	Wright-Patterson Air Force Base, Ohio	W. F. Hall
Westinghouse Bettis Atomic Power Division	Pittsburgh	R. E. Masters
Allis-Chalmers Manufacturing Co.	West Allis, Wis.	P. J. Whitaker

PUBLIC HEALTH

Residency programs in Public Health in the following states and cities have been approved for training by the Council and the American Board of Preventive Medicine, through the Residency Review Committee for Preventive Medicine.

25. RADIOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Radiology through the Residency Review Committee for Radiology. These programs are approved for THREE years of training in all phases of Radiology. All programs listed offer three years of training intramurally, or on an integrated basis, or through affiliation with another approved institution. Hospitals listed with the following symbol (#) are approved and offer training of three years intramurally, in addition to participating in an integrated residency program.

Hospitals, 374; Residencies, 1,879

NUMERICAL AND OTHER REFERENCES

1. Appointments available to women applicants.
2. Appointments available to women applicants only.
3. Appointments available to graduates of foreign medical schools.
4. Training at the third year level only.
5. May include one year fellowships in the Department of Cardiology.
6. May include one year of training at Cook County Hospital, Chicago, by special arrangement.
7. May include one year of surgical research at Louisiana State University School of Medicine.
8. Includes fellowships.
9. In addition to three intramural years at White Memorial Hospital, coordinated three year program: White Memorial Hospital affords two years, Presbyterian Hospital-Olmstead Memorial Hospital one year. Residents should apply to White Memorial Hospital.
10. In addition to three intramural years at Veterans Administration Hospital, coordinated three year program: Touro Infirmary affords one year, Veterans Administration Hospital final two years. Residents should apply to Veterans Administration Hospital.
11. Coordinated three year program: Peter Bent Brigham Hospital affords 18 months. Veterans Administration Hospital, West Roxbury, Mass., 18 months. Residents should apply to either hospital.
12. In addition to three intramural years at Lincoln Hospital, coordinated three year program: Lincoln Hospital affords two years, Hackensack Hospital one year. Residents should apply to Lincoln Hospital.
13. Approved Category I. Residents interested should consult J. A. M. A., Vol. 171, No. 6, pp. 824-828, Oct. 10, 1959.
14. Coordinated three year program: St. Vincent Hospital affords two years, Maumee Valley Hospital, one year. Residents should apply to St. Vincent's Hospital.
15. In addition to three intramural years at Graduate Hospital of the University of Pennsylvania, coordinated three year program: Graduate Hospital affords two years, final year at Mercy Hospital. Residents should apply to Graduate Hospital.
16. In addition to three intramural years at City of Memphis Hospitals, coordinated three year program: City of Memphis Hospitals affords two years, Baptist Memorial Hospital one year. Residents should apply to City of Memphis Hospitals.
17. In addition to three intramural years at King County Hospital, Unit No. 1 (Harborview); coordinated three year program. King County Hospital affords two years, final year at Veterans Admin. Hospital, Seattle. Residents should apply to King County Hospital.
18. Training limited to Contagious Diseases.
19. In addition to three years in Internal Medicine, one year of training in Hematology is available.
20. Co-ordinated three year program. Watts Hospital affords two years, North Carolina Memorial Hospital affords one year; residents should apply to Watts Hospital.
21. Combined integrated program—Bellevue Div. II (Cornell and Memorial Cancer Center.)
22. Training in pediatric psychiatry (third year level).
23. To include one year of affiliate training at the second year level at the University Hospitals (Lakeside) Cleveland.
24. This one year of training is equivalent to one year of basic science as a part of an approved three year program.
25. One year of clinical investigation available.
26. An additional one year of fellowship training in cardio-pulmonary laboratory is available.
27. Includes one year of training at Veterans Administration Hospital, Iowa City.
28. Provides training at the third year level, affiliate training with University of Minnesota Hospitals, Minneapolis.
29. Approved for affiliate training only.
30. Obstetrical and Gynecological pathology only.
31. Co-ordinated three year program; two years at Kings County Hospital. One year at Brooklyn Hospital; residents should apply to King's County Hospital.
32. Approved Category P. Residents interested should consult J. A. M. A., Vol. 171, No. 6, pp. 824-828, Oct. 10, 1959.
33. LaRabida Sanitarium, Lewis Memorial Maternity Hospital, Municipal Contagious Disease Hospital, St. Joseph Hospital, St. Vincent's Hospital, Chicago.
34. Methodist Hospital and St. Francis Hospital Divisions.
35. Affiliate rotation at Yale-New Haven Medical Center, Grace-New Haven Community Hospital.
36. Six months of training is afforded at University Hospitals, Iowa City.
37. Offer training at the third year level only.
38. In addition to the three year program at Bellevue Medical Center, Division I, another program has been approved for two years of training which includes rotation on the following services:
    Columbia University Division and Medical Chest Service, Bellevue Hospital.
    Columbia Research Division, Goldwater Memorial Hospital, Medical Service, Francis Delafield Hospital.
39. Includes one year of training at Parkland Memorial Hospital, Dallas, Texas.
40. Approved for training at the first year level.
41. Previous internship not required.
43. Approved Category H. Residents interested should consult J. A. M. A., Vol. 171, No. 6, pp. 824-828, Oct. 10, 1959.
44. Approved Category J. Residents interested should consult J. A. M. A., Vol. 171, No. 6, pp. 824-828, Oct. 10, 1959.
45. Includes one year fellowship in the cardiopulmonary laboratory.
46. Provides one year of training at third year level as part of three-year program at City of Memphis Hospitals.
47. Includes one year of training at State University of Iowa Hospitals, Iowa City.
48. One year of approved resident training in Pulmonary Diseases is offered at each the University of Kansas Medical Center, Kansas City, Kan., and the Veterans Admin. Hospital, Kansas City, Mo.
49. In addition to three intramural years at Sinai Hospital, Baltimore, coordinated three-year program: Sinai Hospital affords first two years, Fordham Hospital one year (third yr.). Residents should apply to Sinai Hospital.
50. Coordinated three-year program: Bayonne Hospital and Dispensary affords two years: Jersey City Medical Center, Jersey City, one year. Residents should apply to Bayonne Hospital and Dispensary.
51. Co-ordinated three year program; Beth Israel Hospital affords two years, Lawrence F. Quigley Memorial Hospital affords one year. Residents should apply to Beth Israel Hospital.
52. Joint Program—West Jersey Hospital, Cooper Hospital, Our Lady of Lourdes Hospital, Camden, N. J.
53. A second year of training available at Massachusetts General Hospital.
54. In addition to a three year intramural residency, a rotating residency which provides six months training on each of the following services: Columbia University Division, Bellevue Hospital; Medical Chest Service, Bellevue Hospital; Columbia Research Division, Goldwater Memorial Hospital, and Medical Service, Francis Delafield Hospital, is afforded.
55. Co-ordinated three year program; Massachusetts Memorial Hospital affords two years, Lynn Hospital affords one year (second year). Residents should apply to Massachusetts Memorial Hospital.
56. Combined three year program; Two years afforded at Ancker Hospital, one year afforded at Charles T. Miller Hospital. Residents should apply to Ancker Hospital.
76. Medical College of Alabama Hospitals, Birmingham, Ala.

REQUIREMENTS FOR CERTIFICATION

AMERICAN SPECIALTY BOARDS

Examining and certifying boards in 19 specialties have been approved by the Council on Medical Education and Hospitals of the American Medical Association and the Advisory Board for Medical Specialties on the basis of minimal standards governing accreditation of specialty boards as formulated by the Council.

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates for certificates issued by the respective boards, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to aid in evaluating residencies and fellowships under consideration by the Council on Medical Education and Hospitals of the American Medical Association, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, or a license to practice medicine or a specialty. The boards do not purport in any way to interfere with or limit the professional activities of any licensed physician, nor do they desire to interfere with any practitioners of medicine in any of their regular or legitimate duties.

Two boards certify candidates in subspecialties. The American Board of Internal Medicine certifies in allergy, cardiovascular disease, gastroenterology, and pulmonary diseases. The American Board of Pediatrics certifies in allergy. Certification in the primary field is a requirement for certification in the subspecialties. The Board of Thoracic Surgery, which is organized as an affiliate board of the American Board of Surgery, requires certification in surgery as a prerequisite to certification in thoracic surgery.

Certificates in special divisions of their specialty are conferred by six boards. The American Board of Obstetrics and Gynecology will issue certificates in obstetrics or gynecology only. The American Board of Otolaryngology grants a limited certificate in endoscopy. The American Board of Pathology issues certificates in pathological anatomy, clinical pathology, a combination of these two fields, pathological anatomy and clinical microbiology, clinical microbiology and clinical chemistry, clinical bacteriology, neuropathology, clinical microbiology, hematology, and clinical chemistry. The American Board of Preventive Medicine issues certificates in public health, aviation medicine, and occupational medicine. The American Board of Psychiatry and Neurology issues separate certificates in psychiatry and in neurology or a combined certificate for those qualified in both fields. This board also issues supplementary certificates in psychiatry and in neurology. The American Board of Radiology issues certificates in radiology, roentgenology, therapeutic radiology, diagnostic roentgenology, therapeutic roentgenology, radium therapy, radiologic physics, x-ray and radium physics, and medical nuclear physics.

The majority of the American specialty boards have published booklets containing a list of their officers together with statements regarding organization, purposes, and qualifications that determine eligibility for certification. In this issue of The Journal, there are published, with the consent of each board concerned, the requirements for certification in specialties. This information is published for the convenience of those physicians who are planning to seek board certification. Any specific inquiry concerning certification by a specialty board should be addressed to the board secretary, whose name and address will be found in this issue of The Journal.

Table 1.—*Approved Examining Boards in Medical Specialties*

Name of Board	Year of Activation	Total Certificates Awarded to June 30, 1959
American Board of Anesthesiology	1937	2,054

* Independent board established in 1949.

Table 1 contains a list of the approved specialty boards, the year of activation, and the total number of candidates certified through June 30, 1959. Data are also presented regarding the number of physicians certified in the subspecialties and those granted special certification by the boards in obstetrics and gynecology, otolaryngology, pathology, preventive medicine, psychiatry and neurology, and radiology.

A corrected total of 73,121 physicians was reported certified by the 19 specialty boards to July 1, 1958. From this date through June 30, 1959, 4,326 physicians were certified, bringing the total to 77,447 certifications on June 30, 1959. Forty-eight physicians were certified in the subspecialties, bringing that total to 1,626 on the same date.

Table 2 indicates the total number of physicians certified each year for the past 18 years by all specialty boards. The total number certified on June 30, 1959, was 77,447.

TABLE 2.—*Annual Specialty Board Certification, 1942-1959*

Year (Ended March)	No. of Boards in Existence	No. Certified	Cumulative Totals
1942	15	1,756	19,694
1943	15	2,172	21,866
1944	15	1,578	23,444
1945	15	1,308	24,752
1946	15	1,320	26,072

1954 (June 30)	19	4,133	56,619
1955 (June 30)	19	3,843	60,644
1956 (June 30)	19	3,083	63,727
1957 (June 30)	19	5,424	69,151
1958 (June 30)	19	3,970	73,121
1959 (June 30)	19	4,326	77,447

* One board, the American Board of Proctology, did not certify any candidates during this period.

The ninth edition of the "Directory of Medical Specialists," compiled by the Advisory Board for Medical Specialties and published in 1959 by the Marquis—Who's Who, Chicago, contains biographical information on the educational background of each living specialist including those retired from practice, certified by an American board.

AMERICAN BOARD OF ANESTHESIOLOGY

CURTISS B. HICKCOX, President, Hartford, Conn.
FREDERICK P. HAUGEN, Vice-president, Portland, Ore.
DONALD L. BURDICK, New York
STUART C. CULLEN, San Francisco
ROBERT D. DRIPPS, Philadelphia
ALBERT FAULCONER, Rochester, Minn.
E. M. PAPPER, New York
MILTON C. PETERSON, Kansas City, Mo.
HARVEY C. SLOCUM, Washington, D. C.
SCOTT M. SMITH, Salt Lake City
FORREST E. LEFFINGWELL, Secretary-Treasurer, Pasadena, Calif.

REQUIREMENTS

Each applicant, before he shall become eligible for certification as a Diplomate in Anesthesiology, must satisfy the following requirements:

1. Have been graduated from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association or have been screened by organizations acceptable to the Board.
2. Establish in a manner satisfactory to the Board, that (a) he is a physician duly licensed by law to practice medicine, (b) he has completed a satisfactory internship, (c) he is of high ethical and professional standing, and (d) he has received adequate special training in Anesthesiology.
3. Submit proof to the Board that he has limited his practice to Anesthesiology as a specialty for five calendar years, of which at least two have been training approved by the Board.
4. Prove to the satisfaction of the Board by such examinations and investigations as the Board may prescribe that he is qualified to practice Anesthesiology.
5. Personally prepare such case history abstracts of personally conducted procedures pertaining to Anesthesiology as the Board may specify.

Each applicant shall be classified for the purpose of examination and shall be examined in such a manner and under such rules as the Board may prescribe. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed advisable and without stating the same, and the action of the Board shall be final.

EXAMINATIONS

1. Written Examination: Eligible applicants may take this examination upon completion of two years of clinical training in a program approved by the Board. Written examinations are held annually in approximately 16 locations throughout the United States on the second Friday in July. Written examinations cover the basic and applied aspects of anatomy, chemistry and physics, pharmacology, pathology, and physiology. A passing grade, as determined by the Board, is required.
2. Survey Examinations: The Board may require a survey in addition to the letters and annual reports which it currently requires.
3. Oral Examinations: After limitation of practice to Anesthesiology as specified the candidate's qualifications are reviewed, and he may be declared eligible to appear for the oral examination. However, at least six months must elapse between the written and oral examination. Examinations are conducted semi-annually, in April and October. Examiners consist of Directors of the Board, and Diplomates who assist as associate examiners. Oral examinations cover all phases of Anesthesiology, including the basic sciences and clinical applications.
4. Practical Examination: Applicants are requested to submit to the Board annual reports of their anesthesia experience on forms provided by the Board. These reports covering the minimum number of years of clinical training and practice as prescribed must be filed with the Board in July of each year.

Applicants are entitled to three opportunities at yearly intervals to take the written examination. This three-year period begins on the date an applicant is first declared eligible for the written examination.

Oral examinations are given at six-month intervals. An applicant is entitled to one oral examination each year for a three year period.

In the event that a candidate fails an oral examination, at least 12 months must elapse before he may reappear for oral examination. The three-year period begins on the date an applicant is first declared eligible for the oral examination.

Failure to take an examination constitutes an opportunity just as much as failure to pass an examination. Under extenuating circumstances a candidate may apply for an extension of the three-year period by writing to the Secretary's office prior to the expiration of the three-year period. Under similar circumstances the Board, entirely at its discretion, may excuse a candidate from any scheduled examination without penalty, provided the request for such absence is filed prior to time of the examination.

A fee of $50 will be charged for each repeat in the written and oral examination. The Board may, however, at its discretion deny a candidate the privilege of reexamination.

If an applicant fails to pass either the written or oral examination within the allowed period, having taken one or more written or oral examination, his application will be declared void and reapplication will not be allowed.*

The Board reserves the right to limit the number of candidates to be admitted to any examination.

FEE

The fee shall be one hundred fifty dollars ($150). At least fifty dollars ($50) shall be paid upon filing the application, of which sum thirty-five dollars ($35) shall be returned if the candidate is not accepted for examination. The remainder ($100) shall be paid before taking the examination.

The Board is a nonprofit organization. The fees for examination and certification have been computed on a basis of cost of maintaining an administrative office and conducting examinations. The Board reserves the right to change the fee when necessary.

AMERICAN BOARD OF DERMATOLOGY

Marcus R. Caro, President, Chicago
Clinton W. Lane, Vice-president, St. Louis
Louis A. Brunsting, Rochester, Minn.
Edward P. Cawley, Charlottesville, Va.
Francis W. Lynch, St. Paul
Wiley M. Sams, Miami, Fla.
J. Walter Wilson, Los Angeles
Walter C. Lobitz, Jr., Assistant Secretary, Portland, Ore.
Beatrice Maher Kesten, Secretary, Office of the Board: One Haven Ave., New York

GENERAL REQUIREMENTS

Preliminary registration forms are acceptable after the applicant has met the following requirements:

1. High ethical and professional standing.
2. Graduation from a medical school approved, at the time of the candidate's graduation, by the Council on Medical Education and Hospitals of the American Medical Association. (Graduates of schools not on the approved list may be eligible provided they pass Part I and Part II of the examinations of the National Board of Medical Examiners.)
3. Satisfactory completion of an approved internship.
4. A state license to practice medicine in the United States or Canada issued following examination, or by endorsement of the certificate of the National Board of Medical Examiners, or regular status in the Armed Forces of the United States or Canada.
5. Citizenship in the United States or citizenship by birth in Canada.

SPECIAL REQUIREMENTS

The following minimum requirements have been established for admission to examination:

Formal training in dermatology and related subjects, of not less than three years. This training may be obtained as a resident, fellow, or graduate student in the institutions recognized by the Council on Medical Education and Hospitals of the American Medical Association and approved by the joint Residency Review Committee for Dermatology. One month in each year may be taken as a vacation. Vacations may not be postponed from one year to another. Candidates will be eligible for the written examination when a minimum of three full years have elapsed since the beginning of training.

The formal training shall include: At least one year full-time in an institution approved for three-year training in dermatology; graduate training in the basic medical sciences; and carefully supervised clinical and laboratory work.

METHODS OF TRAINING

The preferred method of training is a three-year well-integrated and continuing program in an institution approved for the full training period. At least one year of full-time training in an institution approved for three years is required.

However, apart from the required full-time year in such an institution, the additional training requirements may be fulfilled by training in institutions approved for one year or two years or in part as a preceptee.

Training must be completed within five years except where military service or other compelling circumstances shall intervene.

Suggestions for the study of Dermatology are given in the Syllabus of Graduate Training.

PERCEPTEESHIP TRAINING

Candidates may take one year of their training under the direction of a preceptor approved by the Board. Not more than half of each training day may be spent in the office of the preceptor; during the other half-day training must be undertaken in an approved institution. Although preceptorships may be taken during any one of the years of training, it is recommended that the preceptee have at least one year of dermatologic training previous to a preceptorship. After preceptees have become diplomates, they will be asked to fill out a Precepteeship Evaluation Form.

CREDIT FOR MILITARY SERVICE

Candidates who have served in the Armed Forces of the United States or Canada as physicians may submit credentials for possible credit toward training or experience. The Supplementary Application form for Military Training should be submitted with the Preliminary Registration form or at the termination of military services.

RESPONSIBILITY

It is the candidate's responsibility to make early contact with the Board, to ascertain and observe its regulations, and to file the preliminary registration and the application for certification forms. Candidates must meet all requirements before applying for certification.

Directors of training are responsible for submitting an Annual Graduate Training form on each candidate.

Approved preceptors, in conjunction with the director of training of the institution in which the candidate spends half his training time, are responsible for submitting an Annual Graduate Training form on each preceptee.

PRELIMINARY REGISTRATION

Each candidate must file a Preliminary Registration form with the Board at the beginning of training, whether or not plans are complete at the time. This establishes his identity and status as a candidate, and begins his permanent file. It enables the Board to detect any deficiencies in the plan of training. No fee is involved at this time.

ESTIMATES OF STATUS

Decisions as to the status of candidates who ask for an estimate of the further training needed can be made only by the Committee on Requirements upon submission of an Estimate of Status Form. The $25 registration fee, which will be credited toward the application for certification, must accompany this form. The Board acts as a body and through duly constituted committees. Individual members only carry out the rules and regulations of the Board.

---

*The re-application privilege may still be granted those who filed their original application prior to February, 1958, if they submit proof of an additional year of approved clinical training.

APPLICATION FOR CERTIFICATION

Application for certification forms may be filed before the end of the formal training period and must be made before the closing date regularly published in the Examinations and Licensure column of THE JOURNAL of the American Medical Association. Dates of examinations are also published here. Applications should be filed during the last year of training in order to obtain full advantage of the loan sets of histopathology slides available from the Armed Forces Institute of Pathology. Application will be considered with the accompanying registration fee of $25, which will not be refunded. When all supporting documents have been received the application is submitted to the Committee on Requirements, which appraises the qualifications of the candidate and decides as to his eligibility for examination. An examination fee of $125 is payable when the candidate is notified that his application is acceptable to the Board.

The total fee of $150 has been carefully computed and is used entirely for administrative purposes. Members of the Board receive no compensation except for actual expenses connected with the examinations.

EXAMINATIONS

Examinations are designed to ascertain the breadth of the candidate's knowledge in the basic as well as the clinical aspects of dermatology and to test his familiarity with the literature and to gauge his general qualifications as a specialist in this branch of medicine.

All applicants for certification must now pass a comprehensive written examination before they are elibible for the oral test. The written examination is held simultaneously in major cities. Applicants are then required to pass the oral clinical and laboratory examination which is conducted in a clinic. Cases will be seen and discussed with each candidate, and the examiners will seek to ascertain his knowledge of dermatology as well as of various related subjects.

Candidates whose applications have been accepted may take the next examination after the completion of training. Except in special circumstances, an applicant shall take the examination within a year following the filing of application. A candidate once accepted for an examination will henceforth remain eligible for only two succeeding examinations, unless some compelling circumstance, such as military service, shall intervene.

Candidates who have signified their intention of taking the examination and who fail to appear, or who cancel their request after the final notice has gone out, shall forfeit the examination fee.

The Board's records are confidential throughout. Examination marks will not be divulged. The findings of the Board are subject to its discretion and are final. Applications are accepted on this understanding.

PRECEPTORS AND PRECEPTEE TRAINING

Preceptors are diplomates of the Board of at least five years standing in active practice, recognized teachers of professorial rank, on the active staff of an institution approved for three years of graduate training in dermatology.

Precepteeships are now granted for only one year of graduate training. The preceptee must not spend more than one-half of his time in the preceptor's office. The remainder must be spent under supervision in an institution approved for three years of graduate training in dermatology. His work program should be based on not less than a 40-hour week.

A Preceptee Work Plan is filed with the Secretary of the Board previous to acceptance of each preceptee. Following the preceptorship, the preceptor, in conjunction with the director of training of the institution in which the candidate spends half his training time, submits an Annual Graduate Training form on each preceptee.

Each dermatologist who wishes to become a preceptor must file an Application for Preceptorship form with the Board. (*The Committee on Education passes on these applications.*) Detailed qualifications, rules, and regulations as well as duties and rights of preceptors and preceptees will be sent to dermatologists on request.

The Booklet of Information, Syllabus of Graduate Training, Lists of Institutions Approved for Graduate Training and of Preceptors are available from the Office of the Board, 1 Haven Avenue, New York 32, New York.

AMERICAN BOARD OF INTERNAL MEDICINE

HOWARD P. LEWIS, Chairman, Portland, Ore.
HUGH R. BUTT, Vice-chairman, Rochester, Minn.
WILLIAM A. WERRELL, Executive Secretary-Treasurer, Madison, Wis.
WRIGHT R. ADAMS, Chicago
GEORGE E. BURCH, New Orleans
JOHN MINOR, Washington, D. C.
HENRY BRAINERD, San Francisco
GARFIELD G. DUNCAN, Philadelphia
GEORGE A. PERERA, New York City
THOMAS H. BREM, Los Angeles
FRANKLIN M. HANGER, New York City
THOMAS A. WARTHIN, West Roxbury, Mass.
THOMAS FINDLEY, Secretary-Treasurer, Augusta, Ga.
VICTOR W. LOGAN, Librarian, Rochester, N. Y.

GENERAL QUALIFICATIONS

1. All candidates must be citizens of the United States or Canada. (For exceptions see "Graduates of Foreign Medical Schools not citizens of United States or Canada and returning to their homeland.")

2. All candidates must be licensed to practice medicine in a state, territory, province or possession of the United States or Canada.

3. All candidates must present evidence of satisfactory moral and ethical standing in the medical profession.

PROFESSIONAL QUALIFICATIONS

1. Graduation from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association at the date of graduation.

2. Satisfactory completion of an approved internship of not less than twelve months.*

3. Satisfactory completion of residency training according to the following Plans A, B or C. (Graduates of foreign medical schools may qualify only under Plan A.)

QUALIFICATIONS FOR EXAMINATION

Plan A

Written Examination: A candidate may apply for admission to the written examination after five years have elapsed since the completion of an approved internship. Three of these years must be spent in a full-time formal training program planned as follows:

(1) Three years of residency or fellowship training in the broad field of internal medicine in a program approved by the Residency Review Committee in Internal Medicine of the Council on Medical Education and Hospitals of the American Medical Association,

or

(2) Two years of such residency or fellowship training and *one year in a field related to internal medicine* in any institution in the United States or Canada acceptable to the Board. This alternative year may be devoted to (*a*) basic or clinical research, (*b*) work in a basic science department, (*c*) sub-

---

* During the period in which the 9-9-9 program was in effect an approved internship of nine months will satisfy the requirement of twelve months. A residency of nine months is considered as nine months only.

specialty training, or (*d*) formal training and study in an approved postgraduate medical school in the United States or Canada.

The remaining two years should be devoted to work in any clinical, investigative or basic science area related to internal medicine.

Obligated military service in the armed forces of the United States or Canada or the United States Public Health Service may be applied to this requirement of elapsed time but not to the three year period of formal training.

Oral Examination: The oral examination may be taken 12 months or more after passing the written examination. Candidates will be examined in the broad field of internal medicine without regard to specialty training. The Board has found that candidates do best when they have had wide clinical experience in the care of patients.

Plan B

Written Examination: If a candidate is unable to qualify under Plan A he may substitute continuous experience in the broad field of internal medicine at the rate of three years of such experience for each missing year of formal residency or fellowship training. He must also offer the two additional years of experience in an area related to internal medicine required by Plan A. Obligated military service may be applied as in Plan A. Thus, a candidate who qualifies under this plan with only two years of formal training will be eligible to take the written examination at the end of seven years after internship, and one with no residency training at all may qualify at the end of eleven years.

Oral Examination: The oral examination may be taken 12 months or more after passing the written examination.

Plan C

Written Examination: Plan C has been devised to broaden the opportunity for graduate education in terms of the requirements of this Board. *This plan is exclusive.* It is reserved for the use of *Chairmen of Departments of Medicine, in approved medical schools in the United States and Canada,* who may wish to recommend for admission to examination certain men who have planned a career in *academic medicine* but whose training has not satisfied the requirements of the other "Plans" authorized by the Board.

Candidates themselves may not elect Plan C. Specific recommendation that a candidate be qualified under this plan must be made by a *Chairman of a Department of Medicine in a Class A Medical School in the United States or Canada.* This recommendation must assure that the candidate has been under the jurisdiction and guidance of him or other persons whom he has selected or recommended during a five year period of training after internship; that this training has been shaped with the idea that the candidate has been preparing for an academic career; and that during the training period the candidate has had *adequate direct responsibility* for patient care in the broad field of internal medicine. Obligated military service, as described in Plan A, may not be included as a part of the five year period of training. This plan is intended for the unusual candidate. Each application will be considered individually by the Executive Committee of the Board.

If the candidate wishes to qualify after a minimum of five years of training, it will be the responsibility of the Head of the Department of Medicine concerned to affirm to the American Board of Internal Medicine that the candidate is qualified for admission to the examination. It well may be that the Head of the Department will require additional years of training beyond the minimum before recommending the candidate to the Board. A candidate qualifying under the foregoing provisions will be examined by the Board in the broad field of internal medicine.

The *Oral Examination* may be taken 12 months or more after passing the Written Examination.

Please see "definitions" as applied to the requirements of this Board.

GRADUATES OF FOREIGN MEDICAL SCHOOLS

GRADUATES OF FOREIGN MEDICAL SCHOOLS WHO ARE CITIZENS OF THE UNITED STATES OR CANADA AND LICENSED TO PRACTICE IN ONE OR MORE STATES OR PROVINCES IN THE UNITED STATES OR IN CANADA

REQUIREMENTS

1. All candidates in this classification must have passed the examination of the Educational Council for Foreign Medical Graduates and have received a permanent certificate. A photostatic copy of the certificate must accompany application for admission to examination.
2. Completion of an internship of one year approved by the Council on Medical Education and Hospitals of the American Medical Association.
3. Completion of the appropriate graduate training and subsequent experience in internal medicine after internship in accordance with the provisions of Plan A.
4. Two years of obligated service in the armed forces of the United States or Canada after internship may be applied in satisfying the time element but not the graduate training requirements.
5. A candidate may take the oral examination 12 months or more *after passing the written examinations.*
6. Please see "definitions" as applied to requirements of this Board.

GRADUATES OF FOREIGN MEDICAL SCHOOLS NOT CITIZENS OF UNITED STATES, WHO WILL RETURN TO THEIR HOMELAND AFTER COMPLETION OF AN APPROVED INTERNSHIP FOLLOWED BY THREE YEARS OF APPROVED RESIDENCY IN INTERNAL MEDICINE

1. Candidates in this classification are required to complete an internship of twelve months approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. Candidates must have passed the examination of the Educational Council for Foreign Medical Graduates and have received a permanent certificate regardless of time or school of graduation. A photostatic copy of the certificate must accompany application for admission to examination.
3. Candidates are required to complete thirty-six months of approved residency after internship in accordance with the requirements of plan A.
4. At the expiration of this time candidates legally required to return to their homeland by December 30 of the year of completion of residency may apply for admission to the written examination of the Board which is held on the third Monday of October of that year.
5. Candidates who pass the written examination will receive from the Board a statement that they have passed the written examination and will be eligible to apply for admission to the oral examination after satisfying the remaining requirements under plan A. All examinations will be given in the United States.
6. Candidates passing the oral examination of this Board will receive from the Board a statement that they have passed the written and oral examinations of the American Board of Internal Medicine. This "statement" may take the form of a document suitable for framing.
7. The Board reserves unto itself the right to reject any and all applications.
8. All candidates must be citizens of the country to which they are returning and licensed to practice medicine in that country.
9. The "statement" referred to in paragraph 6 may not be exchanged for a certificate of the Board in the event the candidate should return to the United States or Canada and qualify for citizenship.
10. Please see "definitions" as applied to the requirements of this Board.

DEFINITIONS

As applied to Requirements of this Board

1. *An approved internship* is defined as an internship of not less than one year (rotating or straight internship in internal medicine) approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. *An approved residency or fellowship* in internal medicine is defined as graduate training approved by the Residency Review Committee in Internal Medicine.
3. *Institutions recognized by this Board* are defined as:
   - *a.* All medical schools in the United States and Canada approved by the Council on Medical Education and Hospitals of the American Medical Association;
   - *b.* All hospitals approved for three years of residency or fellowship in internal medicine by the Residency Review Committee in Internal Medicine;
   - *c.* All state universities, colleges, recognized institutes for research and postgraduate schools of medicine, and schools of technology in the United States and Canada.
4. *Obligated military service* is defined as service under the requirements of an Act of Congress governing the "Doctors Draft".
5. *Graduate training* as referred to in the requirements includes an approved internship and approved residencies and fellowships.
6. *Postgraduate training* includes formal training and study in recognized graduate schools of medicine or basic science.

CREDIT FOR SERVICE IN THE MEDICAL CORPS OF THE ARMED FORCES OF THE UNITED STATES OR CANADA

Active duty as a commissioned officer in the Medical Corps for the periods Dec. 7, 1941, to Jan. 1, 1947, and June 1, 1950, to July 1, 1954, may be applied as one year of residency credit or one year of clinical experience regardless of assignment.

GRADUATES OF THE CHICAGO MEDICAL SCHOOL AND THE MIDDLESEX SCHOOL OF MEDICINE

Graduates of the Chicago Medical School prior to the approval of the Council on Medical Education and Hospitals of the American Medical Association in 1949, may apply under the provisions of plan A and at the discretion of the Executive Committee of the Board be admitted to examination.

Graduates of the Middlesex School of Medicine who received their degree in medicine prior to January 1, 1951, may apply under the provisions of plan A and at the discretion of the Executive Committee of the Board be admitted to examination.

PRINCIPLES OF TRAINING

The American Board of Internal Medicine is interested in the fact that the candidate has embarked on a career of study voluntarily and has thereby expressed the desire to excel and to participate personally in the world's progress in medicine.

Preparation must be based on years of continuous thoughtful study. Therefore, in suggesting a program for those who wish advice, the Board hopes to assist the candidates to avoid inferior and superficial programs which may lead to failure and disappointment in later years.

The Board believes that all internists should have a sound fundamental knowledge of Anatomy, Bacteriology, Biochemistry, Pathology, Pharmacology, and Physiology. Such knowledge is essential to the continued progress of any internist. The Board anticipates that adequate training will be obtained in the basic sciences as applied to internal medicine during a formal three year residency program.

The Board wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of internal medicine which the candidate must demonstrate to the Board in order to justify it in certifying that he is competent to practice internal medicine as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of maintaining the standards of knowledge required for certification rests with the Board.

APPLICATION

Candidates for examination must make their application on a prescribed form which may be obtained from the office of the Executive Secretary-Treasurer.

Applications must be filed by May 1 of the year concerned. All requirements must be satisfied by October 1 of the year concerned.

The application must be accompanied by a recent, signed photograph of the candidate and the registration and examination (written) fee of sixty ($60) dollars. Forty-five ($45) dollars will be refunded if the application is disapproved.

The oral examination fee of sixty-five ($65) dollars is due when applying for admission to the oral examination.

The certificate fee of ten ($10) dollars is due after notification of certification is received.

If three or more years elapse before a candidate completes his certification, the Board will require the candidate to file a new application.

METHOD OF EXAMINATION

1. *The written examination* is held simultaneously in different sections of the United States, Canada, and outside continental limits of the United States wherever eligible candidates are located. Only one written examination will be given each year. This examination will be held on the third Monday in October. This examination is divided into morning and afternoon periods of three hours each. The questions are of the multiple choice type, framed in such manner as the Board elects, and designed to test the candidate's basic clinical acumen and his knowledge of applied physiology, anatomy, physiological chemistry, pathology, bacteriology, and pharmacology as related to internal medicine.

2. *The oral examinations* are held near the time and place of the annual meeting of the American College of Physicians and at such other times and places as the Board may designate. Announcement of all oral examinations will appear in the *Annals of Internal Medicine* and THE JOURNAL of the American Medical Association. *Applications will be accepted as soon as the schedule is announced and cannot be accepted after the closing date published.*

The oral examinations are given by the members of the Board with the assistance of such guest examiners as may be selected, and are conducted at the bedside of patients assigned each candidate.

Candidates will be expected to present in a concise, orderly fashion pertinent facts in the history and diagnosis. Demonstration of important physical findings will be requested by the examiner. During the oral examination, questions will be asked concerning diagnostic and therapeutic procedures related to the problems under discussion and to any other aspects of Internal Medicine. Conciseness and clarity of statement as well as evidence of clinical maturity will be searched for, in addition to factual knowledge. Furthermore, the candidate should be prepared to demonstrate his ability to interpret objective demonstrations of roentgenologic, pathologic, hematologic, electrocardiographic and other abnormalities.

RE-EXAMINATION—WRITTEN AND ORAL

I. *Written Examination*

1. The interval between written examinations will be not less than one year.
2. The number of written examinations for which a candidate may apply is not limited.
3. A fee of thirty-five dollars ($35) is due upon application for reexamination.

II. *Oral Examination*

1. The interval between oral examinations will be not less than one year.

2. Candidates failing the oral examination three times, must re-apply for admission to the written examination. After passing the written examination again, candidates become subject to the same regulations and priorities in respect to the oral examination as apply to candidates who pass the written examination for the first time.

3. A fee of sixty-five dollars ($65) is due upon application for reexamination.

III. 1. The effective date of the changes referred to governing re-admission to the written and oral examinations was February 1, 1958 and will apply to examinations taken after February 1, 1958.

NOTE: Candidates are not required to repeat the examinations within the specified time limits. A longer interval may be elected between both written and oral examinations. Candidates who elect an interval of three years or more between examinations must file new applications.

CANCELLATIONS

A candidate who cancels his assignment to an examination will be required to pay a special fee before admission to a subsequent examination. This provision becomes necessary because of the large number of cancellations after complete arrangements have been made and the expense incident thereto.

Written cancellation fee	$25
Oral cancellation fee	$65

SUB-SPECIALTY BOARD–ALLERGY

WILLIAM B. SHERMAN, Chairman, New York City
VINCENT J. DERBES, New Orleans
STANLEY F. HAMPTON, St. Louis
HOWARD J. LEE, Milwaukee
MAX SAMTER, Chicago

SUB-SPECIALTY BOARD—ALLERGY

1. Two years, full time, including training both in allergy and internal medicine in an approved allergy clinic and hospital; or

2. One year, full time, including training in allergy and internal medicine in an approved allergy clinic and hospital, and two additional years of attendance and participation at least two half days weekly at an approved allergy clinic; or

3. Five years of attendance and participation at least two half days weekly at an approved allergy clinic; or

4. Twelve years in the practice of allergy after fulfilling the professional qualifications for certification in internal medicine, with evidence of sustained scientific interest.

5. All candidates who desire consideration in allergy must be certified in internal medicine before applying for admission to examination in allergy.

6. The candidate should be prepared for oral and clinical examination in the anatomy, pathology, physiology, and biochemistry of reactions of hypersensitivity. This will include immunology, immunochemistry, atopy, allergy of infection, collagen disease, and experimental hypersensitivity. He should be proficient in clinical diagnosis, laboratory procedures and in the treatment of allergic diseases. He should be familiar with the physiology of respiration, especially as modified by bronchial asthma and pulmonary emphysema and with the pharmacology of drugs used.

NOTE: Fellowship or research assignments not approved by the Council on Medical Education and Hospitals will require certification by the chief of service that such assignment was equivalent in graduate training opportunities and patient responsibilities to that of an approved residency in allergy recognized by the Board. This certification must be presented before the application is filed.

SUB-SPECIALTY BOARD–CARDIOVASCULAR DISEASE

BRUCE LOGUE, Chairman, Atlanta, Ga.
CHARLES A. R. CONNOR, New York City
A. CARLTON ERNSTENE, Cleveland
FRANK B. KELLY SR., Chicago
J. MURRAY KINSMAN, Louisville, Ky.
RICHARD H. LYONS, Syracuse, N. Y.
RAYMOND D. PRUITT, Rochester, Minn.

SUB-SPECIALTY BOARD—CARDIOVASCULAR DISEASE

The applicant should be of good character and excellent standing in his community, as attested by letters from sponsors of known integrity.

The applicant should have reached a state of maturity, compatible with the acquisition of sufficient factual knowledge and experience to form a basis for sound judgment. The Board believes that only exceptional persons are sufficiently mature for this sub-specialty before the age of thirty-five years or less than ten years after graduation from medical school.

The Board will make exception to this general rule of admission to examination, under unusual circumstances, largely to avoid injustice to the younger men of outstanding ability.

The candidate must have given clear evidence of his deep and constant interest in cardiovascular disease over a period of years. The Board is particularly interested in recommending for examination those applicants whose records indicate that their interest in cardiovascular disease will probably be sustained throughout life, and that their knowledge of the subject will constantly grow. Achievements in the field of research are regarded as evidence of such interest, but publication of articles or prolonged training in research work is not considered essential. Consideration will be given to the circumstances of each applicant's training and experience; those who have been in communities and institutions which offered excellent opportunities for contributions to the knowledge of cardiovascular disease will be expected to have made such contributions. Consideration will be given to the difference in experience of those whose opportunities for research have been more limited.

In most cases, it is deemed essential that the candidate, after thorough training in internal medicine, shall have received at least one full year of postgraduate education in cardiovascular disease, preferably under the guidance of a person known to be experienced and sound. Qualifications will be appraised by the Cardiovascular Board and admission of the applicant to the examination will be determined by a majority opinion of the Board.

Every candidate admitted to the certifying examination in cardiovascular disease will be expected to possess specialized knowledge of the kind indicated below. This list is by no means complete; it is intended to indicate the nature, rather than the extent, of the knowledge every applicant should have. In terms of its scope it should be regarded as the minimum, not the maximum. Persons possessing special knowledge and training in peripheral vascular disease may be expected to have a higher standard required in the examination in that portion of the field than in the certain details of other branches of cardiology, and the converse may be similarly applied.

1. Full and accurate knowledge of the anatomy of the normal and diseased heart, including its relationships to the external chest and to the other mediastinal structures. A comprehensive anatomical knowledge of all important blood vessels, including their aberrant locations.

2. A thorough knowledge of the normal and pathological physiology of the heart and peripheral circulation.

3. Detailed knowledge of the diagnostic signs which permit the recognition of all important diseases of the heart and blood vessels, such as arteriosclerosis, arteriosclerotic heart disease, syphilitic heart disease, rheumatic heart disease, constrictive pericarditis, auricular and ventricular septal defects, coronary thrombosis with myocardial infarction, thromboangitis obliterans, Raynaud's syndrome, coarctation of the aorta, aneurysm, patent ductus arteriosus, periarteritis nodosa and lymphedema.

4. Familiarity with the special methods used in the study of diseases of the heart and blood vessels. In the case of the heart, these include such technics as electrocardiography, roentgenography, catheterization and angiocardiography; in the case of vascular disease, such technics as the use of the oscillometer and thermocouple, arteriography, and venography, reflex vasodilation, the cold pressor test, color changes with elevation, dependency, temperature, etc.

5. Accurate knowledge of the pathologic changes associated with the more important diseases of the heart and blood vessels sufficient to enable the candidate correctly to evaluate the pathologic condition from gross specimens or microscopic sections.

6. Fairly extensive and detailed knowledge of the pharmacology relating to heart and blood vessels. This must include full knowledge of the important relationship of the autonomic nervous system both to the heart and to the peripheral vessels, and the effects of stimulation or paralysis of the various parts of the autonomic system by drugs or by surgical methods. The candidate should be intimately familiar with the use and effects of such important drugs as digitalis, quinidine, heparin, papaverine, epinephrine, dicumarol, penicillin, diuretics, sedatives, etc.

7. A sound understanding of the indications for conservative therapy, as well as for surgical procedures, in cardiac and peripheral vascular diseases (patency of the ductus arteriosus, arteriovenous anastomoses, constrictive pericarditis, scalenus, anticus syndrome, etc.).

In summary, it is the desire of the American Board of Internal Medicine and its Sub-Specialty Board in Cardiovascular Disease that physicians shall not be admitted to the certifying examinations unless they have exceptional qualifications as individuals and as experts in this sub-specialty of medicine.

SUB-SPECIALTY BOARD—GASTROENTEROLOGY

Henry J. Tumen, Chairman, Philadelphia
H. Marvin Pollard, Ann Arbor, Mich.
Julian M. Ruffin, Durham, N. C.
C. Wilmer Wirts, Philadelphia
Eric E. Wollaeger, Rochester, Minn.

SUB-SPECIALTY BOARD—GASTROENTEROLOGY

A. *Professional Standing*

The candidate must submit at least three letters from recognized Internists. At least one of these should be from a qualified Gastroenterologist who has served as the candidate's preceptor during a significant portion of his training in Gastroenterology, or from the head of the Medical Department in which such training has been obtained. These letters should attest to the candidate's professional qualifications and ethical standing. They should also contain specific information regarding the degree of the candidate's specialization in Gastroenterology and the work that he has done in this field.

B. *Education*

1. The candidate must be prepared to demonstrate that he has special interest and ability in Gastroenterology and has adequate knowledge of all phases of this branch of Internal Medicine, including a sound understanding of the basic sciences underlying this specialty as well as proficiency in its clinical practice. He is expected to demonstrate familiarity with the literature of Gastroenterology and to show that he has kept abreast of recent developments in this field. The candidate also must submit proof of adequately supervised training in the recognized gastroenterologic procedures and in gastrointestinal roentgenology (film interpretation).

2. The candidate must present evidence of fulfillment of one of the following requirements:

(*a*) A residency or fellowship for at least one year in Gastroenterology in an institution approved for such training by the Sub-Specialty Board in Gastroenterology of the American Board of Internal Medicine. A residency or fellowship that includes a program of education in the basic sciences is highly desirable.

(*b*) A formal continuous graduate course in Gastroenterology full time for at least eight months in an institution approved for such training by the Sub-Specialty Board in Gastroenterology.

A shorter graduate course—not to exceed four consecutive months—will be considered equivalent to the same amount of time spent in an approved residency or fellowship in Gastroenterology, if taken in an institution approved for this purpose by the Sub-Specialty Board in Gastroenterology.

(*c*) In the absence of (*a*) or (*b*), attendance and active participation for at least five years in a gastrointestinal ward or clinic in connection with which a definite teaching program in Gastroenterology is being conducted under the supervision of a qualified Gastroenterologist.

3. If requirement (*a*) under the above heading has been met, only two years of (*c*) will be required.

If requirement (*b*) under the above heading has been met, only three years of (*c*) will be required.

C. *Practice*

At least 60% of the candidate's work must have been devoted to Gastroenterology for at least three years before application.

SUB-SPECIALTY BOARD—PULMONARY DISEASES

Julius L. Wilson, Chairman, Philadelphia
Theodore L. Badger, Boston
Alvis E. Greer, Houston
Carl Muschenheim, New York City
Arthur M. Olson, Rochester, Minn.

SUB-SPECIALTY BOARD—PULMONARY DISEASES

1. Candidates for certification in pulmonary diseases shall fulfill the requirements of the American Board of Internal Medicine as to:

(*a*) General qualifications
(*b*) professional education
(*c*) Special Training

2. In addition to the general requirements of the American Board of Internal Medicine, candidates shall:

(*a*) Have completed a special training period in pulmonary diseases to include at least a year's work in a tuberculosis hospital or a general hospital with facilities for the care of tuberculosis and at least another year in the *practice* of pulmonary diseases in such an institution or in association with an older man competent in this field.

(*b*) Submit an application to the advisory board in this specialty, which must be approved by all of the members of this Board.

(*c*) Pass the written and oral examination of the American Board of Internal Medicine.

(*d*) Pass the oral and practical examination in pulmonary diseases.

AMERICAN BOARD OF NEUROLOGICAL SURGERY

Leonard T. Furlow, Chairman, St. Louis
E. Jefferson Browder, Vice-chairman, Brooklyn
George S. Baker, Rochester, Minn.
Edwin B. Boldrey, San Francisco
Dean H. Echols, New Orleans
Edgar A. Fincher, Atlanta, Ga.
W. James Gardner, Cleveland
Edgar A. Kahn, Ann Arbor, Mich.
Frank Mayfield, Cincinnati
William T. Peyton, Minneapolis
John Raaf, Portland, Ore.
Donald D. Matson, Secretary-Treasurer, 300 Longwood Avenue, Boston

GENERAL QUALIFICATIONS

1. Moral and ethical standing in the profession satisfactory to the board of directors.

2. It shall be discretionary with the board to accept for examination candidates who have been in neurosurgical practice more than six years but whose formal training fails to meet full requirements.

3. Properly qualified candidates who are permanent residents in and citizens of other countries and are legally qualified to practice medicine there and who have received their training in neurological surgery in the United States of America or Canada may apply for certification by the American Board of Neurological Surgery.

4. A special certificate may be issued to foreign (not United States of America or Canadian citizens) candidates who have received their training in neurological surgery in the United States of America or Canada and who are returning to their own country at the end of their training period, upon passing successfully the regular examinations of the Board, without completion of the requirement of two years in the practice of neurological surgery. This special certificate shall be appropriately identified to distinguish it from the regular certificate of this board.

PRELIMINARY PROFESSIONAL STANDING

1. Graduation from a medical school that is acceptable to the American Board of Neurological Surgery.

2. (*a*) Completion of a surgical internship of not less than one year in a hospital acceptable to the Board, or its equivalent in the opinion of the Board, plus a period of graduate study of not less than four years beyond the year of general surgical training in an approved hospital, or in a recognized graduate school of medicine, acceptable to the American Board of Neurological Surgery. Of this training period, at least 30 months must be devoted to clinical neurological surgery. The training in clinical neurological surgery must be progressive and not obtained during repeated short periods in a number of institutions. It is necessary that at least two years of this training be had in one institution, and the board will not ordinarily approve periods of training in clinical neurological surgery of less than one year.

OR

2. (*b*) Completion of a rotating internship of not less than one year in a hospital acceptable to the Board or its equivalent in the opinion of the Board, plus a period of graduate study of not less than four years beyond the year of rotating internship in an approved hospital, or in an accredited school of medicine acceptable to the American Board of Neurological Surgery. Of this training a period of at least six months must be in an approved clinical program in general surgery, and at least thirty months must be devoted to clinical neurological surgery. The training in clinical neurological surgery must be progressive and not obtained during repeated short periods in a number of institutions. It is necessary that at least two years of this training be had in one institution, and the Board will not ordinarily approve periods of training in clinical neurological surgery of less than one year.

Furthermore, the candidate must prepare himself to pass a Board examination in general surgery, organic neurology, neuropathology, neuroanatomy, neurophysiology, and neuroradiology.

The Board does not accept training by preceptorship.

An additional period of not less than two years of satisfactory independent practice of neurological surgery.

The above represents only the minimum requirements of eligibility for examination for certification by the Board.

APPLICATIONS

An application on the official application blank in order to be considered at any meeting must be in the hands of the secretary-treasurer of the Board not less than six months before the date of such meeting.

PAYMENT OF FEES

The fee for certification shall be one hundred fifty dollars ($150). The candidate for examination, on filing his application, shall accompany it with an application fee of twenty-five dollars ($25). The application fee will not be returned even though the application for examination is denied. When notified by the Secretary-Treasurer that he is eligible for examination, he shall send the examination fee of one hundred twenty-five dollars ($125) to the Secretary-Treasurer at least two weeks before the date of the examination.

THE AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY

F. Bayard Carter, President, Durham, N. C.
Robert A. Kimbrough Jr., Vice-president, Philadelphia
Herbert E. Schmitz, Vice-president, Chicago
Lawrence M. Randall, Assistant Secretary, Rochester, Minn.
Daniel G. Morton, Los Angeles
John L. Parks, Washington, D. C.
Conrad G. Collins, New Orleans
R. Gordon Douglas, New York City
Carl P. Huber, Indianapolis
Curtis J. Lund, Rochester, N. Y.
John I. Brewer, Chicago
Charles L. Buxton, New Haven, Conn.
Walter T. Dannreuther, Chairman, New York City
Robert L. Faulkner, Secretary-Treasurer, 2105 Adelbert Rd., Cleveland 6, Ohio

REQUIREMENTS

Each applicant, before he may become eligible to apply for examination, must establish the following facts:

1. The possession of the degree of Doctor of Medicine from an institution of learning approved by the Council on Medical Education and Hospitals of the American Medical Association.

2. That he is a physician of high ethical and professional standing duly licensed to practice medicine in the United States or Canada and is a member of a County or District Medical Society.

3. The completion of at least one year of intern service in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association. The Board accepts the fifth or "intern" medical school year required by some schools in lieu of the usual fifth or intern year of clinical training following graduation.

4. The completion of six years of training and practice after the first intern year to include three years minimum of progressive Residency Training in clinical obstetrics-gynecol-

ogy in approved institutions. Approved Preceptorship training may be substituted in part for Residency training as explained on pages 20 and 21. After July 1, 1962, this Board will not accept Preceptorships in lieu of approved, progressive Residency Training.

5. Following completion of acceptable training, two years of post-training practice, limited to the specialty, are required before application for examination can be made. Post-training practice may include practice within the specialty as an assistant or associate or independent practice. Periods of Residency in obstetrics-gynecology in excess of the required three years will not be accepted as a substitute for any part of the two required years of post-training practice except in the cases of men advancing from the Residency Training into full time faculty positions in Medical Schools and their affiliated hospitals.

6. That he is limiting his practice to obstetrics and/or gynecology and intends to continue to do so, except for possible military duty.

7. The Board conformed with the general acceleration in programs in medical education in that it will accept a period of nine "accelerated" months as an academic year in satisfying our requirements for each of three years of residency training. Such allowances can be made only for services during the wartime period of the official "accelerated program" and are not made for services before 1943 or after the discontinuance of this acceleration in 1946.

8. Applicants who possess a certificate from another Board may retain such certificate provided they agree to confine their future practice to obstetrics and/or gynecology.

9. The Board has ruled that physicians who accept male patients in their private or other practice, for operative or other care, cannot be regarded as specialists in obstetrics and gynecology, except by special ruling when this is related to active military duty.

10. This Board deprecates engagement in fields of practice other than that in which candidates profess to be specialists. The sole exception to this provision is that it is permissible for candidates and diplomates of the American Board of Obstetrics and Gynecology to participate in Emergency Care.

11. This Board will not accept applicants for examination who are not full citizens of the United States or of Canada. Foreign born applicants must have been certified by either the National Board of Medical Examiners or licensed to practice medicine in the United States or Canada, by a State or Provincial Board of Licensure. Notarized statements, not original citizenship papers, must be furnished when the application is filed attesting to the fact of full citizenship in the United States or Canada, if the applicant is foreign born. Further, there will be required a probationary period of at least three (3) years from the date of licensure in the practice of medicine in these countries before such a candidate may be admitted to examination.

SPECIAL CREDITS AND RULINGS

1. Physicians otherwise qualified, who were graduated before January 1, 1939, and whose required training was in obstetrics or gynecology alone, and who have confined their practice to obstetrics or gynecology for at least five (5) years immediately prior to application may be accepted for examination as candidates for certification in either obstetrics or gynecology. In all other respects requirements for eligibility remain the same as for those physicians graduated since 1939. At least a fundamental knowledge of both obstetrics and gynecology is essential regardless of whether a candidate's practice is limited to one or the other branch.

2. Basic science training should emphasize the relation of anatomy, pathology, physiology, biochemistry, and microbiology, to the application of surgical principles which are fundamental in all branches of surgery. More especially for this specialty there should be training in infertility, endocrinology, oncology, irradiation therapy, psychosomatic medicine and other nonoperative methods of diagnosis and treatment.

3. Since July 1, 1958, this Board has not allowed credit within the three years required training period for separately organized basic science courses which remove the candidate from clinical training in obstetrics and/or gynecology.

4. Training in abdominal surgery, in addition to the required three (3) years of training in clinical obstetrics and gynecology, is desirable and may be included in the total minimal six (6) years required after the intern year.

5. Applicants on service in obstetrics-gynecology under orders in hospitals of the Army, Navy, Air Force, and Public Health Service will receive residency training credit if such hospitals are officially approved for training in this specialty.

When the hospital is not approved, Preceptorship Training credit may be allowed if the service is supervised by a Diplomate of this Board or an otherwise qualified obstetrician and gynecologist. If such training credit is desired, candidates must comply with the regulation governing Preceptorships as published below. In addition, the Medical Officers Professional Training Record should be completed and attested while in military service.

Credit toward the required two years of post-training practice, limited to this specialty, will not be allowed for service in the Armed Forces except in the case of regular medical officers who have completed the training requirements.

APPLICATION AND FEES

Application must be made on a special blank which will be furnished by the Secretary's Office and must be forwarded with the other required credentials and the application fee to the Secretary's Office not later than August 1 of each year.

Candidates applying for admission to the examinations for certification are required to submit with their application an unbound typewritten list on 8½ by 11 paper of all their patients admitted to the hospitals where they practice, for the year preceding their application or the year prior to their request for reopening of their application, with the age, parity, diagnosis, pathological diagnosis, nature of treatment, and end result.

The list should conform to page 23 of Bulletin of the American Board of Obstetrics and Gynecology and be certified by the hospital librarian, administrator or superintendent.

The application fee is $35 and is not returnable.

The examination fee is $125, payable when the candidate is notified of acceptance for examination. This fee is not returnable after the candidate has been officially accepted by the Credentials Committee and notified to report for examination.

If the candidate fails the Part II examination on his original application, he may exercise the privilege of one re-examination (see Examinations, Part II) but will be required to pay a fee of $35 for such re-examination upon making request that his application be re-opened for this purpose.

The fees have been carefully computed on a basis of cost of examinations and are used entirely for administrative expenses. Examiners and Associate Examiners serve as such without compensation other than actual expenses.

APPRAISAL OF INCOMPLETE TRAINING

Many prospective candidates write the Secretary's Office outlining in their letters their training qualifications and asking informally if they are eligible, if this training has been sufficient and, if not, what is still lacking. Any candidate should be able to make a fair estimate of his eligibility after studying this Bulletin.

However, if the candidate wishes an informal evaluation of qualifications, a form "Application for Appraisal of Incomplete Training" should be requested from the Secretary of the Board. The request should be accompanied by a check for $15 to cover the clerical expense involved. Prospective candidates are reminded that this appraisal is not official and is subject to review and final decision by the Credentials Committee when they consider the application for admission to examination.

Appraisal of Incomplete Training forms should not be filed if Application for admission to examination has already been filed. This is unnecessary duplication.

Official interviews cannot be granted by the Secretary or other Directors of the Board unless requested by the Board.

Applicants declared ineligible for admission to examination may request re-opening of their application within two (2) years of the filing date without payment of an additional application fee. When a candidate requests that his application be re-opened, he must supply the Board with information to justify such further consideration. A request for the re-opening of an application declared ineligible by reason of insufficient training, non-limitation of practice, or similar items may not be approved in less than two (2) years, although application may be made as specified above to avoid payment of an additional fee. This approval time may be reduced under exceptional circumstances. The request must have adequate supporting evidence of additional training and experience to warrant reconsideration. Supplemental Training blanks should be used for such reports, and these will be supplied upon request.

After two ineligibility or postponement rulings on any candidate's application, an entirely new application must be submitted (with or without fee, according to current requirements) in order to bring data up to date. The essential feature of this should be evidence of additional training and experience.

Applicants declared eligible but who fail to exercise the examination privilege within three (3) years of the date of filing the application are required to file a new and current application and to pay a new application fee. Candidates should offer as sponsors or references, two Diplomates of this Board with whom they are presently in contact, rather than men under whom they served as Residents only. It is required that sponsors be from the candidate's community and currently acquainted with the candidate and his ability in his practice of the specialty.

When notice of acceptance for admission to examination has been received by the candidate it should be immediately acknowledged and the examination fee paid. Case reports must be forwarded to the Secretary within thirty (30) days.

EXAMINATIONS

Part I examinations are scheduled for January 15, 1960. Arrangements will be made for candidates to report in any convenient city where there may be a Diplomate of this Board to conduct or to supervise the written examination which will be sent out under sealed cover.

Special arrangement will be made through senior officers for conducting the written portion of the Part I examination for men in military service. Such candidates are requested to keep the Secretary's Office informed at all times of changes in their mailing addresses.

All applicants accepted for examination will be required to obtain a passing grade in both the written examination and a review of case reports (Part I), before becoming eligible for the oral-clinical and pathology examinations (Part II). The passing grade for the written examination and case reports is 75 per cent. A candidate whose grade in either or both falls below 75 per cent is conditioned. Re-examination for the removal of conditions in Part I may be taken after one year but within three years after the first failure, without payment of an additional fee.

Requests for re-examination in the written portion of Part I and requests for resubmission of case reports must be filed prior to August 1 of each year.

Candidates who successfully complete the Part I examination proceed automatically to the Part II examination held later in the year.

Requests for re-examination in Part II must be made prior to August 1 of each year.

Candidates appearing for re-examination under a new application after two previous failures will not be required, if they have passed all or part of the Part I examinations of their first application, to repeat such examination items already successfully cleared.

PART I

Examination consists of:

1. A comprehensive written examination, conducted annually, including questions on both obstetrics and gynecology and related basic sciences. The written examination will be limited to a maximum period of three hours.
2. The evaluation of twenty (20) important obstetrical and gynecological case reports in condensed form. Five (5) of the twenty (20) cases may concern major illnesses not necessarily operative. These reports must include a variety of material rather than a number of reports of one type. Case reports from one's Residency service shall not be more than five (5) in number.

CASE REPORTS

In the case of candidates applying for unilateral certification, case reports must pertain to the branch for which application is made.

Candidates holding full-time Medical School faculty appointments may submit the remainder of their case records from this full-time, non-private practice, but post-training service. (See Requirements.) The candidate should prepare and maintain in his possession a carbon copy of his case records in case of possible loss in shipping.

Evidence of adequate follow-up examination pertinent to each individual case must be submitted.

The candidate should submit separate verified index lists, in duplicate, for each individual hospital at which operations were performed. All of these must be formally signed by the responsible hospital official (preferably the hospital superintendent), attesting in each instance that the candidate was the operator.

In the upper left-hand corner of each index sheet there should appear:

Candidate's Name; and Name and Address of Hospital.

The data for each patient should be tabulated horizontally, reading thus:

1. Sequence number of case report (1 to 20).
2. Whether patient was from the candidate's Residency service or his own private or ward practice, as follows: "Res. Serv." or "Own Practice." All records failing to have this information will not be considered acceptable.
3. Patient's name or identifying initials, age, parity.
4. Date of patient's admission and hospital admission number.
5. Date of patient's operation.
6. Date of patient's discharge.
7. Dates of follow-up examinations.

At the foot of each index sheet should be placed the attested statement of the hospital official, referred to above. This statement should read as follows:

> This is to certify that the above listed case reports have been verified by me from the records of this hospital and these patients operated upon in this institution by Dr. ....; that the admission number and dates specified are correct. This is further to certify that the reports given the follow-

ing sequence numbers (......... to .... inclusive) were from the Residency service of the aforementioned physician and the reports given the following sequence numbers (......... to .... inclusive) were from his own practice (ward or private) in this hospital and that in all instances he was the chief operator.

....Signature

....Official Title

Date..

Each case report should be typewritten on standard size paper, 8½ x 11 inches, and those reports then assembled in sequence. Covers should not be used for separate reports, as this increases their bulk unduly. Reports should be bound loosely together in a light outside cover not larger than 10 x 12 inches, so that they may be opened and held like a book. The following items should be observed:

1. Each case report should be headed by identifying information corresponding with that of the index lists, including sequence number, designation as a "Residency" or "Own Practice" case, and so on.

2. The report of the case should begin with:
   (*a*) Preoperative diagnosis.
   (*b*) Postoperative diagnosis (based on findings).

3. The report should be in condensed form, not reported in detail. Follow-up findings of not less than six (6) months are essential. Omissions of follow-up examinations must be explained and justified.

4. Obstetrical reports which do not include essential pelvic measurements and note of methods used, will be considered incomplete. Surgical reports should contain description of the operation and the reason for selection of the procedure.

5. Each report must conclude with a critical analysis. When this is omitted the report will be considered incomplete and will not be acceptable. Candidates will not be admitted to the written examination unless the case records previously have been submitted.

6. Considerable time is necessary to grade the examination papers and case records. Accordingly the results will be announced as soon as is consistent with careful evaluation.

PART II

The oral-clinical and pathology examinations given all candidates are conducted by the entire Board and the Associate Examiners. Advance announcements of examination dates and place will be made in medical journals throughout the country. (Scheduled for Chicago, April 11 to 16, 1960.)

Examination consists of:

1. Oral examination before three or more examiners.

An endeavor is made to adapt the details of the oral examination to each candidate's experience and practice. The examination is particularly directed to ascertain his familiarity with recent obstetrical and gynecological literature, the related basic sciences, the breath of his clinical experience, and his general qualifications as a specialist in obstetrics and gynecology.

2. Pathology examination.

The candidate is expected to identify and to discuss pathologic specimens and microscopic sections.

Examiners report orally upon each candidate to the assembled Board, after which the results of their investigations are considered jointly by the entire Board and Associate Examiners. After a general consideration of the details of the candidate's oral and pathology examinations, including a review of his capability and general adaptability, the candidate is passed or failed by the entire Board of Directors.

The final action of the Board is based upon the candidate's ethical and professional record, training and attainments, as well as on the results of his formal examination.

When a candidate fails in Part II of the examination, he is not required to repeat Part I, but is required to repeat Part II only. One re-examination may be taken within three (3) years of the original examination and first failure without formal reapplication papers. Request for reopening of the candidate's original application must be filed with a re-examination fee of $35 (See Application and Fees). Application for re-examination in Part II must be made by the candidate prior to August 1 of each year. Data regarding additional training or experience and Medical School or hospital appointments acquired in the interim must be cited in the letter and verified on a Supplemental Training Form obtained from the Office of the Secretary of this Board.

The candidate may be allowed to reappear at the examination following the one failed by him. The Board may, at its discretion, deny the candidate the privilege of re-examination.

Failure to exercise the privilege of re-examination within three (3) years, entails the filing of a new application with the usual application and examination fees.

After two failures in either Part I or Part II on the first application, the candidate may reapply with a new application and reapplication fee of $35 and re-examination fee of $125 and be readmitted to examinations once only. Exceptions to this ruling can be made only by action of the entire Board of Directors in annual session, usually to be based upon evidence of additional training and experience sufficient to warrant such action.

GRADUATE TRAINING RESIDENCIES

This Board, through the Council on Medical Education and Hospitals of the American Medical Association, has approved institutions providing acceptable residencies in obstetrics and gynecology.

The American Board of Obstetrics and Gynecology has established the following requirements for its approval of a residency in a hospital department or service:

1. It is most desirable that the Chief of Service of the Department be certified by the Board, in the interests of the proper teaching of the specialty of obstetrics and gynecology. In lieu of such certification the Board will approve of individuals of recognized high professional standing in the specialty. At least one additional senior member of the staff should be similarly qualified.

2. Exceptions to the foregoing, in respect to the certified status of Chiefs of Service and others as outlined above, can be made by assent of the Committee on Residency Training, for adequate and justifiable reasons. As examples of the latter, the degree of F. A. C. S. in obstetrics-gynecology may be accepted in lieu of one of the two required certifications if the general reputation of the person concerned is known to the Committee as national or sectional in scope, or a professorial rank without certification might be acceptable.

3. In instances where the services of obstetrics-gynecology are not combined but are separate in any given hospital, the Chief of each such service seeking approval and at least one of his subordinates must be certified or otherwise qualified as outlined above. If obstetrics and gynecology are not combined in one department, approval can be granted only if arrangements are made for some degree of rotation of residents between both services, provided both services are separately approved.

4. If gynecology is classified in the given hospital as a subdivision or subservice of general surgery, approval cannot be granted for residency training in gynecology. Exceptions have been made if the subdivision of Gynecology is headed and staffed by a Chief and at least one other certified by this Board or otherwise qualified as specialists in obstetrics-gynecology, as specified above, thus ensuring an acceptable educational program in obstetrics-gynecology.

5. Departments holding official approvals for residency training are cautioned that their totals of residents appointed must be kept to the number specified in the A. M. A.-

American Board approval notification. Dilution of training facilities by unauthorized appointment of residents in excess of these numbers may be cause for reinspection and changes in approval status of such hospitals and their special services.

6. For further details of requirements and qualifications for approval for residency training, hospital officials should refer to the latest special issues of THE JOURNAL of the A. M. A. as they appear during each year, dealing with these subjects, or should apply to the Council on Medical Education and Hospitals of the A. M. A. for bulletins entitled "Essentials of Approved Residencies and Fellowships."

7. Application for residency approval must be made in triplicate on special forms provided for this purpose. These forms may be obtained from the Secretary of the Council on Medical Education and Hospitals of the A. M. A. All statements amplifying an application should also be made in triplicate. The hospital should keep a duplicate of all papers.

8. The formal application, with all papers, for residency training approval should be submitted primarily to the Council on Medical Education and Hospitals of the A. M. A., 535 North Dearborn Street, Chicago 10, Illinois. Action is taken jointly by the Council and this Board after survey by the Council.

9. Approvals are granted according to adequacy of the training program and teaching facilities of various institutions on the following several bases: (*a*) one-year approval in obstetrics and gynecology (combined) or one-year approval in obstetrics and/or in gynecology (separate), correlated basic science instruction being an essential part of the first year; (*b*) two-year approval in obstetrics and gynecology (combined) or two-year approval in obstetrics and/or in gynecology (separate), provided there is opportunity in the latter instances for some degree of rotation between the two services as well as laboratory instruction in basic sciences; (*c*) three-year approval in obstetrics and gynecology (combined) or in obstetrics or in gynecology, provided there is opportunity for one to one and one-half years' service in the branch of the specialty opposite to that in which the candidate holds appointment, as well as laboratory instruction in the basic sciences of both branches.

Exchange residencies within the specialty between approved institutions are acceptable and to be encouraged. Many authorities believe that training in more than one institution is broadening to the candidate. "Farming out" to unapproved institutions or services is not acceptable unless the work of such services is directly and carefully supervised by the Chiefs of the service in the approved hospital under which the man is actively appointed and working. This should be attested by such Chiefs.

Exchange residencies into other specialties cannot be permitted to subtract from the minimal required three (3) years of training divided between obstetrics-gynecology. As noted elsewhere in the Bulletin two (2) years of post-training practice limited to the specialty is necessary before a candidate may apply for examination. This Board has no objection to residency services being arranged by hospitals for periods longer than three (3) years, unless this dilutes the candidate's clinical training opportunities too much during the first three (3) years. However, the Board does not accept a fourth year, or more, of residency training as a substitute for any part of the required two (2) years of post-training practice.

The importance of post-training practice in the specialty is emphasized as an opportunity for maturing of the candidate and for colleague appraisal of a man's ability when working on his own responsibility in his chosen community.

Exception to this ruling may be made for men advancing from their training into and planning to remain in full-time teaching positions. These men then must complete at least two (2) years in such positions. Consequently the only institutions in which men may work as fourth and fifth-year residents and obtain credit for this time as "post-training practice" are those directly affiliated with approved Schools of Medicine as teaching hospitals for undergraduate instruction. These "full-time" men must hold faculty appointments, must have teaching duties with undergraduate students, must be given independent authority more than that of residents, and must make a declaration of intention to remain in full-time teaching work.

10. Any physician formally obligating himself to serve a residency in a Council on Medical Education and Hospitals of the American Medical Association-American Board of Obstetrics and Gynecology approved hospital and thereby eliminating other possible candidates from the position, who breaks his contract without justifiable cause, either before beginning his service or during his period of service, except by mutual consent and agreement between the candidate and the hospital, may be barred from the examinations for certification at the discretion of the Board.

PRECEPTORSHIP TRAINING

Preceptorships initiated after July 1, 1958 must have been preceded by two (2) years of formal training in an institution approved for Residency training in obstetrics and/or gynecology. Candidates who propose Preceptorship Training must notify the Secretary of the Board of such intent and request an application form. When this has been completed, signed by the Preceptor and Preceptee and returned to the Secretary, it will be submitted (as has long been true of Residency Training Programs) to the Residency Training Committee of the Board for their decision. The request should be accompanied by a check for $35 to cover clerical expense involved.

If the program is approved the Preceptor must supervise closely the candidate's work and keep an informative record of the candidate's performance. The Preceptor and the Preceptee shall report in writing to the Secretary of the Board at the end of each six months of Preceptorship, outlining the progress of the training program. This information will be placed in the candidate's application for admission to examination in order that it may be evaluated by the Credentials Committee. Failure to fulfill these requirements after due warning by the Secretary will result in termination of the Preceptorship.

As a general rule each year of Preceptor Training will receive a six months' credit toward the total of three years of training necessary for admission to examination. As is the case with candidates whose training has been entirely by formal Residency, each application will be evaluated finally by the Credentials Committee.

An acceptable Preceptor preferably shall be one certified by the American Board of Obstetrics and Gynecology and must have been certified for a minimum of five years. Fellowship in the American College of Surgeons or long experience and established reputation as an obstetrician-gynecologist without either of the above qualifications may qualify the Preceptor.

Preceptor and Preceptee must work in a hospital approved by the Joint Commission on Accreditation of Hospitals.

The post-training practice requirement cannot be carried on concurrently with Preceptorship Training.

After July 1, 1962, this Board will require a minimum of three (3) years of approved progressive Residency Training to fulfill the requirements for admission to examination. After the above date training by Preceptorship will no longer be acceptable. Therefore the initiation of Preceptorships will not be approved after July 1, 1960.

AMERICAN BOARD OF OPHTHALMOLOGY

Gordon M. Bruce, Chairman, New York City
Paul A. Chandler, Vice-chairman, Boston
Banks Anderson, Durham, N. C.
Alson E. Braley, Iowa City
Arthur Gerard DeVoe, New York City
Michael J. Hogan, San Francisco
Harold H. Joy, Syracuse, N. Y.
John S. McGavic, Bryn Mawr, Pa.
C. Wilbur Rucker, Rochester, Minn.
Harold G. Scheie, Philadelphia
Kenneth C. Swan, Portland, Ore.
Merrill J. King, Secretary-Treasurer, Rockland, Maine
Miss Lea M. Stelzer, Registrar, Box 236, Cape Cottage Branch, Portland, Maine

PREREQUISITES

1. High ethical and professional standing.
2. Full citizenship in the country where the candidate practices. (Limited to countries of North and South America, their possessions and territories, and the Philippine Republic.)
3. A degree from a medical school of high standing, satisfactory to the Board and approved by the Council on Medical Education and Hospitals of the American Medical Association.
4. Completion of an internship of not less than one year in a hospital approved by the same Council.
5. Completion, by the time of the Written Qualifying Test, of not less than 36 months (a total of 60 months is required of candidates practicing both ophthalmology and otolaryngology) of combined study, training, and practice of ophthalmology in approved medical schools, hospitals, clinics, dispensaries, laboratories, and private practice.

APPLICABLE TO APPLICANTS WHO START RESIDENCIES IN OPHTHALMOLOGY AFTER DECEMBER 31, 1956

Individuals who have completed three years of formal ophthalmological training (residency and basic science courses) may apply for the written qualifying test after completion of 12 months of practice or 12 months of institutional work, a total of 48 months. All other individuals, with less formal training, may apply for the written test after 60 months in ophthalmology or 72 months of combined ophthalmology and otolaryngology. A basic course is recognized as equivalent in time to residency training. All time requirements must be completed by the date of the written test.

CASE REPORTS (EFFECTIVE IN 1960)

Every applicant for the 1961 written qualifying test must submit with his application certified reports of fifteen cases of major surgery performed by himself. These cases should be of diversified nature and must be prepared in accordance with instructions to be published later, and certified by the hospital where surgery was performed.

GENERAL REQUIREMENTS FOR ALL CANDIDATES

1. Application forms must be filled out completely and accurately. Letters of endorsement, together with any other required credentials, must be sent to the Secretary's office before the published deadline date.
2. Fee of $100.00 remitted with application.
3. A list of papers or books published.
4. Written qualifying test.
5. Practical examination.
6. Special review of ophthalmic surgery.
7. Licensure in the state, province, or country where the candidate practices.

SPECIAL TRAINING

This shall include:

1. Graduate study of the basic medical sciences which are fundamental to the intelligent practice of ophthalmology, particularly: anatomy, histology, embryology, optics, physiologic optics, visual physiology and psychology, pathology, bacteriology, pharmacology, disorders of ocular motility and binocular vision, perimetry, and in the skillful adjustment and use of instruments such as the ophthalmoscope, retinoscope, slit lamp, and microscope. Mere factual knowledge is not sufficient; the candidate must have had training in the application of these subjects and in their use in clinical ophthalmology, especially in refraction.
2. Active clinical experience in approved hospitals, clinics, dispensaries, and private practice. Library and laboratory facilities should be utilized for the intensive study of cases.

WRITTEN QUALIFYING TEST

Before being accepted for examination, candidates are given a Written Test to ascertain their qualifications. The questions may cover any part of ophthalmology and are especially devoted to the subjects listed on pages 6 and 8. The Written Test will be given in several principal cities at the same time. Choice of cities is determined largely by the geographical distribution of candidates. Candidates found acceptable will be notified to appear for a subsequent clinical examination in ophthalmology.

FEES

For original written test, $100, payable with application.

For original clinical examination, $50, payable on successful completion of the written test.

Repeating written test, $65.

Repeating clinical examination, $65.

Single conditions, $25.

Two or more conditions, $35.

Written qualifying test must be taken within three years of date of application. Thereafter new application and fee are required.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

William H. Bickel, President, Rochester, Minn.
George W. N. Eggers, Vice-president, Galveston, Tex.
Edwin F. Cave, Boston
S. Benjamin Fowler, Nashville, Tenn.
J. Vernon Luck, Los Angeles
John Royal Moore, Philadelphia
Harry D. Morris, New Orleans
Fred C. Reynolds, St. Louis
Sam W. Banks, Secretary-Treasurer, 116 S. Michigan Ave., Chicago 3

REQUIREMENTS FOR PART 1 EXAMINATION

1. Citizenship in the United States or Canada, or possession of papers showing intent to become a full citizen.
2. Graduation with a degree of Doctor of Medicine from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association or graduation from a foreign school on the list of institutions surveyed by the aforementioned Council at the time the application is received.

Note: Graduates of foreign medical schools not on the list of the Council who pass the examination of the Educational Council for Foreign Medical Graduates will be acceptable to the Board on the same basis as others possessing the degree of Doctor of Medicine as herein stated. Send inquiries to the Educational Council for Foreign Medical Graduates, 1710 Orrington Ave., Evanston, Ill. The Board will not accept completion of the examinations of the National Board of Medical Examiners in lieu of the examinations of the Educational Council for Foreign Medical Graduates.

After 1960 the list of approved foreign medical schools will be discontinued by the Council on Medical Education and Hospitals, and every foreign graduate will be required to pass the examination of the Educational Council.

3. Completion of an internship of not less than one year in a hospital approved at that time by the aforementioned Council, or if trained abroad, in institutions considered satisfactory by the American Board of Orthopaedic Surgery.

4. Completion, in addition to the above, of one year of resident training in general surgery in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

NOTE: This minimum year of training in general surgery may also be satisfied in one of the following alternate ways, subject to approval by the American Board of Orthopaedic Surgery, and can be accomplished at any time during the total period of residency training.

(*a*) A second year of surgical internship.

(*b*) Time spent in supervised research pertaining to orthopaedic surgery.

(*c*) Time spent on services which have overlapping interest with orthopaedic surgery.

(*d*) A fourth year of orthopaedic training, consisting of either 12 months of adult orthopaedic surgery or 6 months of such surgery and 6 months of fractures and related trauma.

(*e*) Surgical work in private practice—candidates will present a list of independent surgery prepared by the hospital record librarian and supplemented by letters from at least two colleagues evaluating their experiences.

(*f*) Surgical work in military service—credit is granted only after termination of military service and presentation of the Professional Training Record and letters from Chiefs of Services.

5. Two of the required three years of resident training in orthopaedic surgery under a program appoved by the Residency Review Committee. (See list of appoved services in the Internship and Residency Number of THE JOURNAL of the American Medical Association.)

FILING OF APPLICATION FOR PART 1 EXAMINATION

1. Application blanks for this examination are obtainable from the office of the Board. They must be returned to the office before November 30 of the year preceding the examination and must be accompained by the registration fee of $15, a nonrefundable fee.

2. The Committee on Eligibility is the sole arbiter in deciding whether the application is acceptable or not. Questions only as to rules and procedures may be answered by the Secretary.

3. Notification of acceptance is mailed to eligible applicants in February of the year of the examination.

4. A fee of $40 is payable on receipt of said notification. The fee is not refunded if the candidate fails to appear at the scheduled examination, unless in response to his written request the Committee on Eligibility rules otherwise.

5. An application which has been accepted by the Committee on Eligibility remains valid for three years, after which time a new application and fee are required.

6. The date and place of the scheduled examination are announced in THE JOURNAL of the American Medical Association and also in the Journal of Bone and Joint Surgery. The examination is usually held in April in three cities strategically located in the eastern, central, and western sections of the country.

SCOPE OF PART 1 EXAMINATION

The examination is in two parts—written and oral.

The written part covers such subject matter as: fundamental principles of surgery, elementary fractures and related trauma, orthopaedic surgery, history taking, physical diagnosis and also anatomy, pathology, and physiology and biochemistry, insofar as related to the Specialty.

The oral portion covers the following five subjects: (1) anatomy; (2) pathology; (3) physiology and biochemistry; (4) surgery, and (5) fractures, related trauma and orthopaedic surgery.

RESULTS OF PART 1 EXAMINATION

1. Notification of the results of the part 1 examination is mailed by the Secretary of the Board to both successful and unsuccessful candidates.

NOTE: No information respective to the results is obtainable prior to the date of said notification. Furthermore, no certificate is issued to successful candidates of part 1 examination, and no details as to the grading of integral parts of the examination are made available to either applicants or diplomates of the Board.

2. Successful candidates may make application to the Board for admission to the part 2 examination, as explained in Section VII.

3. Unsuccessful applicants may repeat the part 1 examination in each of the two ensuing years, as necessary, and may do so without additional training requirements or the filing of a new application. They are, moreover, automatically reconsidered for examination by the Committee on Eligibility during the additional two years their application remains valid.

4. On receipt of the Committee's approval of his eligibility to repeat the examination, the applicant must pay to the Board the fee of $40.

5. After the third and subsequent failures to pass the part 1 examination, the Committee on Eligibility may require the unsuccessful candidate to obtain the equivalent experience of one year of residency training acceptable to the Committee. A new application with a fee of $15 must then be submitted for each additional examination, and this must, in turn, be followed by payment to the Board of the fee of $40 on receipt of notification from the Committee.

REQUIREMENTS FOR PART 2 EXAMINATION

NOTE: Successful completion of the part 1 examination does not automatically enjoin the Board to declare the candidate eligible for the part 2 examination. Certain additional requirements as well as the approval of the Committee on Eligibility are requisite.

1. Part 2 examination must be taken within the five-year period following completion of the part 1 examination. After this lapse of time it will be necessary to take the part 1 examination over again before eligibility for the part 2 examination can be considered. In some cases the Committee on Eligibility may extend this time beyond five years because of problems presented by service in the military forces.

2. The FORMAL REQUIREMENTS leading to either "full" or "limited"* Certification by the Board are as follows:

(*a*) Full citizenship in the United States or Canada.

(*b*) License to practice medicine in the United States or Canada.

(*c*) High ethical and professional standards and satisfactory moral standing in the community.

3. TRAINING REQUIREMENTS.—The requirements for "Full Certification" (including the training completed prior to part 1 examination) are as follows:

(*a*) One year of general surgery or its equivalent.

(*b*) One year of adult orthopaedic surgery.

(*c*) Six months of fractures and related trauma.

(*d*) Six months of basic science training.

(*e*) One year of children's orthopaedic surgery.

---

*Training leading to Limited Certification will be discontinued after Jan. 1, 1962.

NOTE: The training requirements for "Limited Certification" are identical with those for "full certification" except for the one year devoted to children's orthopaedic surgery. In its stead there is in addition to the above requirements—items 3a through 3d—a choice between the following two alternatives:

(*a*) Twelve months of training in adult orthopaedic surgery, or

(*b*) Six months of training in adult orthopaedic surgery and six months in fractures and related trauma.

PRACTICE REQUIREMENTS

These are:

(*a*) All practice requirements must be satisfied after completion of the formal training requirements.

(*b*) Practice must be limited to orthopaedic surgery for two years, except as other therapy may be required in the care of patients on emergency services.

(*c*) Candidates in private practice must spend 14 of the 24 months immediately prior to application for the part 2 examination in one locality to permit the Committee on Eligibility to evaluate the candidate's competence in practice.

(*d*) A candidate employed full time in institutions may satisfy practice requirements by serving a minimum of two years. The minimum requirement of two years of practice limited to orthopaedic surgery cannot be satisfied by mixing full time institutional work with preceding or subsequent time in private practice unless the Committee on Eligibility rules otherwise.

FILING OF APPLICATION FOR PART 2 EXAMINATION

1. Applications for admission to the part 2 examination must be received in the office of the Secretary of the American Board of Orthopaedic Surgery before August 15 of the year preceding the examination. Each application must be accompanied by payment of the nonrefundable fee of $15.
2. An application remains valid for three years, after which time a new application and fee must be submitted.
3. On notification from the Committee on Eligibility of approval of the candidate's application, a fee of $75.00 must be paid to the Board. The notification is mailed out by the Secretary during the month of November preceding the part 2 examination.
4. Failure to appear for the scheduled examination entails forfeiture of the fee unless upon written request from the candidate the Committee rules otherwise.

SCOPE OF PART 2 EXAMINATION

1. The examination consists of two parts—written and oral.
2. The written part covers advanced work in all phases of orthopaedic surgery and trauma related to the muscular skeletal system in which the candidate has been trained.
3. The oral portion covers the following five items: (1) anatomy; (2) pathology; (3) children's orthopaedic surgery; (4) fractures and related trauma, and (5) adult orthopaedic surgery.

NOTE: Candidates for "limited certification" will not be examined in children's orthopaedic surgery, but will be tested personally in adult orthopaedic surgery and fractures and related trauma by two different groups of examiners.

RESULTS OF PART 2 EXAMINATION

A.—Successful Candidates

1. Candidates who have successfully passed the part 2 examination and who are otherwise acceptable to the Board on the basis of full requirements, receive appropriately a "full" or a "limited" certificate, stating that they have been found qualified to practice the Specialty of Orthopaedic Surgery in those fields in which they have been trained and examined.
2. Candidates who obtain "limited certification" are expected to delete children's orthopaedic surgery from their practice because of lack of approved training. They may subsequently become fully certified by completing one year of approved resident training in children's orthopaedic surgery and passing the Board examination in that field. A practice period of one year should intervene between the completion of the additional training and the examination. The examination fee is $25.00.

B.—Unsuccessful Candidates

1. Candidates unsuccessful in the part 2 examination are so informed by the Secretary. The grades received on integral parts of the examination are not revealed either to the candidate or to diplomates of the Board.
2. Candidates who fail one oral examination or the written examination will be required to repeat this portion of the examination within three years upon payment of a fee of $25.
3. Candidates who fail two oral interviews or one oral and the written test must repeat the entire examination as described in paragraph four.
4. The examination may be repeated on two subsequent occasions without requirement for further training or the filing of a new application. The eligibility of the candidate for reexamination receives automatic consideration from the Committee, and the results will be made known to him. On notification of his approval by the Committee on Eligibility, payment of the fee of $75 must be made to the Board.
5. After a third or subsequent failure to pass part 2 examination, the candidate may apply to the Committee on Eligibility for permission to repeat the examination. The Committee may require the candidate to gain additional experience equivalent to one year of resident training. A new application and fee of $15 must be submitted for each additional examination and this must be followed by payment to the Board of the fee of $75 on receipt of Committee approval of the candidate's eligibility.

MILITARY SERVICE

1. Medical officers who have elected service in the military forces as their life career compete for certification on the same basis as do doctors in civilian practice; that is, they must satisfy the practice requirements by military assignments in which their duties are limited to the practice of orthopaedic surgery.
2. Medical officers on temporary or permanent status with the armed services who serve in military hospitals approved by the Residency Review Committee, obtain credit on the same basis as do residents on approved services in civilian hospitals.
3. Applicants who serve in military hospitals not approved by the Council for resident orthopaedic training, but whose experience is judged by the Board to have been equal to that obtained on the approved orthopaedic programs, may be granted the maximum credit of one year of resident orthopaedic training.
4. Applicants requesting such credit must submit completed "Professional Training Records" in addition to lists of operations performed by them, and letters from Chiefs of Services with evaluations of their experience.
5. Medical officers assigned to residency programs in civilian institutions on the approved list for orthopaedic training receive the same credit as do civilian candidates.

RECORDS OF SURGICAL CASES AND INSPECTIONS

1. Records of a specified number of consecutive surgical cases may be requested by the Board in order to evaluate properly the work of an applicant.
2. A representative of the Board may visit a community in order to evaluate properly the work of an applicant.

APPROVED RESIDENCIES

1. Training in the United States must be taken in institutions approved for resident training in orthopaedic surgery by the Residency Review Committee. The latter is made up of representatives of the Council on Medical Education and Hospitals of the American Medical Association and the American Board of Orthopaedic Surgery.

A complete list of approved institutions is published annually in the Internship and Residency Number of THE JOURNAL of the American Medical Association. The list is not obtainable from the office of the Board.

2. The integral parts of approved residencies are designated in the list by the following symbols: A—Adult Orthopaedic Surgery; C—Children's Orthopaedic Surgery; F—Fracture Surgery and related Trauma. Training in the basic sciences is given either as an integral part of these services or as a separate course. The length of training in various approved institutions is also indicated.

3. Candidates electing an additional year of training in adult orthopaedic surgery and surgery of fractures and related trauma in lieu of a year of children's orthopaedic surgery for the "limited certificate" may satisfy requirements by continuing their training in institutions approved for adult orthopaedic surgery, or adult orthopaedic surgery and fractures and related trauma.

4. Credit for time spent in institutional resident training will be granted only for the period the institutions are on the approved list. Credit may be given from the start of the resident training period if the institution becomes approved during the time the candidate is in training and the program is found to be satisfactory.

5. Candidates engaged in resident training in institutions which become disapproved in whole or in part receive resident training credit for the entire period during which their contracts are in force.

6. The term "fellow" is considered synonymous with "resident" only if the position occupied and the work performed by the former are in all respects equal to those of the latter. The total number of residents and fellows performing resident training for credit must not exceed the number approved by the Residency Review Committee for a given program.

7. Institutions approved for resident training in orthopaedic surgery by the Residency Review Committee may utilize the training facilities of institutions not individually approved for resident training by the aforementioned Committee, provided that:

(*a*) The resident spends at least half of the minimum time required in each category of training in institutions approved for that type of training by the Council.

(*b*) The training supplements services in the same categories in which the institutions responsible for the training are approved.

(*c*) Whenever the supplemental service is used for six months of training, the program is inspected and is subject to approval by the Residency Review Committee.

NOTE: Services thus approved may request that they be included under the appropriate training program in the official list of residencies of the Council on Medical Education and Hospitals of the American Medical Association. Services giving five months or less of training are subject to approval but not necessarily inspection by the Residency Review Committee; they are not included in the official list of residencies of the Council.

(*d*) A maximum of three months is spent on services devoted to rehabilitation.

REQUIREMENTS OF INSTITUTIONS OFFERING ORTHOPAEDIC TRAINING

1. Institutions approved for full three-year programs and including all parts of the training requirements may integrate all parts so that they may be given concurrently.

2. Institutions now approved for less than three years of resident orthopaedic training must make cooperative arrangements with other approved institutions so as to provide complete three-year programs for all of the residents by January, 1962.

3. The minimum requirements of resident orthopaedic training programs are as follows:

(*a*) One year of training in adult orthopaedic surgery.

(*b*) Six months of training in the basic sciences.

(*c*) Six months of training in fractures and related trauma.

(*d*) One year of training in children's orthopaedic surgery if "Full Certification" is the aim, or else a second year of adult orthopaedic training in surgery, fractures, and related trauma if "limited certification" is elected.

(To be discontinued after January 1, 1962.)

4. Candidates who take an additional year of training in adult orthopaedic surgery and fracture surgery in place of a year of children's orthopaedic surgery may satisfy the requirements by devoting the additional year either solely to training in adult orthopaedic surgery or by taking six months of adult orthopaedic surgery and six months of fractures and related trauma. But the entire year must not be devoted solely to training in fractures and related trauma.

5. Training in adult and children's orthopaedic surgery must include observation and first-hand experience in diagnosis, treatment, and operative and postoperative care of orthopaedic problems.

6. Training in fracture surgery and related trauma must similarly include observation and first-hand experience in diagnosis, conservative and operative treatment, and postoperative care of recent and old fractures as well as other forms of related trauma.

7. Training in the basic sciences must instill a sound knowledge of anatomy, pathology, physiology, bacteriology and biochemistry, insofar as these relate to orthopaedic surgery.

8. Candidates may complete the residency requirements by training in several approved institutions, provided that all of the aforementioned requirements are satisfied.

9. No training period of less than six consecutive months in one institution may be credited toward resident training requirements, except as noted in Section XIV-7c.

10. Candidates in resident training may not engage in private practice of their own or receive credit for time spent in private office practice of others.

ADDENDUM TO THE RULES OF THE AMERICAN BOARD OF ORTHOPAEDIC SURGERY

Training on Hand Services:

Six months of credit may be granted toward adult orthopaedic surgery for time spent on full time Hand Services as they pertain to orthopaedic surgery in approved hospitals. The Residency Review Committee is also empowered to approve for training certain hand services on which residents are not necessarily full time in an approved hospital.

Canadian Applicants:

Candidates trained in Canada or elsewhere except in the United States and practicing in Canada are required to pass the qualifying examination in Canada before they can apply for the examination of the American Board of Orthopaedic Surgery.

Eligibility for Examinations of Foreign Graduates with Approved Residency Training in Orthopaedic Surgery Who Do Not Hold Citizenship in the United States or Canada:

Foreign doctors who complete approved training in Orthopaedic Surgery in the United States and who return to their own countries to practice, may take the examinations of the American Board of Orthopaedic Surgery under specific rules and regulations. For further information, write to the Secretary of the Board.

Candidates for Part II Examinations:

Each application must be accompanied by an unbound list of all of his patients admitted to the hospitals in which he has practiced for the year immediately preceding the execution of his application form, or the year just prior to the reopening of his application. Rules Pertaining to the Sequence of Examinations (To Become Effective as of 1962):

Part I examination must be taken within three years after the completion of training unless there is a reason acceptable to the Committee on Eligibility, or candidate will be required to take an additional year of training on an approved residency program to qualify.

Candidates must repeat Part I examination after failure within a three year period unless there is a reason acceptable by the Committee on Eligibility, or they will be required to take an additional year of training on an approved residency program to qualify.

Candidates must repeat Part II after failure within a three year period unless there is a reason acceptable by the Committee on Eligibility, or they will have to repeat Part I examinations.

AMERICAN BOARD OF OTOLARYNGOLOGY

Gordon D. Hoople, President, Syracuse, N. Y.
Bernard J. McMahon, Vice-president, St. Louis
Lawrence R. Boies, Minneapolis
Louis H. Clerf, St. Petersburg, Fla.
Daniel S. Cunning, New York City
Russell M. Decker, Pasadena, Calif.
David D. DeWeese, Portland, Ore.
Lyman H. Heine, Fremont, Neb.
Frederick T. Hill, Waterville, Me.
William C. Huffman, Iowa City, Ia.
Clair M. Kos, Iowa City, Ia.
Francis L. Lederer, Chicago
Francis E. LeJeune, New Orleans
John R. Lindsay, Chicago
William J. McNally, Montreal, Canada
James H. Maxwell, Ann Arbor, Mich.
Philip E. Meltzer, Boston
Werner Mueller, Boston
C. Stewart Nash, Rochester, N. Y.
George F. Reed, Boston
LeRoy A. Schall, Boston
Harry P. Schenck, Philadelphia
O. E. Van Alyea, Chicago
Walter P. Work, San Francisco
Dean M. Lierle, Secretary-Treasurer, University Hospital, Iowa City, Ia.

GENERAL REQUIREMENTS

The following general qualifications of candidates for examination are required by the Board:

1. A candidate shall possess moral, ethical and professional qualifications acceptable to the Board.

2. A candidate shall have been graduated five years or more from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association or the Canadian Medical Association.

3. A candidate must have had an internship of at least one year approved by the Council on Medical Education and Hospitals of the American Medical Association or the Canadian Medical Association.

4. A candidate from the United States or Canada must be a member of the American Medical Association or the Canadian Medical Association and their constituent local medical societies.

5. A candidate who has received his pre-medical or medical instruction outside of the United States or Canada shall present documented evidence of this instruction.

6. A candidate from a country outside the United States or Canada who has received acceptable foreign pre-medical and medical training and who has served an approved residency in Otolaryngology in the United States or Canada is eligible for examination provided he meets all other requirements of the Board.

7. A candidate who has received his pre-medical, medical and residency training outside the United States or Canada will be considered on an individual basis by the Board.

SPECIAL MINIMAL REQUIREMENTS

Four years of post graduate training in addition to the internship. This period must include:

1. One year in an approved residency in general surgery.
2. Three years in an approved residency in Otolaryngology.

It is understood that the candidate must have preparation in the fundamentals of the basic sciences—anatomy, biochemistry, embryology, microbiology, pathology and physiology—especially as they relate to Otolaryngology.

The Board would emphasize the fact that the above are minimal requirements for certification and as a foundation for further development in the broad field of Otolaryngology.

A candidate may be examined at the conclusion of his training without time spent in practice.

In exceptional circumstances certain candidates who do not meet all the prescribed general or special requirements may be accepted for examination but only by special action of the Board.

At the discretion of the Board, a limited certificate may be issued to one who practices one branch of the specialty exclusively.

APPLICATION AND FEES

1. A candidate for examination shall complete and submit the application forms supplied by the Secretary of the Board. It shall contain a record of the following: pre-medical and medical training, internships, residencies, and other postgraduate study, hospital and dispensary appointments, teaching positions, service in the armed forces, membership in medical societies, list of personal publications, if any, and any additional information considered of value to the Board's consideration of his qualifications.

The application shall be signed by two Diplomates of the American Board of Otolaryngology. It shall be accompanied by (a) two unmounted, autographed and recent, dated, 4" x 3½" photographs, (b) three letters of endorsement from responsible citizens, (c) a list of operations and assists performed by the candidate during his residency training (d) verification of training and (e) the application fee.

The application shall be filed with the Secretary not less than nine months prior to the probable date of the examination with the exception of the list of operations which must be submitted three months prior to the termination of the residency.

2. An accepted application remains active for three years. If a candidate fails to appear for examination within three years, the application fee is forfeited and re-application will be necessary.

3. The Board reserves the right to reject any application and such action shall not require explanation by the Board.

4. No statement indicating a prospective candidate's eligibility for examination by the Board can be given until after formal application is made.

5. The fee for the examination is $150. Of this sum $75 must accompany the application. No part of this $75 is returnable. No application will be acted upon until the $75 application fee is received. The remaining $75 of the fee of $150 must be paid to the Secretary immediately upon notification of acceptance for examination. No part of this second $75 is returnable once the candidate has been accepted for examination. A re-examination fee of $150 is required of candidates who request re-examination.

EXAMINATION

The time and place of the examination will be determined by the Board. Advance notices of examinations are published in the Journal of the American Medical Association and certain journals devoted to the specialty of Otolaryngology. Insofar as is possible examinations will be held at or near the time and place of the annual meetings of the American Academy of Ophthalmology and Otolaryngology and/or of the senior Ear, Nose and Throat Societies. Time allotted for these examinations is from three to five days.

The examination encompasses all phases of Otolaryngology including peroral endoscopy, maxillofacial surgery, and surgery of the neck (excluding the thyroid gland), and includes the following sections:

1. Oral examinations covering all phases of Otolaryngology.
2. Basic sciences as applied to Otolaryngology.
3. Gross pathology and histopathology.
4. Clinical examinations of patients (history taking, physical examination, observation, functional tests, laboratory and x-ray data, a discussion of differential diagnosis, etc.).

Unless otherwise specified all examinations will be conducted orally.

AMERICAN BOARD OF PATHOLOGY

James W. Kernohan, President, Rochester, Minn.
William B. Wartman, Vice-president, Chicago
John J. Andujar, Fort Worth, Texas
Roger D. Baker, Durham, N. C.
Israel Davidsohn, Chicago
Arthur T. Hertig, Boston
Douglas A. MacFayden, Bloomington, Ind.
Alan R. Moritz, Cleveland
James N. Patterson, Tampa, Fla.
S. Brandt Rose, Philadelphia
John R. Schenken, Omaha
Edward B. Smith, Secretary-Treasurer, Indiana University Medical Center, 1100 W. Michigan St., Indianapolis 7, Ind.

GENERAL REQUIREMENTS

1. Satisfactory moral and ethical standing in the profession.
2. License to practice medicine or a certificate of the National Board of Medical Examiners.
3. The applicant must devote his time primarily and principally to the practice of pathology.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from medical schools in other countries acceptable to the board.

SPECIAL TRAINING AND EXPERIENCE

1. The board admits candidates to examinations who are otherwise eligible and who have had either of two following types of training and experience.

(*a*) After five years, if four of the five years have been in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board; or

(*b*) After 11 years if none of the training and experience has been in institutions so approved.

2. The specific requirements for those acceptable after five years are as follows:

(*a*) Pathology anatomy only.

(1) Four years of supervised study and training in an institution approved for residency training in pathological anatomy by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or fellow or assistant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. In addition, time, not to exceed 12 months, spent in a department of pathology of an approved school of medicine after the completion of the second year of undergraduate study may be counted for full credit toward the four years.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of pathological anatomy in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(*b*) Clinical pathology only.

(1) Four years of supervised study and training in an institution approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or of fellow or assistant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship, in any of the preclinical departments of a university, for one of the four years. Candidates holding also a master's or doctor's degree in a special field of clinical pathology (bacteriology, immunology, chemistry, parasitology, or hematology) may obtain time credit for not more than 12 to 24 months toward the four years for this work, regardless of whether it was taken before or after the medical degree. The evaluation of time credit will depend on how much of the broad field of clinical pathology was covered in the graduate work.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of clinical pathology in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(*c*) Pathological anatomy and clinical pathology.

(1) Four years of supervised study and training divided as follows: (*a*) two years of supervised study and training in pathological anatomy as outlined in the preceding paragraph 2-(*a*)-(1), (*b*) Two years of supervised study and training in clinical pathology as outlined in the preceding paragraph 2-(*b*)-(1). Candidates declared eligible before July 1, 1953, may, at their own election, substitute one year (twelve months) of a straight or rotating clinical internship for one year of this special training in clinical pathology. After July 1, 1953, all candidates applying for both pathological anatomy and clinical pathology will be required to have two years of supervised training in clinical pathology.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of both pathological anatomy and clinical pathology in a hospital approved by the American Medical Association or other institutions acceptable to the board. After July 1, 1953, candidates who elect to claim credit for one year for a clinical internship must take this fifth year as supervised study and training in clinical pathology in institutions approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. Candidates declared eligible after July 1, 1953, who do not take a clinical internship, may after four years of training as outlined in 2-(1)-(*a*) and (*b*), spend the fifth year in independent practice in an institution or laboratory acceptable to the board.

Note: As outlined in the preceding paragraphs, the total time requirements of the board are unchanged after July 1, 1953, namely, five years of study or practice after graduation from medical school, with exceptions noted in sections 2-(*a*)-(1) and 2-(*b*)-(1).

3. The specific requirements for those acceptable after 11 years are as follows: (*a*) The practice of pathology under circumstances acceptable to the board for a period of not less than 11 years. At the election of the candidates, a period

not to exceed one year of straight or rotating clinical internship may be substituted for one of the 11 years. For those candidates in this category who have had some special study and training in pathologic anatomy or clinical pathology acceptable supervised study and training, only seven years of practice are required.

CREDIT FOR MILITARY SERVICES

Credit may be allowed for training and experience in pathology in the federal services during the period July 1, 1940, to June 30, 1947. This credit for training or experience or both is given on an individual basis and will depend on the opportunity the applicant has had, as indicated by his or her medical service record in the specialty of pathology.

After July 1, 1947, credit for those military services will be given on the same basis as it is in civilian institutions, except that the rule in the preceding paragraph will not apply to reserve officers who continue on active duty or are called to active duty after that date.

SPECIAL FIELDS OF PATHOLOGY, CLINICAL CHEMISTRY, CLINICAL MICROBIOLOGY, HEMATOLOGY, NEUROPATHOLOGY (IN FORCE AFTER JULY 1, 1954) AND FORENSIC PATHOLOGY (IN FORCE AFTER JULY 1, 1964)

The trustees of the American Board of Pathology have adopted the following requirements for certification in special fields of pathology, effective July 1, 1954.

Candidates who have met all general requirements and have had special training and experience that is acceptable to the board in a special field of pathological anatomy or clinical pathology may apply to the board for certification in that special field. The board, at its discretion, may approve this application, and, after the candidate has successfully passed a prescribed examination or has fulfilled certain special qualifications (see below, section D), will issue a certificate designating the special field.

A. General Qualifications:

1. Satisfactory moral and ethical standing in the profession.

2. License to practice medicine or a certificate of the National Board of Medical Examiners.

3. The applicant must devote his time primarily and principally to the practice of pathology or the special field of pathology in which he is requesting certification.

B. Professional Education:

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association or graduation from a medical school in other countries acceptable to the board.

C. Special Training and Experience:

The board admits candidates to examination in special fields of pathology who are otherwise eligible and who have had either of the following types of training.

1. Applicants already holding a certificate of the board in clinical pathology or the combined certificate in pathological anatomy and clinical pathology (for qualification in clinical chemistry, clinical microbiology, and hematology), or in pathological anatomy (for qualification in neuropathology)—two additional years of supervised training in the special field of their choice in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board.

Certification in pathologic anatomy (either pathologic anatomy only, or pathologic anatomy and clinical pathology) is a prerequisite for admission to the examination for certification in the special field of forensic pathology. A candidate who is certified in pathologic anatomy may be eligible to apply for examination in forensic pathology if he presents evidence of an additional 12 months of approved full-time training in forensic pathology.

2. Applicants not holding a certificate in pathological anatomy or clinical pathology—five years of training in the special field of their choice, provided four of the five years Education and Hospitals of the American Medical Association or by the board. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. The fifth year may be a continuation of supervised training or may be independent practice of the particular specialty in a hospital approved by the American Medical Association or in other institutions acceptable to the board.

The above paragraph does not apply to forensic pathology. For further details, write to the Secretary of the Board.

D. Special Qualifications-Certification Without Examination:

Prior to Jan. 1, 1960, (July 1, 1964, for forensic pathology) the Board at its discretion may certify candidates without examination if the following conditions have been met as of January 1, 1955 (July 1, 1959, for forensic pathology):

1. That the candidate has been for a period of five years of professorial rank in the special field of his choice and in an approved medical school, or

2. For forensic pathology—that the candidate has been practicing forensic pathology as a recognized expert in the field for a period of ten years, and holds a certificate from the American Board of Pathology in pathologic anatomy, or in pathologic anatomy and clinical pathology, or, under special circumstances, in clinical pathology.

APPLICATION BLANK AND FEE

Application must be made on the special form that may be procured from the secretary and forwarded with other required credentials and the application fee. An application cannot be given consideration by the board unless it is accompanied by the application fee.

The application or examination fee for candidates is $100. If the candidate fails in his examination he will be admitted to a second examination after one year. The applicant must pay an additional fee of $50 before a second examination will be given.

The application fee of $100 has been determined after careful consideration and is based on actual estimates of the expense of examination and administration. None of the board members receives any compensation for his services except actual expenses incurred.

If the applicant, for any reason, is deemed ineligible for examination by the board, his fee will be returned; however, the application fee is not returnable after the candidate has officially been accepted for examination and notified to report for the examination.

EXAMINATIONS

Examinations will be held at the discretion of the Board.

The examinations are to be based on the broad principles of pathology with emphasis on diagnosis, interpretation, and technique. The applicant may apply for certification in pathologic anatomy only, clinical pathology only, pathologic anatomy and clinical pathology, or a special field.

The examinations in pathological anatomy consist of a written test, an oral examination on gross pathology, and a practical examination in microscopic pathology. The examination in clinical pathology consists of a written test and an oral and practical examination in the six phases of clinical pathology: bacteriology, hematology, clinical chemistry, parasitology, immunology, and clinical microscopy.

DEFINITIONS

1. Pathological anatomy is that branch of pathology that deals with the morphological aspects of disease, recognition being given that that definition covers two phases of pathology: (*a*) the applied phase with special attention to the description and diagnosis of gross and microscopic specimens, (*b*) the academic phases of teaching and general morphological diagnosis.

2. Clinical pathology is that branch of pathology that deals with bacteriology, immunology, clinical chemistry, parasitology, hematology, endocrinology, clinical microscopy, and the application of the physical and biological sciences to the diagnosis, prognosis, and treatment of disease.

CRITERIA FOR APPROVAL OF INSTITUTIONS FOR TRAINING IN PATHOLOGY

In Sections C-2-a, C-2-b, and C-2-c of the General Requirements, it is stated that candidates must have certain periods of supervised study and training. The American Board of Pathology, in cooperation with the Council on Medical Education and Hospitals of the American Medical Association, certifies hospitals in the United States as satisfactory for this supervised study and training. Lists of these hospitals are published in the Internship and Residency Number of THE JOURNAL of the American Medical Association each year. In addition, the American Board of Pathology recognizes certain hospitals outside the United States and certain laboratories not connected with hospitals in the United States. Inquiries concerning these should be directed to the secretary of the board.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and in the associates and assistants, the supervision of work of the person in training, the excellence of the educational program, and the exactness and completeness of the laboratory work performed. On the score of quantity, consideration is given to the volume and distribution of laboratory work, both in absolute numbers and in relation to the size of the hospital, to the diversity and completeness of test performed, to the size and equipment of the laboratory, and to the number of professional and nonprofessional personnel in relation to the volume of work.

In general, the qualitative standards will determine whether or not a hospital or laboratory is approved and the quantitative standards will determine whether the approval is for one, two, three, or four years of credit toward the requirements of the board.

In evaluation of applications the board takes into consideration the following criteria:

1. Director of laboratories or pathologist:

(*a*) It is required that the responsible head of the laboratory hold the certificate of the American Board of Pathology in the subject for which the hospital is approved, or be eligible for certification, and that he or she spend full time in the hospital. Full time is not interpreted in terms of hours, but rather that the director have no obligation outside the one approved hospital except in a university department of pathology in which he and the residents have an opportunity to participate in the educational program;

(*b*) In special instances, the equivalent of full time by two or more qualified persons will be accepted, and one person need not spend the entire working day in the laboratory;

(*c*) In special instances, two or more hospitals will be approved as a unit with a single full-time director of laboratories, if it is apparent that a satisfactory training program can be conducted;

(*d*) *In hospitals with over 350 beds, it is expected that* the professional staff, in addition to the pathologist, will include one or more persons with special training and qualifications in the subspecialities of clinical pathology.

2. Technicians:

There are no absolute criteria, but it is expected that the number of technicians will be proportional to the volume of laboratory work and that, insofar as possible, the technicians will hold the certificate of the Registry of Medical Technologists of the American Society of Clinical Pathologists.

3. Floor space of laboratory:

In general, it is believed that the size of the laboratory should be related to the size of the hospital and the volume of laboratory work. A minimal ratio is 4 sq. ft. of space in the laboratory, including morgue and autopsy room, for each bed in the hospital.

4. Equipment for the laboratory:

The variety and completeness of laboratory tests performed depend on the size of the hospital. In all hospitals there should be facilities for the more common tests in clinical pathology, for study of surgical specimens, and for performance of autopsies. In larger hospitals, the variety of tests performed should be larger, and in hospitals with over 500 beds all recognized laboratory procedures should be available for study and treatment of the patient.

5. Autopsy percentage:

No institution with a percentage of less than 15 will be approved, and those institutions with percentages between 15 and 40 will be given special scrutiny.

6. Examination of surgical specimens:

All surgical specimens should be sent to the laboratory for gross examination, and microscopic examinations should be made unless there are general or special reasons not to do so.

7. Indices:

There should be indices according to the names of the patients and the diagnoses of all surgical and autopsy material. Indices of clinical pathology are left to the discretion of the hospital.

8. Museum:

There should be available fixed anatomic and pathological specimens for study by the staff in proportion to the size of the hospital. Properly filed and indexed color photographs may in part be substituted for museum specimens.

9. Library:

A reasonably complete library of modern books and recent unbound and bound journals should be available to the hospital, and the more commonly used books and journals should be on hand in the laboratory.

10. Education program:

The work of the person in training should be supervised. Conferences, seminars, journal clubs, and demonstrations should be conducted as frequently as the volume of material and the size of the staff justifies. A clinicopathological conference must be held at least every two weeks.

11. Volume of laboratory work:

(*a*) As indicated in the following categories, no hospitals with less than 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology annually will be approved (Category D), except as outlined in the following paragraphs. It is the belief of the board that less material than this is inadequate for the training of a pathologist.

(*b*) In the field of clinical pathology, there should be a reasonable diversification of tests, and in each category there should be sufficient absolute volume to provide training and experience. There are no absolute criteria, but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

(*c*) In the field of pathological anatomy, a deficiency in either autopsies or surgical specimens may be made up by an excess of the other, if the deficiency does not exceed 20% of the minimum required in the ratio of one autopsy to 75 surgical specimens. Thus, in a hospital approved for one year in pathological anatomy and clinical pathology, the minimums are 75 autopsies and 1,000 surgical specimens. If a hospital has 2,500 surgical specimens, it is acceptable if there are only 60 autopsies.

If a hospital has met these minimal qualitative and quantitative standards, it will then, on the basis of the following quantitative standards, be approved for one, two, three, or four years of training in pathological anatomy, or clinical pathology, or both, or some special field as shown for the number of residents indicated.

CATEGORY A. In both pathological anatomy and clinical pathology for four years (as required of all candidates seeking certification in both fields who are examined after July 1, 1952).

Minimum: 150 autopsies, 1,750 surgical specimens, and 65,000 tests in clinical pathology for four residents. Additional resident for each 50 autopsies or 500 surgical specimens or 20,000 tests in clinical pathology.

CATEGORY B. In both pathological anatomy and clinical pathology for three years. This meets all requirements of the board for supervised training until July 1, 1952. Candidates examined after that date who seek certification in both subjects must take an additional year of supervised training in clinical pathology or pathological anatomy in another hospital that is approved for the deficiency of training required.

Minimum: 125 autopsies, 1,500 surgical specimens, and 50,000 tests in clinical pathology for three residents. Additional resident for each: 50 autopsies, 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY C. In both pathological anatomy and clinical pathology for two years. Candidates taking two years in these institutions must have an additional year (two years after July 1, 1952) in an institution in category A, B, or D.

Minimum: 100 autopsies, 1,250 surgical specimens, and 40,000 tests in clinical pathology for two residents. Additional resident for each 50 autopsies, or 500 surgical specimens or 20,000 tests in clinical pathology.

CATEGORY D. In both pathological anatomy and clinical pathology for one year. Candidates taking training in these institutions must have an additional two years (three years after July 1, 1952) in institutions that are approved for the deficiency of training required.

Minimum: 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology for one resident. Additional resident for each 50 autopsies, or 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY E. In pathological anatomy only, for three or more years. Candidates taking all training in these institutions will not be eligible for certification in clinical pathology unless an additional year (two years after July 1, 1952) is taken in clinical pathology in institutions that are approved for the deficiency of training required.

Minimum: 175 autopsies and 1,500 surgical specimens for three residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY F. In pathological anatomy only, for two years. Candidates taking training in these institutions will not be eligible for certification in clinical pathology unless they take one additional year full time in clinical pathology (two years after July 1, 1952) in institutions that are approved for the deficiency of training required, and will be eligible in pathological anatomy only if another year is taken in another institution that is approved for one or more years in pathological anatomy.

Minimum: 125 autopsies and 1,250 surgical specimens for two residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY G. In pathological anatomy only, for one year. Candidates training in these institutions will not be eligible in both pathological anatomy and clinical pathology unless they take an additional year in pathological anatomy and an additional year (two years after July 1, 1952) in institutions that are approved for these periods of training. Candidates seeking certification in pathological anatomy only must study an additional two years in institutions that are approved for that period of training.

Minimum: 75 autopsies and 1,000 surgical specimens for one resident. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY H. For postmortem part of pathological anatomy for two years. Credit is never allowed for more than two years. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional year in an institution in Category A, B, C, E, F, or G with assignment to surgical pathology principally. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology and one-half year assigned to surgical pathology principally, in an institution in Category A, B, C, or J.

Minimum: 125 autopsies for two residents. An additional resident for each 60 autopsies.

CATEGORY I. For postmortem part of pathological anatomy for one year. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional two years in an institution in Category A, B, C, E, F, or G with general assignments. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology; and one year to an institution in Category A, B, C, E, F, or G.

Minimum: 75 autopsies for one resident.

CATEGORY J. Surgical pathology part of pathological anatomy for one year. Credit is never allowed for more than one year, and the director of the laboratory must hold the certificate of the American Board of Pathology in pathological anatomy or be eligible for certification. Candidates training in these institutions may pursue further training as follows: (1) For Pathological Anatomy only. An additional two years in an institution in Category H or in an institution in Category A, B, or C with assignment to postmortem pathology only. (2) For Pathological Anatomy and Clinical Pathology an additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology full time, and an additional year to an institution in Category A, B, D, E, F, G, or H with assignment to postmortem pathology full time.

Minimum: 2,000 surgical specimens for one resident. An additional resident for each 1,000 surgical specimens.

CATEGORY K. Special pathology as part of pathological anatomy. Credit for not to exceed one-fourth the time credit (one year if seeking certification in pathological anatomy only, six months if seeking both pathological anatomy and clinical pathology) of candidates applying in pathological anatomy may be taken in special laboratories with limited activities such as neuropathology, orthopedic pathology, ophthalmic pathology, etc. The candidate who receives credit in this category may, on request, have the field of special pathology designated on the certificate of the board.

CATEGORY L. Clinical pathology for three or more years. Candidates taking three years of training in these institutions will not be eligible for pathological anatomy unless they take an additional two years in institutions approved for pathological anatomy.

Minimum: 100,000 tests in clinical pathology for three residents. Additional resident for each 50,000 tests.

CATEGORY M. Clinical pathology for two years. Candidates taking two years training in these institutions must take the same additional training as in Category L to be eligible for pathological anatomy also. To be eligible for clinical pathology only, an additional year of clinical pathology must be taken in an approved institution.

Minimum: 75,000 tests in clinical pathology for two residents. An additional resident for each 50,000 tests.

CATEGORY N. Clinical pathology for one year. Candidates taking training in those institutions must take an additional two years in an institution in Category A, B, C, L, or M assigned to clinical pathology for eligibility in clinical pathology only. To be eligible in pathological anatomy and clinical pathology, an additional two years in approved institutions is required.

Minimum: 50,000 tests in clinical pathology for one resident.

CATEGORY O. Special clinical pathology as part of clinical pathology. Candidates applying for clinical pathology only may receive credit for not in excess of one-quarter of the training period (one year if seeking certification in clinical pathology only, six months if seeking both pathological anatomy and clinical pathology) for work in a special field of clinical pathology, such as bacteriology, immunology, etc. Under these circumstances, one request, the special field will be designated on the certificate of the board.

CATEGORY P. Research: Residence in certain institutions in which full time is devoted to research with a direct application to the practice of pathological anatomy or clinical pathology may be accepted for credit not to exceed one-third the time requirement (20 months if no clinical internship, 16 months if a clinical internship was taken). The board encourages research and believes that all candidates should carry on investigation during their training in all institutions. Therefore, this category is only for those wishing to do full time research.

AMERICAN BOARD OF PEDIATRICS

Lee F. Hill, President, Des Moines
James Marvin Baty, Vice-president, Boston
Robert B. Lawson, Secretary-Treasurer, Miami
John A. Bigler, Chicago
Crawford Bost, San Francisco
Arild E. Hansen, Oakland, Calif.
J. A. Johnston, Detroit
Ralph V. Platou, New Orleans
A. Ashley Weech, Cincinnati
John McK. Mitchell, Executive Secretary, 6 Cushman Rd., Rosemont, Pa.

REQUIREMENTS FOR CERTIFICATION*

All candidates for examination for certification must meet the following requirements:

1. Graduation from an approved medical school.
2. Licensure to practice in the United States prior to issuance of a certificate except in those situations in which a license to practice is not required.
3. One year of rotating, pediatric, or other internship in an approved hospital.
4. Two years of specialized residency-type training in an approved pediatric center.

At least one year of the two years of required residency training must be a full-time medical pediatric inpatient residency or internship in an approved institution. The second year of required residency training may be met in the ways listed below, although the board recommends that whenever possible candidates complete the two years as regular residents.

(*a*) Graduate School courses will be accepted only in exceptional cases by prior arrangement, up to a maximum of nine months.

(*b*) A maximum of three months' credit each is allowed for full-time residency type training in allied pediatric subjects such as pediatric allergy, pediatric psychiatry, pediatric pathology, pediatric radiology, newborn service, etc.

5. A subsequent term of two years of specialized study or practice or a combination of the two.

Credit for one year toward this requirement is allowed for medical military service regardless of the assignment. The maximum credit that any candidate may receive toward the practice requirement for work done prior to the completion of residency training is one year.

Research residencies which involve little or no clinical training are creditable for only three months. Research residencies which include significant clinical training may be prorated to a total of six months for a year of service. Teaching fellowships may not be offered in lieu of residency appointments.

Both research residencies and teaching fellowships are, of course, entirely acceptable in satisfaction of the practice or further study requirements. Portions of a research residency not applicable for residency training credit may be carried over for practice credit.

Preceptorships are not accepted for credit toward the residency requirement, but are accepted toward the practice requirement.

GRADUATES OF MEDICAL SCHOOLS IN CANADA

Graduates of approved medical schools in Canada and those who have received their internship and residency training in pediatrics in hospitals approved by the Royal College of Physicians and Surgeons of Canada will be eligible for examination for certification under the same regulations as those trained in the United States.

GRADUATES OF FOREIGN MEDICAL SCHOOLS

Citizens of the United States.—Citizens of the United States of America who are graduates of medical schools other than those in the United States and Canada will be processed for eligibility for examinations for certification if they can meet all the following requirements:

1. They are graduates of medical schools recommended by the Council on Medical Education and Hospitals of the American Medical Association.
2. They hold a license to practice in the United States.
3. They can meet the internship and residency training requirements of the board as detailed above with the following provisions:

(*a*) Internship and residency training must be served in hospitals approved by the board in the United States.

(*b*) A maximum of the internship and one year of residency training may be allowed for such experience obtained in a small list of foreign hospitals recognized by the board. The other year of residency training must be served in a straight inpatient medical pediatric residency appointment in an approved hospital in the United States.

Citizens of the United States of America who are graduates of medical schools other than those in the United States or Canada, and which are not recommended by the Council on Medical Education and Hospitals of the American Medical Association may be accepted for examination for certification after they have passed successfully part 2 of the examinations of the National Board of Medical Examiners, or the Qualification Examination of the Educational Council for Foreign Medical Graduates, provided they meet all other requirements of the Board as provided in regulations governing such candidates.

Citizens of Other Countries.—Properly qualified candidates who are permanent residents in and citizens of other countries and are licensed to practice there and who have fulfilled the residency training requirements listed above in the United States or Canada may apply for examination for certification by the American Board of Pediatrics.

Such foreign candidates who are returning to their own country at the end of their training period may be examined without completion of two full years in the practice of pediatrics. The residency training requirements must be completed in full in advance of admission to any part of the examinations.

A special certificate, appropriately identified to distinguish it from the regular certificate of this board, may be issued to such candidates who have passed successfully the examinations of this board after they have completed such a period of practice or further study in their own country which when added to similar experience in the United States or Canada, make a total of two years of the practice of pediatrics.

---

*A booklet of information, presenting in more detail the data published here, may be obtained from the Executive Secretary of the Board. To avoid misunderstanding, the board urges any candidate whose training is not clearly covered in these regulations to communicate with that office. Whenever possible, this should be done before entering upon the appointment in question.

INFORMATION CONCERNING EXAMINATIONS

The examinations for certification are given in two sections: part 1 is written, part 2 is an oral examination.

PART 1—*Written*

Written examinations are objective in type and are given once each year, usually in January, simultaneously at a number of places scattered throughout the country, and at a few locations abroad. Candidates must pass the written examination before admission to the oral examination will be authorized.

PART 2—*Oral*

Oral examinations are held four to six times each year at centers offering suitable facilities, in locations determined by proximity to the largest number of eligible candidates. One examination session each year is scheduled at a location closer to candidates from some less populous area. As far as possible, candidates are given a choice of locations, taking into account date application is filed, date of eligibility and proximity to the examination site.

Candidates who are admitted to the oral examination (part 2) will not be informed of their grade on the written portion. Their relative standing in part I will, however, be utilized in final decision with regard to passing.

Candidates who fail after taking part 2 will not be required to retake part 1 but may be advised to do so in order that they may have an opportunity to improve a low score.

APPLICATION

Application must be made on special blanks, which will be furnished by the executive secretary after a preliminary survey of the applicant's training. Applications may be submitted one year in advance of eligibility date; they will not be accepted earlier. The number of candidates admitted to a given written examination will be determined by the number who can be examined orally during that year, plus a reasonable number of alternates.

LETTERS OF RECOMMENDATION

Letters from two competent pediatricians recommending each applicant must be sent to the executive secretary of the board. These letters should not accompany the application but should be sent directly to the executive secretary.

FEES

The application fee is $75.

The full fee must be remitted with the application. No additional fee is required for second and third written examination. The fee for second and third oral examinations is $50 each.

All fees are subject to change effective January 1st of any year.

CERTIFICATION IN SUBSPECIALTY OF ALLERGY

William C. Deamer, Chairman, San Francisco
Susan Dees, Durham, N. C.
Jerome Glaser, Rochester, N. Y.
George B. Logan, Rochester, Minn.
Harry L. Mueller, Boston
Richard H. Todd, Washington, D. C.

The American Board of Pediatrics has established certification in allergy as a subspecialty of pediatrics.

All candidates must hold a certificate in Pediatrics before submitting an application for examination in Allergy.

Each allergy application is individually considered and must be accepted by the subspecialty board.

INFORMATION CONCERNING EXAMINATION

Allergy examinations consist of written and oral portions. The written examination will be given once a year under a local monitor and must be passed before the candidate is admitted to oral examination. Oral examinations will be held at times and places designated by the subspecialty board. Ample notice will be sent to candidates.

FEES

The application fee for certification in allergy is $100.

The full fee must be remitted with the application.

No additional fee is required for second and third written examinations. The fee for second and third oral examinations is $50 each.

All fees are subject to change effective January 1st. of any year.

Application forms will be forwarded on request to the office of the Executive Secretary of the American Board of Pediatrics and should be returned to that office when completed. All correspondence should be addressed to him.

REQUIREMENTS

(1) Certification in Pediatrics.

(2) Two years of full-time training in an approved allergy clinic and its associated hospital. At least half of such training must be in pediatric allergy. Three types of allergy clinics have been approved: (*a*) pediatric, (*b*) adult, and (*c*) mixed.

Two years of training in clinics of type (*a*) or (*c*), or one year in each, is acceptable. One year in (*b*) and the other in (*c*) is not acceptable. Please see Intern and Residency number of The Journal for listing of approved hospitals and associated clinics. In place of (2) the candidate may take (*3*).

(3) One year full-time training in an approved allergy clinic plus two years part-time training of at least 200 hours each year in an approved allergy clinic and hospital.

At least half of the total experience must be in pediatric allergy. Thus, training which consists only in a combination of (*b*) and (*c*) as defined above does not qualify.

OR

(4) Five years, part-time, or at least 200 hours each year, in an approved pediatric or mixed allergy clinic and its activities.

RESEARCH: If at least half of a candidate's qualifying full-time training is in clinical pediatric allergy, the remainder may be spent in supervised allergy research or in training in adult allergy at an approved clinic, or in a combination of the two.

PRECEPTORSHIP: Preceptorship alone is not acceptable, but part of a full-time training program (50% or less) may include supervised training in the private office of a qualified allergist, provided such an arrangement is part of the training program of an approved clinic and the preceptorship and clinic training run concomitantly.

CREDIT FOR COURSES: Established courses or seminars in Allergy and Immunology, which are attended during the training period, may be credited for part-time training. Instructions such as is given in these subjects by the American Academy of Pediatrics, the Academy of Allergy, or the College of Allergy are examples. Three hours of credit toward part-time training will be allowed for each hour of instruction, but not over 40 hours may be so credited each year.

The candidates should be prepared for oral and written examinations in the theory and practice of allergy. This will include immunology, atopy, allergy of infections, experimental hypersensitivity, the clinical manifestations of allergic disease, especially as they appear in infants and children, and also allergic factors that may be present in other diseases. They must be prepared to discuss diagnostic procedures and methods of treatment and the pharmacology of drugs and physiology of respiration as they relate to allergy and asthma. In controversial matters, they should be familiar with arguments on both sides of such questions.

CERTIFICATE

When accepted the diplomate will receive from the American Board of Pediatrics a certificate in pediatric allergy and will be listed as a specialist in pediatric allergy.

Prospective applicants for certification in the subspecialty of pediatric allergy may apply to the executive secretary of the American Board of Pediatrics.

PART-TIME TRAINING

All hospitals approved for full-time training in pediatric allergy are also approved for part-time training. In addition clinics of the following hospitals have been approved for *part-time* training:

Vanderbilt University Hospital, Nashville, J. Overall; Jackson Memorial Hospital, Miami, M. Marks, G. Berg; New York Hospital, New York, P. de Gara; Mt. Sinai Hospital, New York, H. Rappaport; Long Island Jewish Hospital, New York, D. Pearlman; D. C. General Hospital, Washington, D. C., R. Scott; University of Kansas Medical Center, Kansas City, Kansas, F. Speer; Children's Memorial Hospital, Chicago, G. Lanoff.

AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION

Robert L. Bennett, Chairman, Warm Springs, Ga.
William H. Schmidt, Vice-chairman, Philadelphia, Pa.
Arthur S. Abramson, New York
Donald A. Covalt, New York
Thomas F. Hines, New Haven, Conn.
O. Leonard Huddleston, Santa Monica, Calif.
H. Worley Kendell, Peoria, Ill.
A. B. C. Knudson, Washington, D. C.
Frederick J. Kottke, Minneapolis
Donald L. Rose, Kansas City, Kans.
Earl L. Elkins, Secretary-Treasurer, 200 First St., S. W., Rochester, Minn.

QUALIFICATIONS

A. Satisfactory moral and ethical standing in the profession.

B. A legal license to practice medicine in one or more of the states of the United States, its territories, the District of Columbia, or one or more of the provinces of Canada.

C. Graduation from a medical schoool approved by the Council on Medical Education and Hospitals or graduation from a foreign medical school which, in the opinion of the board, offers medical education equivalent to such an approved school; completion of an internship in a hospital approved by said Council.

D. A period of study after the internship of not less than three years in a residency approved by the above mentioned Council. This period of study shall include graduate training in basic science as related to physical medicine and rehabilitation and not less than two years of clinical training and experience in physical disabilities related to the fields of rheumatology, neurology, neurosurgery, orthopedics, and medicine.

E. An additional period of not less than two years in full time practice of physical medicine and rehabilitation.

Training in approved residency programs in closely allied medical-surgical fields may be acceptable in part (for D above), but such credit is limited and based on individual interpretation by the board.

In selected cases, a candidate may be deemed eligible for examination on the basis of eight years of full time practice in physical medicine and rehabilitation (as a substitute for D and E above).

EXAMINATION

The examination for certification is given in two parts. Part 1 is written, part 2, oral. Examinations are given once a year and cover certain aspects of the basic sciences and the clinical aspects of physical medicine and rehabilitation (including the role of associated personnel such as the physical therapist, occupational therapist, clinical psychologist, social service worker, and vocational guidance counselor).

APPLICATION

The application form shall contain a record of the candidate's premedical and medical education, internship, graduate study, and verification of full-time practice in the specialty. The application shall be accompanied by a fee of $75 if the candidate is applying for part 1 only, and by a fee of $125 if applying for parts 1 and 2. (In case of rejection of the application, evaluation fee of $25 will be retained by *the Board, and the examination fee will be refunded.)*

CERTIFICATION

Certificates of the board shall be issued to the effect that the applicant has been found qualified as a specialist in physical medicine and rehabilitation.

AMERICAN BOARD OF PLASTIC SURGERY

Clarence R. Straatsma, Chairman, New York City
Truman G. Blocker Jr., Vice-chairman, Galveston, Tex.
Leslie H. Backus, Buffalo
Herbert Conway, New York City
Reed O. Dingman, Ann Arbor, Mich.
John B. Erich, Rochester, Minn.
William H. Frackelton, Milwaukee
James B. Johnson, Beverly Hills, Calif.
Edward A. Kitlowski, Baltimore
J. J. Longacre, Cincinnati
Gerald B. O'Connor, San Francisco
Kenneth L. Pickrell, Durham, N. C.
Henry P. Royster, Philadelphia
Charles F. Steiss, San Francisco
Frank McDowell, Secretary, St. Louis, Mo.
Mrs. Estelle E. Hillerich, Corresponding Secretary, 4647 Pershing Ave., St. Louis 8, Mo.

GENERAL REQUIREMENTS

1. Moral and ethical standing in the profession satisfactory to the board.

The board, believing that the practice of "fee splitting" is pernicious, leading as it does to traffic in human life, will reserve the right to inquire particularly into any candidate's practice in regard to this question.

2. Those whose activities are limited to the practice of plastic surgery.

3. This board will accept as applicants for examination only those who are full citizens of the United States or Canada. Notarized statements, not original citizenship papers, attesting to the fact of full citizenship in the United States or Canada must be furnished by foreign-born applicants when the application is filed. Such candidates must have at least two years of practice in plastic surgery in North America after completing the training required by the board.

PROFESSIONAL REQUIREMENTS

The board considers the requirements outlined below to be minimal in attaining its purposes and encourages candidates to take advantage of broadening experience in other fields. Candidates must fulfill the requirements that are in force at the time of their examination and/or certification.

1. Graduation from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from a foreign school considered acceptable by the board.
2. Completion of an internship of not less than one year in a hospital approved by the same Council.
3. Two years of postgraduate work in general surgery, beyond the intern year, as a resident or an assistant resident in a hospital approved by the same Council. This requirement will be increased to three years for those candidates who start their residencies or preceptorships in plastic surgery on or after July 1, 1960.
4. Training in general plastic surgery, including maxillofacial surgery, for an additional period of not less than two years in a residency approved by the same Council, or in a preceptorship approved by the Board. In fulfilling this requirement, there is a limit of one year's credit given for all work done in all governmental plastic surgery residencies (Army, Navy, Veterans Administration hospital, etc.) regardless of the time put in by trainees in such residencies. It is required that all such trainees take one additional year of approved training in plastic surgery in a civilian residency or preceptorship.
5. During these years of training following the internship year, a candidate must hold positions of increasing responsibility for the care and management of patients with surgical conditions. When a candidate receives his training in more than one institution, it is equally imperative that he hold positions of increasing responsibility. He must have sufficient operative experience to acquire surgical skill and judgment through the performances of surgical operations with a high degree of responsibility, but under circumstances providing adequate opportunity for consultation and advice.
6. An additional period of not less than two years of practice in plastic surgery. If a candidate elects to spend one or two additional years in approved training in plastic surgery, one year of such training will be credited toward the required two years of private practice if it can be demonstrated that the candidate held a position of increasing responsibility. It is imperative that one year be in actual private practice in such instances.

The Board gives credit only for training in plastic surgery received in the United States or Canada but may, at its discretion, give credit towards the required private practice period for training in plastic surgery received in countries other than the United States and Canada, each case being determined individually.

Educational Council for Foreign Medical Graduates.—The American Board of Plastic Surgery will accept the certificate of the ECFMG as evidence that the holder thereof is possessed of medical knowledge comparable to that expected of graduates of approved medical schools in the United States or Canada.

The above training in plastic surgery may be taken as a resident in an approved hospital or under an approved preceptorship offering equivalent training (a list of currently approved preceptorships is available from the board office).

The period of special training should emphasize the relation of the basic sciences—anatomy, pathology, physiology, biochemistry, bacteriology—to the application of surgical principles which are fundamental in all branches of surgery, and especially to plastic surgery. In addition, the candidate must understand and be trained in the following subjects: the care of emergencies, shock, hemorrhage, blood replacement, electrolyte and fluid balance, choice of anesthetics, chemotherapy, acidosis and alkalosis, narcotics and hypnotics, wound healing, etc.

The board reserves the privilege of requesting lists of operations done solely by the candidate for one or more years, or of requesting special and extra examinations, written or oral and practical, and of requesting any specific data concerning the candidate that may be deemed advisable before making final decision for certification.

Eligibility rulings or an evaluation of a candidate's qualifications or training cannot be made by the secretary or by any one member of the board. Official evaluations of qualifications are made only by the committee on credentials and requirements or by the entire board where necessary after a review of the candidate's formal application for such rulings. The applicant must allow at least two months for such requests to make the rounds of the committee.

Beginning in 1960, the Board will issue special Foreign Certificates to qualified foreigners who have completed two or more years of approved training in plastic surgery in the United States or Canada and who have passed the examinations of the Board. Such foreign Certificates will not be valid in the United States or Canda, but are for use in the respective foreign countries where the men are citizens and where they will practice plastic surgery. Requirements for the Foreign Certificates may be obtained in detail from the Office of the Board.

TRAINING FACILITIES

Residencies.—The American Board of Plastic Surgery does not assume the responsibility for independent inspection and approval of residency programs in plastic surgery, but recognizes those residencies in plastic surgery approved by the Residency Review Committee in Plastic Surgery. This Committee is a tripartite body composed of representatives from the Council on Medical Education and Hospitals of the American Medical Association, from the American College of Surgeons, and from the American Board of Plastic Surgery, the secretary of the committee being a member of the Council on Medical Education and Hospitals of the American Medical Association.

Any diplomate of the Board desiring approval of a residency program of training under his supervision should apply, or have his hospital administrator apply, to the Residency Review Committee in Plastic Surgery, c/o Council on Medical Education and Hospitals of the American Medical Association, 535 No. Dearborn St., Chicago 10, Illinois. He will be sent a regular application blank to be filled out and returned to that committee. The committee will appoint inspectors to go to the hospital to inspect the program. The question of approval will then be considered at the next semi-annual meeting of the Residency Review Committee and the applicant informed of the result. It usually takes a period of six to twelve months to process an application.

A list of approved residencies in plastic surgery is published annually in the Internship and Residency Number of The Journal of the American Medical Association and in the Bulletin of the American College of Surgeons. The list may also be obtained from the Office of the Board, but the Board assumes no responsibility for placing men who wish to enter training and does not keep a list of openings in training programs. Such men should apply directly to the chiefs of residency programs in which they might be interested, or to the chiefs of preceptorship programs, to ascertain if openings exist and if they will be accepted to fill such openings.

Preceptorships.—In certain instances the Board will accept, in lieu of the required two years' training in an approved residency, training in a preceptorship program approved by the Board. A list of the existing preceptorship programs may be obtained from the Office of the Board. The chiefs of these preceptorship programs have been urged to convert the programs into approved residencies when the local situation permits, since the aim of the Board is to approve training in residencies only and not in preceptorship programs.

All trainees, whether residents or preceptees, must submit an annual report to the Board of the training being received. Report forms for this purpose may be obtained from the Office of the Board upon request.

It should be kept in mind by all that the primary interest of the board is to encourage well-rounded training in plastic surgery with the aim of producing plastic surgeons capable of doing good work in the wide variety of cases which may come under their care. The standards set up by the board both for preliminary general surgery and for specialized plastic surgery training, are established in an effort to further this aim. The quality of the training received should be reflected in the candidate's ability to achieve good results in his practice, and the examinations of the board are an attempt to judge the ability of the candidate in the specialty of plastic surgery.

Before training in plastic surgery is begun, the plastic surgeon in charge of the residency or preceptorship should ascertain that the trainee's preliminary training in general surgery meets the requirements of the board, that is, two years of residency training in general surgery after the internship year.

The training in plastic and maxillofacial surgery (at least two years) whether in a residency or a preceptorship, should cover a wide field of plastic surgery, both as to type and anatomic distribution. It should include experience in the treatment of congenital and acquired defects and deformities of the face, neck, body, and extremities, for both functional and esthetic reasons. There should be available sufficient material of a diversified nature so that the trainee will be able to pass the examinations of the board after the period of training and the two additional years of private practice. If the available material on one service is inadequate, the deficiency should be made up by affiliation with another plastic surgeon on another service so that a broad experience will be obtained in plastic surgery. The trainee should be provided an opportunity to operate under the direct supervision of the plastic surgeon in charge, and with increasing ability, should be given an opportunity to operate independently on suitable cases under more remote supervision.

MILITARY CREDIT

Credit for military service is given on an individual basis, each case being considered on its own merits, and the amount of credit allowed is determined by the board when the information is submitted with the application.

The Medical Officer's Professional Training Record (DD Form 408) is a record maintained by individual Medical Corps officers for presentation to the various authorized accrediting boards toward certification. This record is presented by the officer to the boards for evaluation of the military experience acquired by Medical Corps officers while serving in the Army Medical Service. This form has been prepared by the surgeons general of the armed services with the assistance of the Council on Medical Education and Hospitals of the American Medical Association and is distributed by the offices of the Surgeons General to their personnel. It is highly important that prospective applicants obtain a copy of this form and that it be submitted with their credentials for evaluation by the board.

CASE REPORTS

Upon approval by the board of a candidate's application for certification, each candidate is required to submit to the board 35 or more case reports illustrative of his independent work in the field of general plastic surgery.

Candidates are admitted to examination only after submitting case reports that meet the required standards of the board and that have been approved by the committee on credentials and requirements.

Case reports must be submitted within one year from the time of such request; otherwise a new application must be filed. The case reports shall conform to conditions which the board may from time to time specify.

Case reports must be received in the office of the board by January 1 for those who desire to be considered for the spring (May-June) examinations of the board and by July 1 for the fall (October-November) examinations. There will be no exceptions to these two deadlines.

The 35 case reports must be of a diversified nature and must be submitted to the office of the board together with before and after photographs. They should be of the following distribution:

1. Cleft lip: 1 to 3 cases
2. Cleft palate: 1 to 3 cases
3. Traumatic defects requiring reconstructive surgery:
   (a) Face and neck: 2 to 4 cases
   (b) Body: 1 to 4 cases
   (c) Extremities: 1 to 6 cases
4. Acute burns: 2 to 4 cases
5. Fracture of facial bones, excepting nasal fractures: 1 to 3 cases
6. Esthetic operations of sufficient variety: 6 to 12 cases
7. Plastic surgery of the hand: 2 to 4 cases
8. Malignancies or conditions prone to malignancies (eradication and repair):
   (*a*) Face: 2 to 4 cases
   (*b*) Body: 1 to 3 cases
   (*c*) Extremities: 2 to 4 cases
9. Congenital anomalies: 1 to 6 cases
   (*a*) Examples:
   (1) Syndactylism
   (2) Congenital absence (partial or total) of external ear
   (3) Hypospadias
   (4) Bands (constricting)
   (5) Thyroglossal duct cyst
   (6) Extensive nevi, etc.

If the case reports and lists of operations are approved, the candidate will receive subsequent information regarding taking the examinations. The board at its discretion may request certification of case reports by the hospital where the operations were performed. The following form should accompany the case reports: "I hereby certify that the planning and essential surgical procedures described herein were carried out by me as an independent operator."

Every candidate's final acceptability for examination is based not only on the evaluation of his training qualifications but on his professional ability as a plastic surgeon, his ethical standing in the community, and the strict limitation of his work to plastic surgery.

A candidate should remember that these case reports are documentary evidence of his ability and that the material in them and the manner of presentation are important evidences of his ability.

In instances where a candidate submits case reports that do not meet the standards of the board, he will be required to submit additional case reports or an entirely new set of 35 within a period of one year. If this second series of new case reports again do not meet the standards of the board, the candidate may be required to take additional training (of length and type specified by the board) before he will be allowed to submit any further case reports.

After a candidate has been notified that he has fulfilled the preliminary requirements and that his case reports have been approved, he will be required to take the qualifying examination within a period of three years.

After approval of the case reports, and prior to the examination, the candidate will be visited at his place of practice by a member or members of the board to observe him operate and to examine a number of his preoperative and postoperative cases.

EXAMINATIONS

The qualifying examinations are given twice yearly, in the spring and fall. The spring examination is given immediately preceding, during, or following the annual meeting of the American Association of Plastic Surgeons (usually in May), and the fall examination is given immediately preceding, during, or following the annual meeting of the American Society of Plastic and Reconstructive Surgery (usually in October). Candidates are required to go to the designated center for the qualifying examination, which will last three days. These centers will be the city in which the meetings of these two organizations are held if the proper clinic and hospital facilities are available, otherwise in some nearby city where such material is available. Arrangements for all examinations are made by the examination committee.

A written examination will consume all of the first day and half of the second day. An oral and practical examination will consume the afternoon of the second day and all of the third day. The subjects of the written examination are (1) theory and practice of plastic surgery, (2) applied anatomy, applied physiology, (3) pathology, bacteriology, clinical laboratory methods (pharmacology), (4) reaction of tissue to injury, surgical accidents, anesthesia. A general oral examination pertaining to plastic surgery will be given. In the practical part of the examination, the examiner will present a group of patients for examination by the candidates, and the candidates will be quizzed on methods of procedure—diagnosis, treatment, technique, and so on. Slides of pre-operative conditions will be shown on a screen and the candidate asked to make a quick diagnosis of the items and to tabulate in the order of their importance the methods of treatment. Microscopic slides of the average pathological tissue falling within the province of the plastic surgeon will be given the candidates, and they will be asked to write a description and diagnosis.

GRADES

To be considered as passing, the candidate will be required to receive a grade of at least 65% in each portion of the written examination and an average grade of 75% on the entire written and oral examination.

CERTIFICATION

After a candidate has met the requirements for eligibility and passed the examinations of the board, a certificate attesting his qualifications in plastic surgery will be issued to him by the board, signed by its officers and having the seal of the board affixed thereto. It shall be the prerogative of the board to determine the fitness professionally and ethically of any candidate for its certificate, and the action or decision of the board regarding the certification of any candidate shall be final.

FEES

The fee for application and examination is $150. Of this sum, $25 must accompany the application, and the remaining $125 must be paid when the candidate is notified of acceptance for examination. There will be no refunds. This fee may be increased at the discretion of the board. The board is a nonprofit organization, and the fees of candidates are used solely for defraying the actual expenses of the board. The members of the board serve without remuneration. Because of the limited number of surgeons certified by this board it is necessary for a limited time to request a voluntary annual contribution of $15 from diplomates after the first year's certification to help defray expenses.

THE AMERICAN BOARD OF PREVENTIVE MEDICINE

Ernest L. Stebbins, Chairman, Baltimore
V. A. Van Volkenburgh, Vice-chairman for Public Health, Albany, N. Y.
Otis O. Benson Jr., Vice-chairman for Aviation Medicine, Randolph Air Force Base, Texas
James H. Sterner, Vice-chairman for Occupational Medicine, Rochester, N. Y.
J. H. Baillie, Toronto
Leroy E. Burney, Washington, D. C.
Oran W. Chenault, Washington, D. C.
A. G. Kammer, Pittsburgh
Robert A. Kehoe, Cincinnati
William J. Kennard, Washington, D. C.
Charles F. Sutton, Springfield, Ill.
Tom F. Whayne, Secretary-Treasurer, 615 N. Wolfe St., Baltimore 5, Md.

ELIGIBILITY REQUIREMENTS FOR EXAMINATION

Each applicant for a Certificate in Public Health, Aviation Medicine, or Occupational Medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the by-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the by-laws, as from time to time in force, by which alone such requirements are governed:

GENERAL REQUIREMENTS

1. Good moral character and high ethical and professional standing;
2. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education and Hospitals of the American Medical Association, or from a foreign school satisfactory to the Board;
3. A hospital internship of at least one year approved by the Council on Medical Education and Hospitals of the American Medical Association, or a foreign hospital internship satisfactory to the Board; and
4. Authority to practice medicine in a state, territory, commonwealth or possession of the United States or in a province of Canada.

SPECIAL REQUIREMENTS IN PUBLIC HEALTH

1. Successful completion (after internship) of at least one academic year of graduate study leading to the degree of Master of Public Health or an equivalent degree or diploma in a school of public health accredited for the purpose of such graduate study by the American Public Health Association; or training or study deemed by the Board to be substantially equivalent to such graduate study;
2. Residency (after internship) of at least two years of field experience in general public health practice, which included planned instruction, observation, and active participation in a comprehensive, organized, public health program approved by the Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and Hospitals and the Board; or an equivalent Canadian residency approved by the Board; one year of such period in both instances may be an approved clinical residency in a field directly related to public health;
3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of public health;
4. Three years of the experience outlined in 2 and 3 above must have been obtained within the five-year period immediately prior to application for certification; and
5. Limitation of practice to full-time teaching or practice of public health as a specialty.

SPECIAL REQUIREMENTS IN AVIATION MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive medicine and aviation medicine, one year of which graduate study shall be in a school of public health accredited for the purpose of such graduate study by the American Public Health Association and one year of which shall be in a school of aviation medicine accredited for the purpose of such graduate study by the Council on Medical Education and Hospitals of the American Medical Association; or training or study deemed by the Board to be substantially equivalent to such graduate study;
2. Residency (after internship) of at least one year of supervised experience in aviation medical practice, which included planned instruction, observation, and active participation in a comprehensive, organized program of aviation medicine;
3. Supervised practice of aviation medicine (after internship) of not less than one year, in addition to 1 and 2 above, of special training in or teaching or practice of aviation medicine;
4. A period (after internship) of not less than two years, in addition to 1, 2, and 3 above, of special training in or teaching, research, or practice of aviation medicine;
5. Three years of the experience outlined in 2, 3, and 4 above, must have been obtained within the five-year period immediately prior to application for certification; and
6. Limitation of practice to full-time teaching, research, or practice of aviation medicine.

SPECIAL REQUIREMENTS IN OCCUPATIONAL MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive and occupational medicine in a school of medicine, a university graduate school, a school of public health, or a combination of these schools, all of which must be accredited for such graduate study by the Council on Medical Education and Hospitals of the American Medical Association; or training or study deemed by the Board to be substantially equivalent to such graduate study;
2. Completion (after internship) of not less than one year, in addition to 1 above, of supervised experience in occupational medical practice in an industrial or medical organization, which shall have provided planned instruction, observation and active participation in a comprehensive program of occupational medicine; or a period of experience deemed by the Board to be substantially equivalent to such year of supervised experience;
3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of occupational medicine;
4. Three years of the experience outlined in 2 and 3 above must have been obtained within the five-year period immediately prior to application for certification; and
5. Limitation of practice to full-time teaching, research, or practice of occupational medicine.

APPLICATIONS FOR EXAMINATION AND REEXAMINATION

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine), and must be filed with the Secretary, ordinarily not less than 90 days prior to the date of examination. It must be accompanied by the required documentation, application fee, and two recent, clear, unmounted, autographed photographs of the applicant, one of which should be attached to the application and the other unattached.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination but who fails to submit to examination within three years of the date of the filing of his application is required to file a new application and to pay a new application fee.

Candidates failing the examination may, upon timely application and payment of appropriate fee, be admitted to reexamination within a specified period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

MULTIPLE CERTIFICATION

A person who has been certified in one affiliated specialty may apply for certification in another affiliated specialty; however, the applicant must meet in full the special requirements for each of the affiliated specialties in which he desires to be examined.

In determining whether the applicant meets such requirements, no period of training or experience, other than graduate study, will be taken into account if the same period shall have been taken into account in determining his eligibility for another affiliated specialty.

FEES

The application fee is $25. It must be submitted with application and is not refundable.

The examination fee is $100. It is payable when applicant is notified of acceptance for examination; if paid prior thereto, it is not refundable after such notification has been given.

No additional fee is payable for the issuance of a certificate.

Reexamination fees are: each part taken, $25; examination fees, additional affiliated specialty, each $50.

EXAMINATIONS

Examinations will be held from time to time and in various places depending upon need as indicated by applications received. Examinations in some instances will be held in connection with the annual meetings of the nominating organizations and also may be held at other times and at other places so located geographically as to minimize travel for the applicants.

The written examination consists of two parts:

Part one is a comprehensive written examination designed to test the knowledge of the applicant in the basic principles of preventive medicine. Part two is a comprehensive written examination designed to test the knowledge of the applicant in the special field in which he requests certification.

An oral or practical examination is also required, which usually will be held at the completion of the written examination. An endeavor will be made to adapt the details of the oral or practical examination to each candidate's experience and practice.

Candidates for certification in a second or third affiliated specialty will be required to pass only that portion of the written examination relating specifically to such field.

The examiners will report upon each candidate to the assembled Board, by which the result of the examination will be considered.

AMERICAN BOARD OF PROCTOLOGY

A. W. Martin Marino, President, Brooklyn, N. Y.
Robert J. Rowe, Vice-president, Dallas, Texas
J. Edwin Alford, Buffalo, N. Y.
Frederick B. Campbell, Kansas City, Mo.
Clifford E. Hardwick, Portland, Ore.
M. O. Hines, New Orleans
H. R. Reichman, Salt Lake City
R. A. Scarborough, San Francisco
Karl Zimmerman, Pittsburgh
Stuart T. Ross, Secretary, 520 Franklin Ave., Garden City, N. Y.

QUALIFICATIONS AND REQUIREMENTS

General

All candidates shall comply with the following regulations:

1. A candidate shall possess moral, ethical, and professional qualifications acceptable to the Board.
2. He shall possess full citizenship in the country in which he practices.
3. He shall limit his practice to proctology, shall appear personally before the Board, and shall submit to the required examinations.
4. He shall deliver to the Board upon request an official record of patients hospitalized by him during the year prior to the date of submission of the application.
5. He shall submit a bibliography of papers and books published by him.

PROFESSIONAL QUALIFICATIONS

1. He shall be a graduate of a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. He shall possess a license to practice medicine in the country of his residence.
3. He shall have completed an internship, preferably of the general rotating type, of not less than 12 months in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

SPECIAL PROFESSIONAL QUALIFICATIONS

1. He shall have completed a minimum of three years of an approved general surgical residency and one of the following:

(*a*) Two years of a proctologic residency approved by the Board; or

(*b*) Two years of a proctologic preceptorship approved by the Board.

2. Applicants who present evidence of exceptional training and experience in colonic and rectal surgery during their three years of training in general surgery may, upon special application and approval by the Board, be accepted for examination following one year of approved training in Proctology.

APPLICATIONS

Each candidate for examination shall submit an application prepared upon the prescribed form which may be obtained from the Secretary of the Board. It shall contain a record of the candidate's premedical and medical training, internships, residencies, precepteeships, other postgraduate study, hospital and dispensary appointments, teaching positions, service in the armed forces, service in federal, state or local government, membership in medical societies, and any additional information considered valuable by the Board.

The application shall be signed by two proctologists. It shall be accompanied by two unmounted autographed recent photographs of the candidate, letters of endorsement from appropriate sources and the application fee. It shall be filed with the Secretary not less than 90 days prior to the date of examination.

EXAMINATIONS

Examinations are conducted at times and places determined by the Board and are announced in The Journal of the American Medical Association.

Seventy-five per cent is the passing grade on all examinations.

Examination papers are identified only by numbers and the examiners do not know the identity of the examinees.

Part 1: This consists of a comprehensive written examination in the basic science, including anatomy, physiology, pathology, bacteriology, and biochemistry. The examination is held in the fall of the year simultaneously in several cities of the United States.

Upon approval of the American Board of Proctology, candidates who have been certified by the American Board of Surgery and who have completed required training in proctology may not be required to take part 1 of the examinations of the American Board of Proctology.

Part 2: This is a practical examination which is held in the community in which the candidate conducts his professional activities. (It may be omitted at the discretion of the Board, in which case the candidate will be notified by the Secretary.) It is endeavored to arrange the examination at a time suitable to both the candidate and the examiner. The examination includes the inspection of:

1. Surgical operations.
2. Hospital rounds.
3. Hospital and office records.
4. Office practice.

Part 3: This consists of comprehensive written and oral examinations on the theory and practice of proctology and includes roentgenologic interpretation. The examination is usually held in the fall of the year in one designated city of the United States. The candidate is not admitted to part 3 examinations until he has completed the requirements of part 2.

The oral portion of the examination is conducted by members of the Board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current proctologic literature, his knowledge of the basic sciences, and the extent of his clinical experience and other qualifications.

FEES

Application fee: A fee of $25 shall accompany the application.

Examination fee: A fee of $150 is due and payable when the candidate is notified that he has been approved for examination.

No fee shall be returned to the candidate without Board approval.

All fees shall be made payable to the American Board of Proctology and shall be sent to the secretary.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

Francis J. Gerty, President, Chicago
Francis M. Forster, Vice-president, Madison, Wis.
A. B. Baker, Minneapolis
Harvey Bartle Jr., Philadelphia
C. H. Hardin Branch, Salt Lake City
Henry W. Brosin, Pittsburgh
Hugh T. Carmichael, Chicago
Sidney Carter, New York City
Knox H. Finley, San Francisco
William Malamud, New York City
Alexander T. Ross, Indianapolis
David A. Boyd Jr., Secretary-Treasurer, Rochester, Minn.

APPLICATION FOR CERTIFICATION

An application, in order to be considered at any meeting of the Board, must be in the hands of the Secretary of the Board not less than 90 days before the date of such meeting. A proper application form may be obtained from the Secretary. Application may be made for certification in psychiatry or in neurology or in both fields. Applications will be formally considered only when made on the official application blank in such form as may be adopted from time to time by the Board and when accompanied by an application fee in such amount as may be fixed by the Board.

The Secretary of the Board, upon receipt of an application shall forthwith make inquiries from those to whom the candidate refers and from such other persons as the Secretary may deem desirable and shall verify the candidate's record from the biographical records of the American Medical Association, after which he shall forward the application to the Committee on Credentials. This Committee shall consider the application and other information available and notify the Secretary whether the application is accepted. The certification of a candidate in either psychiatry or neurology, or both, shall be approved by a majority of the members of the entire Board at any meeting held for such certification.

FORM OF CERTIFICATION

There shall be separate certification in psychiatry and in neurology and two certifications or a combined certification for those qualified in both fields. The certification shall be in such form as is approved by the Board of Directors.

GENERAL REQUIREMENTS FOR APPLICANTS

Each application for a certificate must establish that:

(*a*) He is a physician duly licensed by law to practice medicine.

(*b*) He is of acceptable ethical and professional standing.

(*c*) He is now a member of the American Medical Association. Exceptions to the foregoing may be made at the discretion of the Board for good and sufficient reasons.

(*d*) He has satisfactorily completed adequate training in psychiatry or neurology, or both, as a specialty.

CLASSES OF APPLICANTS

CLASS A

Applicants who graduated from an approved medical school before the foundation of the Board (1934) will not be held to the strict interpretation of the published requirements in formal graduate training. Under such circumstances the Board will consider the training and experience of the applicant and decide whether or not he will be admitted to the examinations. For such graduates the Board will consider ten years of full-time acceptable experience in psychiatry or neurology in lieu of the formal training requirements. Should the candidate then apply for supplementary certification, the Credentials Committee will require five years of additional acceptable experience in the supplementary field.

CLASS B

Applicants who graduated from an approved medical school after 1934 shall fulfill the following special requirements.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States or Canada approved by the Council of Medical Education and Hospitals of the American Medical Association. In the case of an applicant whose medical training has been received outside the United States and Canada, such training must be satisfactory to the aforementioned Council.

2. Satisfactory completion of a year's internship approved by the same Council in General Medicine, General Surgery, Pediatrics or a rotating service.

3. The nine-month wartime internships will be accepted as an equivalent of one year.

SPECIALIZED TRAINING

Admission to the examination for certification in psychiatry or in neurology requires a total of five calendar years of training and experience, three years of which must be specialized training satisfactorily completed in approved training centers, plus two years of experience.

Admission to the examination for certification in both psychiatry and neurology requires a total of six calendar years of training and experience, five years of which must be specialized training satisfactorily completed in approved training centers, plus one year of experience. The specialized training may be subdivided into two and one-half years each in psychiatry and neurology or three years in one subject and two years in the other. The required years of experience should be spent in clinical practice with major responsibility for the care of patients.

All applicants who wish to qualify for examination for certification in Psychiatry or Neurology under the regulations relating to training credit and who began training on or after July 1, 1956, must show that at least 24 months of their residency training have been secured in residency training programs approved for at least two years of residency training in the specialty in which they seek certification.

The training for psychiatrists should include clinical work with psychoneurotic and psychotic patients, combined with the study of basic psychiatric sciences, medical and social psychology, psychopathology, psychotherapy, and the physiological therapies, including a basic knowledge of the form, function and pertinent pathology of the nervous system. The training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training period should include instruction in the psychiatric aspects of general medical and surgical conditions and the behavior disorders of children and adolescents sufficient to develop practical ability to direct the treatment of such conditions. It should also include collaborative work with social workers, clinical psychologists, courts, and other social agencies. The training program of the candidate for certification in psychiatry should include sufficient training in neurology to enable him to recognize and to evaluate the evidences of organic neurological disease.

The training for neurologists should be based on clinical work with adults and children with neurological disorders, including the neurological complications of medical and surgical conditions. This should be combined with study of the basic neurological sciences, neuroanatomy, neurophysiology, neuropathology, and neuroroentgenology. This training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training should include sufficient training in psychiatry to enable the candidate to recognize and evaluate the common psychiatric reactions.

The Board offers the foregoing two paragraphs as an outline of desirable training. If, however, the candidate has evidence of equivalent qualifications of training and experience not in the pattern here formulated, this evidence with appropriate documentary support may be included in his application for evaluation and possible approval by the Board.

Candidates seeking certification in both neurology and psychiatry, or supplementary certification in one after being certified in the other, must submit evidence satisfactory to the Board of an additional two years of fulltime basic training in the supplementary specialty.

Thus, no candidate is eligible for examination by the Board until he has completed at least five years of special training and experience in neurology or in psychiatry for a single certificate, or at least six years of special training and experience in neurology and psychiatry for certification in both neurology and psychiatry.

The Board will give not more than six months of credit for not less than six months of training in an approved training center for Internal Medicine or Pediatrics in lieu of six months of experience to candidates for the certificate in psychiatry or neurology but not to candidates for certification in both psychiatry and neurology.

The Board will give credit for one year of training in Child Psychiatry providing it is the third year of the required three years of special training required by the Board and providing it is taken in a center approved by this Board for training in Child Psychiatry. After July 1, 1956, training credit for work in the field of Child Psychiatry may be gained only by participation in a hospital residency training program that is regularly approved. After that date, all independent training approval of psychiatric clinics for children is discontinued.

The lists of training programs approved by this Board and by the Council on Medical Education and Hospitals of the American Medical Association may be found in the current issues of the Educational Number of The Journal of the American Medical Association.

TRAINING IN THE ARMED FORCES

Training and experience credit toward requirements for examination will be granted for military duty in the Korean emergency under certain conditions. This policy relates to active military medic duty since July 1, 1950. One year of training credit will be granted for one year spent in full-time psychiatric and/or neurologic duties. Additional training credit will be granted for that amount of time spent in approved training programs. Experience credit will be granted for any remaining time spent in full-time psychiatric and/or neurologic assignments. Double credit will not be granted for any single period of time.

For military duty after January 1, 1954, only experience credit will be granted for full-time psychiatric and/or neurologic duties. Training credit will be granted for residency assignments in regularly approved training programs.

Training credit for full-time psychiatric and/or neurologic assignments in unapproved military programs or services between the dates of January 1, 1950 and January 1, 1954, was terminated as of January 1, 1959.

EXAMINATIONS

Dates and places of examinations shall be set by the Board at its discretion and shall be announced in The Journal of the American Medical Association, in the *American Journal of Psychiatry*, in the *Journal of Nervous and Mental Diseases*, and in the *Archives of Neurology and Psychiatry*.

Though the purpose of the examination is to test the competence of the candidate in psychiatry or neurology or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires some proficiency in neurology on the part of those it certifies in psychiatry and vice versa, but examines the candidate in accordance with the certificate he seeks. The examinations will be of such type that no adequately trained person will fail, and yet they will be sufficiently searching so that the specialist in fact may be separated from the specialist in name. The practical examination will include the examination of patients under the supervision of the examiner. The manner of examining patients, and the reasoning and deductions therefrom, will constitute an important part of the examination. Oral and practical examinations will be given in the basic sciences with special regard to their clinical implications. Written examinations may be given at the discretion of the Board. The examination for certification in psychiatry will differ from the examination for certification in neurology.

PAYMENT OF FEES

The candidate upon filing his application shall accompany it with an application fee of $50.00, which is not returnable. If a preliminary written examination has been decreed, an additional $25.00 fee will be required at the time of the applicant's acceptance. When notified by the Secretary that he is accepted for the oral and practical examination, the candidate shall send to the Secretary an examination fee of $75.00. A candidate who has been certified in either psychiatry or neurology and who has been admitted to supplementary examination for the other certificate shall pay an additional examination fee of $75.00.

A candidate who has failed in one examination is eligible for re-examination within one year upon payment of a re-examination fee of $75.00. After the year has elapsed, he must submit a new application and pay new application and examination fees. If he fails the re-examination, he may, after two years have elapsed, submit a new application and $50.00 fee, present evidence of further training, and pay an examination fee of $75.00.

A candidate who fails in one or two subjects is eligible for re-examination in those subjects within one year upon payment of a re-examination fee of $50.00. After the year has elapsed he must submit a new application and pay new application and examination fees and repeat the entire examination. If he fails the re-examination, he may apply again for the complete examination after two years upon submission of evidence of further training and upon payment of an application fee of $50. If admitted to the examination, he must pay a new examination fee of $75.

Any candidate who finds himself unable to attend an examination to which he has been admitted and does not notify the Secretary at least three (3) months before the date of the examination will forfeit his examination fee. Any candidate who fails to appear for examination within a period of three (3) years following the date of notification of eligibility for examination shall be required to submit a new application and pay the attendant fee. If a candidate dies before his certificate is issued, all fees will be returned to his estate.

Beginning January 1, 1958, all unused examination fees, or portions of examination fees, on deposit in the Board Office will be forfeited by the Candidate to the Board when the application lapses by going out of date. Further, all unused examination fees, or partial, unused examination fees, deposited before the date of January 1, 1952, were automatically forfeited by the candidate to the Board on January 1, 1958.

THE AMERICAN BOARD OF RADIOLOGY

Bernard P. Widmann, President, Philadelphia
Laurence L. Robbins, Vice-president, Boston
James W. J. Carpender, Treasurer, Chicago
Robert Barden, Philadelphia
Earl Barth, Chicago
John A. Evans, New York City
C. Allen Good, Rochester, Minn.
E. L. Jenkinson, Chicago
Traian Leucutia, Detroit
F. W. O'Brien, Boston
Lester Paul, Madison Wis.
Harold O. Peterson, Minneapolis
Douglas Quick, New York
Ernest H. Wood, Chapel Hill, N. C.
H. Dabney Kerr, Secretary, Kahler Hotel Bldg., Rochester, Minn.

CERTIFICATES

A certificate granted by this board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice radiology. Certificates of the board shall be issued in one of three categories:

1. Radiology: that branch of medicine which deals with the diagnostic and therapeutic application of radiant energy including roentgen rays, radium and radioisotopes.
2. Diagnostic Roentgenology: that branch of radiology which deals with the diagnostic application of roentgen rays.
3. Therapeutic Radiology: that branch of radiology which deals with the therapeutic application of roentgen rays, radium and radioactive isotopes.
4. Radiological Physics: that branch of physics which deals with the medical application of roentgen rays, gamma rays, radioisotopes, nuclear reactions, and particle accelerators.
5. Roentgen-ray and Gamma-ray physics: that branch of radiological physics which deals with roentgen rays and gamma rays.
6. Medical Nuclear Physics: that branch of radiological physics which deals with radioisotopes, nuclear reactions and particle accelerators.

GENERAL REQUIREMENTS AND QUALIFICATIONS

Each applicant shall be required to present evidence that he has met the following standards:

1. Satisfactory moral and ethical standing in the profession.
2. A license to practice medicine in the state or county in which he resides.
3. Holds himself out to be a specialist in radiology or one of its branches as defined and devoted his time to the practice of radiology or one of its branches.
4. He is a citizen of the United States or Canada. A candidate from another country must be a permanent resident of that country and a citizen thereof.

PROFESSIONAL EDUCATION

1. Graduation from a medical school recognized by the Council on Medical Education and Hospitals of the American Medical Association.
2. Completion of an internship of not less than one year in a hospital approved by the same Council. After completion of the internship, there shall be a period of special training (length of time as indicated below) in an approved department of radiology.

Radiology: Those beginning their training before July 1, 1956, must have three years formal residency training in an approved department of radiology.

Those beginning their training on July 1, 1956, or thereafter must have three years formal residency training in an approved department of radiology plus an additional year of either further training or practice. The three-year training period must include the equivalent of six months (total) in pathology and isotopes. If the candidate does not wish to be examined in Nuclear Medicine, he must have three months of Pathology.

Diagnostic Roentgenology: Those beginning their training before July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology. The equivalent of six months of time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology (the equivalent of six months of which time must have been devoted to Pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1957, or thereafter will be required to take three years formal residency training in an approved department of radiology plus an additional year of either further training or practice. The three year training period must include the equivalent of three months of training in Pathology.

Therapeutic Radiology: Those beginning their training before July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology. The equivalent of six months of this time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years formal residency training in an approved department of radiology (the equivalent of six months of which time must have been devoted to Pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1957, or thereafter will be required to take three years formal residency training in an approved department of radiology. They will also be required to take an additional year of either further training or practice. Those applying for therapeutic radiology alone must show evidence of personal experience in the use of intracavitary and interstitial radium or equivalent sources, as well as proficiency in roentgen therapy.

Prior to July 1, 1960, those candidates desiring to be certified in either radiology or therapeutic radiology will be urged to take an examination in nuclear medicine.

Those candidates previously certified in roentgenology desiring to complete their certificates in radiology (including nuclear medicine) will be required to have the equivalent of six months full-time radium and isotope training in an approved department of radiology.

Prior to July 1, 1960, those candidates who have been previously certified in roentgenology and who do not desire to be examined in nuclear medicine must have the equivalent of three months full time radium training in an approved department of radiology.

EXAMINATIONS

Usually two examinations are held each year. At present, examinations are practical and oral. The examinations are designed to test the candidate's fitness to practice radiology or one of its branches as a specialty.

The examination consists of tests in film interpretation and an oral examination in pathology, physiology, radiophysics, and radiobiology, as well as the clinical application of roentgen rays, radium, and radioactive isotopes. The applicant is also examined in "professional adaptability," in an attempt to ascertain his attitude toward his fellow practitioners and his patients.

THE AMERICAN BOARD OF SURGERY

J. Englebert Dunphy, Chairman, Portland, Ore.
Harris B. Shumacker Jr., Vice-chairman, Indianapolis
Cletus W. Schwegman, Associate Secretary, Philadelphia
John J. McKeown Jr., Assistant Secretary, Philadelphia
Frank F. Albritten Jr., Kansas City, Kan.
J. Garrott Allen, Stanford, Calif.
Joel W. Baker, Seattle
Howard W. Bradshaw, Winston-Salem, N. C.
Charles G. Child III, Ann Arbor Mich.
Oliver Cope, Boston
Michael E. De Bakey, Houston
R. Kennedy Gilchrist, Chicago
William P. Longmire Jr., Los Angeles
K. Alvin Merendino, Seattle
William H. Muller Jr., Charlottesville, Va.
H. William Scott Jr., Nashville, Tenn.
William H. Snyder Jr., Los Angeles
Henry Swan, Denver
Robert M. Zollinger, Columbus, Ohio
John B. Flick, Secretary-Treasurer, 1617 Pennsylvania Blvd., Philadelphia 3
Gordon M. Loos, Executive Associate, Philadelphia

REQUIREMENTS FOR ADMISSION TO EXAMINATION
GENERAL QUALIFICATIONS

An ethical standing in the profession and a moral status in the community which are satisfactory to the Board.

Engagement in the practice of surgery.

PRELIMINARY TRAINING

Graduation from an approved medical school in the United States or Canada or from medical schools acceptable to the Board in other countries.

Completion of an internship (straight or rotating) of not less than one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association or its equivalent in the opinion of the Board.

SPECIAL TRAINING

The American Board of Surgery is guided by the evaluation of residency training programs made by the Conference Committee on Graduate Training in Surgery and does not itself conduct such surveys.

The Board interprets the term "general surgery" in a comprehensive manner and expects candidates to have knowledge of the basic principles applied in the management of fractures, head injuries, or other forms of trauma, and of the more common problems in plastic, gynecologic, orthopedic, neurologic, thoracic and urologic surgery.

Basic Sciences

It is fundamental to the concept of an approved residency in general surgery that the program provide for properly organized, integrated, and progressively graded clinical training in this specialty. This presupposes a continuity of clinical experience under the supervision of the surgical staff of the hospital or hospitals in which such training is conducted. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept these courses as part of a three or four-year residency program in lieu of clinical experience. Furthermore, the integration of basic sciences, particularly pathology, with clinical training is considered superior to formal courses in these subjects.

Senior Year

The most important single factor in the development of a surgeon is the opportunity under guidance and supervision to grow by progressive and succeeding stages to the stature of complete responsibility for the surgical care of patients. Major operative experience and senior responsibility are an essential part of surgical education and training. For this reason the Board cannot accept for examination candidates who have not had such experience in general surgery, regardless of the number of years in training.

Since a majority of residency training programs do not provide a sufficient accretion of operative experience and personal responsibility until the completion of the senior or final year, the Board requires that the candidate have had this senior year in order to become eligible for examination. Because it is recognized that some flexibility and well-considered experimentation are essential to progress in surgical, as well as other forms of education, the Examination Committee of the Board is prepared to give individual consideration to applicants whose training in general appears adequate although it may not meet all of the following specified requirements.

TYPES OF PROGRAMS

The requirements for examination may be fulfilled by either of two programs. These are considered to be minimal in attaining the purposes of the Board and do not preclude additional desirable educational experiences which may strengthen the individual residency training program.

The Board may at its discretion, require that a member of the Board, or other designated diplomate, observe and report upon the clinical performance of the candidate before considering his eligibility for examination or certification.

The Board reserves the right to require a candidate to submit a list of the operative procedures performed by him during his training period.

Group 1 Program

Completion of a graded residency in general surgery of at least four years' duration, including the senior year, in an institution or institutions acceptable to the Board and approved for four years of training by the Conference Committee on Graduate Training in Surgery is required.

An approved four-year residency may include a research project or an assignment to a basic science department such as pathology, physiology, or anatomy, provided this is an integral part of the program. The program must include at least three years of clinical surgery.

The Board accepts training of not more than one year's duration in "affiliate hospitals" as part of its basic formal educational requirements. Such "affiliate hospital" training must have been part of the graded residency program of an institution approved for four years by the Conference Committee. The senior year must have been spent in the parent institution holding the approval of the Conference Committee, except in those instances where the senior year in the "affiliate hospital" is, in the opinion of the Conference Committee, equivalent in training value to the senior year in the parent institution and is under the same supervision.

The candidate who completes only four years of an approved program designed for more than four years, and thus does not have the senior or final year of the residency, may submit his qualifications for special consideration by the Examination Committee of the Board. The Committee can recommend acceptance of the candidate for examination in Group 1 or Group 2, provided the evidence indicates the candidate has had adequate operative experience and clinical responsibility as certified by the Chief of Service.

Residency credit will be granted for surgical internship to a candidate who has completed a prior year of acceptable internship when the surgical internship is part of a graded program approved for four years by the Conference Committee.

Group 2 Program

Completion of a graded residency in general surgery of at least three years' duration including the senior year, in an institution or institutions acceptable to the Board and approved for at least three years of training by the Conference Committee on Graduate Training in Surgery is the basic requirement.

Residency credit will not be granted for separate periods of time devoted exclusively to research or a preclinical discipline although the day to day integration of these disciplines with clinical surgery is highly desirable. The program must have included three years of clinical surgery and the final year must have been spent in the capacity of senior or chief resident in general surgery.

Two additional years of training beyond the three years of residency to complete a total of five are necessary to meet the requirements for examination. These may include:

(*a*) Practice of surgery under acceptable supervision (preceptorship). By "acceptable supervision" is meant an arrangement with a preceptor acceptable to the Board who should inform the Board in writing of his willingness to assume responsibility for the candidate's further training. Before the candidate's eligibility for examination can be considered, he will be required to submit to the Board a list of the operative procedures performed by him during the period of supervised practice, and the preceptor will be requested to vouch for the candidate's integrity, surgical judgment, and technical skill. The acceptance of supervised practice in fulfillment of part of the Board's requirements will be contingent upon the candidate's having had adequate clinical opportunities to fortify residency training and considerable responsibility in the care of patients, including the performance of major operative procedures under supervision.

(*b*) The study of surgery and the basic sciences in an approved graduate school of medicine on a full-time basis and for a consecutive period of not less than one school year. Training credit in excess of twelve months will not be granted in this category.

If provision has been made to study a single basic science such as pathology, physiology, or anatomy, up to six months' credit may be granted for such study.

Credit may be granted for a maximum of twelve months spent in full-time surgical research under a responsible investigator who is acceptable to the Board. A candidate may not claim credit for both graduate study and research years.

(*c*) Further acceptable surgical residency or fellowship training, either in general surgery or in a recognized surgical specialty.

N.B.: Credit as outlined above under (*a*), (*b*), and (*c*) will be applicable only toward the two years of training which Group 2 candidates must complete in addition to three years of approved residency in general surgery. It will not be considered as basic residency credit.

MILITARY CREDIT

Credit not to exceed one year may be granted to those candidates who have served in military hospitals other than those approved for residency training, provided that the candidate has had a satisfactory surgical assignment with adequate and diversified clinical material and provided further that his work in surgery is carried out under the supervision of a surgeon acceptable to the Board. Any such credit will be considered preceptorship credit toward Group 2 re-requirements and not basic residency credit.

LICENSE TO PRACTICE

The Board requires, prior to issuance of a certificate, that candidates have a valid license to practice medicine except in those situations in the United States or Canada in which a license to practice is not required, such as the practice of surgery by commissioned officers in the Army Navy, or Public Health Services of these countries.

FOREIGN TRAINED CANDIDATES

In exceptional instances and after individual evaluation, the Examination Committee of the Board may grant some credit for foreign training.

APPLICATIONS

Prospective candidates for examination by the Board should carefully read the Board's requirements as set forth in the Board's Booklet of Information. If, after becoming familiar with the requirements, a candidate needs advice about his training, or believes he has completed the requirements, he should submit a brief chronological outline of his training, including precise dates, using the Evaluation Form which will be furnished on request.

Application for Examination forms are not forwarded until candidates are within several months of completing their training requirements and appear to have met all other requirements of the Board.

Applications should be returned by August 1 if consideration is desired for examination in Part 1 in December of the same year. Those desiring such consideration are urged to apply several months before completing their training requirements to enable the Board's office to process as many applications as possible before the August 1 registration deadline.

Candidates completing their training requirements after September 30 must await consideration for admission to the December Part 1 examination one year later.

The Board's acceptance of candidates for examination is based not only upon an evaluation of their training, but also upon information available to the Board concerning their professional ability as surgeons and their ethical standing.

Candidates are notified of their eligibility for the Part 1 examination when their applications have been approved, and subsequently are sent a list of examination centers from which to choose. Candidates are not eligible for the Part 2 examination until they have made a passing grade in Part 1.

THE FOUNDERS GROUP

The Founders Group, to which were admitted those who had already amply demonstrated their fitness as trained specialists in surgery, was closed in January, 1940.

EXAMINATION

The qualifying examination is divided into Part 1 (written) and Part 2 (oral). In both of these a knowledge of the practical application of the sciences fundamental to surgery is required.

PART 1

The examination is given simultaneously in as many centers throughout the United States as the Board may determine suitable for the purpose and sometimes by special arrangement in certain centers abroad. It is held once annually on the first Wednesday of December.

The Part 1 examination is of the objective, multiple-choice type, and is administered during a half-day session. This examination is designed to cover general surgical problems including the application of the sciences basic to surgery. Questions are of various types, and are based upon the analysis of case histories, cause and effect relationships, and other pertinent situations. The examinations are composed by members of the Board with the technical assistance of the Educational Testing Service.

PART 2

Examinations usually are held in ten different centers in the United States each year from September to June inclusive. These examinations are conducted by members of the Board and selected diplomates acting as guest examiners.

The Part 2 examination is oral and practical and requires the candidate's presence for one day. Candidates are examined in Clinical Surgery and in Basic Sciences, including diagnosis, management of patients, and the application of anatomy, pathology, physiology, biochemistry, and bacteriology to surgical problems. In pathology, emphasis is placed on an understanding of disease processes and their clinical implications. The identification of gross and microscopic lesions and the interpretation of roentgenograms also may be included.

RE-EXAMINATION

PART 1. Candidates who fail Part 1 are required to wait one year before they can be eligible for reexamination.

PART 2. Candidates who fail Part 2 in its entirety or in Clinical Surgery are required to wait one year before they can be eligible for re-examination. Those who fail only in Basic Sciences are required to wait six months.

Should a candidate fail a re-examination in Part 1, or a re-examination in Part 2 in its entirety or in Clinical Surgery, the Examination Committee will consider an appeal for the privilege of further examination after the lapse of two years, provided he has demonstrated initiative in furthering his professional development. The Board, however, on the basis of its judgment, may deny a candidate the privilege of further examination.

Candidates who fail a re-examination in Basic Sciences are required to wait one year before they can be eligible for further examination.

FEES

The fee for examination is $175 payable as follows: $25 for registration, $75 for Part 1 and $75 for part 2.

The fee for re-examination in Part 1 is $75. Fees for re-examination in Part 2 are as follows: $75 for re-examination in Part 2 in its entirety, and $50 for re-examination in Clinical Surgery only, or in Basic Sciences only.

The Board is a non-profit organization. All fees will be used, after a reasonable amount is set aside for necessary expenses, to aid in improving existing opportunities for the training of surgeons. The members of the Board, except the Secretary-Treasurer, serve without remuneration.

CERTIFICATION IN THORACIC SURGERY

Diplomates of the American Board of Surgery wishing to become certified in thoracic surgery are advised to communicate with the Secretary of the Board of Thoracic Surgery, Doctor William M. Tuttle, 1151 Taylor Ave., Detroit 2, Mich. This Board is an affiliate of the American Board of Surgery.

BOARD OF THORACIC SURGERY

(An affiliate of the American Board of Surgery)

John C. Jones, Chairman, Los Angeles
O. Theron Clagett, Vice-chairman, Rochester, Minn.
Anthony R. Curreri, Madison, Wis.
Rollin A. Daniel, Nashville, Tenn.
Edward M. Kent, Pittsburgh
Hiram T. Langston, Chicago
Herbert C. Maier, New York City
Robert R. Shaw, Dallas, Texas
John W. Strieder, Boston
Wm. M. Tuttle, Secretary-Treasurer, 1151 Taylor Ave., Detroit 2, Mich.

REQUIREMENTS FOR EXAMINATION

1. Certification by the American Board of Surgery.
2. Two years training in thoracic surgery approved by the Board of Thoracic Surgery, or meritorious contributions to thoracic surgery. One of these two years may be spent during the four years of training in surgery required by the American Board of Surgery.
3. Written and oral examination.

Definition of what is considered acceptable training in Thoracic Surgery.—To qualify for the examination in thoracic surgery, the candidate shall have had two years of training in an active, well-integrated thoracic surgical clinic or clinics, or the equivalent amount of thoracic surgical training, on a mixed service consisting of thoracic and non-thoracic surgical cases. Adequate training in both the tuberculous and non-tuberculous aspects of thoracic surgery is expected. In order to obtain this objective, combined residencies between institutions of different types may be advantageous. It is also required that the candidate be familiar with the basic sciences as related to thoracic surgery. Recently there have been a considerable number of applications in which the training has consisted largely of thoracic-cardiovascular surgery. It was decided by the Board some time ago that only six months' credit would be given for training in thoracic-cardiovascular surgery regardless of the time actually spent in this aspect of thoracic surgery. Under exceptional circumstances certain surgeons may, by virtue of recognized proficiency in the surgical treatment of thoracic diseases, qualify for the examination at the discretion of the Board.

APPLICATIONS

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the secretary's office, outlining briefly their training and experience in thoracic surgery and ask for an application form. An application form will not be sent unless evidence is submitted in the letter indicating that the prospective applicant appears to meet the minimum requirements.

EXAMINATIONS

The qualifying examinations are divided into two parts. Part 1 is written, and part 2 is an oral examination in clinical surgery, x-ray interpretation, and pathology.

Part 1.—This examination will be given simultaneously at least once a year in as many centers throughout the country as the Board may determine suitable for this purpose.

Part 2.—In order to be eligible for part 2 a candidate must have successfully completed part 1. Examinations in part 2 are conducted in certain centers of the country selected by the Board.

Candidates examined by the American Board of Surgery in part 1 (written examination) on or after October 26, 1955, who are certified by the American Board of Surgery, will be required to take only the oral examination given by the Board of Thoracic Surgery.

Candidates examined by the American Board of Surgery in part 1 prior to October 26, 1955, will be required to take part 1 (written examination) of the Board of Thoracic Surgery before taking its oral examination.

REEXAMINATIONS

Those individuals who fail part 1 or part 2 will be required to wait one year before they can retake the part which they failed. Those who fail twice will be required to wait for a period of two years. Candidates who are unsuccessful at three attempts will be required to wait three years before requesting reconsideration. The Board may at its discretion deny the candidate the privilege of reexamination.

Candidates declared eligible but who fail to exercise the examination privilege within three years of the date of filing the application will be required to file a new and current application and pay a new examination fee. Also a candidate who has failed in an examination (part 1 or part 2) and who does not apply for reexamination within three years shall be required to make a new application and pay a new examination fee.

FEES

For the special examination in thoracic surgery and the issuing of a certificate the fee will be $100. Fifteen dollars of this fee is to accompany the application and will be considered as a registration fee. It is nonreturnable to the applicant in case he is disapproved for examination. The fee for reexamination will be $50.

AMERICAN BOARD OF UROLOGY

Grayson Carroll, President, St. Louis
Donald A. Charnock, Vice-president, Los Angeles
Rubin H. Flocks, Iowa City
William P. Herbst, Washington, D. C.
Frank C. Hamm, Brooklyn
Wyland F. Leadbetter, Boston
Robert Lich Jr., Louisville Ky.
Hugh J. Jewett, Baltimore, Md.
William Niles Wishard Jr., Secretary-Treasurer, Indianapolis

REQUIREMENTS

A. Application for certification must be made on a special form provided by the Secretary. This shall be returned to him accompanied by other required data and credentials and by $75 of the examination fee. See Article VII, FEE.

B. The applicant must have graduated from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association and must have completed an internship of not less than one year in a hospital approved by this Council.

Requirements of graduates of foreign Medical Schools shall conform to and be similar to the requirements as demanded of the applicants for the accepted medical schools in the United States and Canada. Such applications will be considered by the full Board on individual merits.

C. The applicant must establish in a manner satisfactory to this Board that he is a physician duly licensed by law to practice medicine and that he is of high ethical and professional standing.

D. The applicant must establish that he has received special graduate training as follows:

1. An approved internship of at least one year.

2. *One year in the basic sciences or clinical studies basic* to Urology; or one year residency in general surgery or internal medicine, on an approved service.

3. An approved graduated three-year residency in Urology, leading to competency in all its phases.

Any formally integrated service may permit some variation on the one-year basic science, general surgery and internal medicine requirement, provided it is completed prior to the senior year.

E. Applicant must have an additional period of not less than two years in the practice of Urology in the city of his office or place of practice.

F. The applicant must assure the Board that he is engaged in the full time practice of Urology.

FEE

The examination fee is $175.00. (This fee will be increased when and if the expense of the examinations and other activities of the Board demand.) Seventy-five dollars must accompany the application. One hundred dollars must be paid when the application has been processed. Neither fee is returnable.

Applications for certification shall be examined by the Credentials Committee and reviewed by the Board. When additional data are required to complete the application, these will be requested by the Secretary.

If a candidate fails, he will be permitted a second examination after one year or within three years, without additional fee, but he must give sixty days' notice of his intention to appear for re-examination. A NEW group of case reports will be required, which do not duplicate previous submissions made to the Board. When an applicant has failed twice he may file a new application after two years and shall pay a second full fee.

A candidate who has been failed twice in any part of the examinations may be required to have additional training in accordance with recommendations from the full Board before he may be permitted further examination.

REQUIREMENTS FOR CERTIFICATION

The requirements for certification include: evidences of hospital practice including the presentation of reports of twenty-five representative (not necessarily consecutive) major urological cases from practice, which must contain all items essential for diagnosis, therapy, prognosis, results of treatment, etc.; a written examination; pathology and oral-clinical examinations.

A. Evidences of Hospital Practice and Case Reports.

An index, in consecutive order, of all major and minor urological surgery (including endoscopy) done during the last two years of practice must be presented. This index must be verified by the various hospital administrators.

The candidate must present twenty-five records of major urological cases completed since the candidate's residency training with hospital, names (or initials) and record numbers, in which the candidate has had complete charge, responsibility and activity in all phases of the patient's care. These reports must be typewritten on 8½" by 11" paper and in duplicate, but need not be on any special form. PLEASE FILE THE DUPLICATE IN YOUR OWN OFFICE. The second copy will be called for when and if it is needed.

Complete index lists must accompany the reports. If they are obtained from more than one hospital, a separate index list of each group should be provided. These lists must state the operator's name at the head of each page, the name (or initials) of the patient, the hospital number and the name and date of operation. Statements from the administrators of the hospitals attesting that the candidate was the operator must be included.

The candidate must PERSONALLY prepare the case reports, remembering that these are documentary evidence of his ability and that the material in them and the manner of presentation are important evidence of his competence as an Urologist.

The case reports must be received on or before September 1.

The case reports must be prepared as follows. Those not conforming to this outline will be returned for correction.

1. Heading: including identification of patient, hospital number and name or initial, age, marital status, sex, occupation, diagnosis, dates of hospitalization, date and name of operation, and outcome.

2. Complete history, including chief complaint, present and past history, family history, review of symptoms, etc.

3. Complete physical examination, including temperature, pulse, respiration and blood pressure, upon admission.

4. Initial laboratory and x-ray examinations must be recorded in detail.

5. Admitting diagnosis, based on above, with reasons for making this diagnosis.

6. Indications for further management and description of same in chronologic order, together with finding and outcome, as they occurred. This should include detailed description of all subsequent laboratory and x-ray findings, final pre-operative diagnosis and reasons for same.

7. Major and minor surgical procedures shall be described in detail. A detailed description of all other treatment and findings such as administration of drugs and fluids, morbidity, complications, consultations, use of special drainage, etc., shall be recorded.

8. A detailed description of the post-operative course, including complications and outcome shall be given. If autopsy is done this should be reported.

9. An adequate follow-up of patient's course after dismissal from the hospital.

10. Final summary of the case.

This must include the candidate's interpretation of the record in terms of pathology; the basis for diagnosis; the facts that determined the treatment prescribed, whether surgical or otherwise; the course of treatment to be pursued following discharge from the hospital or clinic; and a critical discussion of the knowledge gained from the management of the case.

11. The entire record should be compiled as chronologically as possible and *must* contain dates of all data.

12. The candidate will be required to include a statement that he has personally prepared and edited the case reports.

B. Written Examination: The written examination is designed to test the candidate's preparation in and his knowledge of the whole field of Urology, including the subjects: clinical Urology, pathology, anatomy, physiology, embryology, bacteriology, physiological chemistry, and endocrinology. These may be held on certain dates simultaneously in different parts of the country at places convenient for candidates.

C. Pathology: The examinations in pathology will consist of the identification of gross specimens and of sections of tissue observed through the microscope. It will be held at the time of the oral examination.

D. Oral-clinical examination: This will consist of discussion of urological problems. The subjects forming the basis of this examination are urography; diseases of the genital organs, including the prostate and each portion of the urinary tract and the adrenals. It will ascertain the candidate's familiarity with recent literature, the breadth of his clinical experience and his general qualifications for the practice of Urology.

The professional adaptability of each candidate will be investigated in an attempt to determine his ethical conduct and his attitude toward his patients and fellow practitioners.

THE CONFERENCE COMMITTEE ON GRADUATE TRAINING IN SURGERY

GUEST EDITORIAL

Warren H. Cole, M.D.

THE Conference Committee on Graduate Training in Surgery sponsored by the American Board of Surgery, the American College of Surgeons, and the American Medical Association was organized to evaluate residency programs in surgery. There is apparently confusion in the minds of some physicians as to the activities and accomplishments of this committee.

Records indicate, as shown in the table below, that in 1951, the first year of the Committee's activities, 224 four-year programs and 258 three-year programs were approved, with a total number of 3,877 residency positions available. In 1958 records indicate that 329 four-year programs and 198 three-year programs were approved with a total number of 5,316 residency positions available. Lest it appear from these figures that approval of three-year programs is being curtailed, we wish to emphasize, as will be noted later, that in 1958 alone 19 three-year programs were elevated to a four-year program.

The 5,316 residency positions available in 1958 compared to the 3,877 available in 1951 represent an increase of 38.7%, which is considerably greater than the increase in number of medical school graduates during this seven-year period; for example, there were 6,135 graduates in 1951 compared to 6,861 in 1958 or an increase of 11.6%. The increase per year in the total number of positions made available is surprisingly similar from one year to another; for the three biennial periods shown in the table it was 449, 331, and 625 respectively. In addition to the 5,316 residency positions made available in 1958, there were 19 additional type IV hospitals offering a one-year residency in pediatric or oncologic surgery. There was an additional group of 126 hospitals (317 positions) approved by the American Medical Association for one to two years.

In 1958 records indicate that 20% of all residencies were filled with foreign graduates. We do not have the exact number of foreign graduates in our general surgical residencies, but we have no reason to believe it would be much different than the figure for all specialties. Also, records indicate that 8% of the general surgical residencies were unfilled. We believe these figures offer good evidence to the effect that there would be no logic in increasing the number of programs any more rapidly than is being done, since there would be no qualified candidates to fill them.

Records also show that in 1958 seven residency programs were disapproved, but only after they had received warning of certain deficiencies which were not corrected in due time. However, during this period 26 programs were given original approval or reapproval. The few in the reapproval group had been disapproved at some previous time but were encouraged to improve their programs and reapply; this they did successfully. These data are presented to show that the committee strives to improve programs and not disapprove them. If all programs were approved with no consideration as to quality it would be agreed by all that a program of evaluation and accreditation would be meaningless and worthless.

Residencies Approved in General Surgery by the Conference Committee

	1951	1953	1955	1957	1958
No. of 4-yr. programs	224	239	263	307	329
No. of 3-yr. programs	258	245	225	202	198
Total no. of programs	482	484	488	509	527
Positions available in 4-yr. programs	2,294	2,759	3,232	4,063	4,222
Positions available in 3-yr. programs	1,583	1,567	1,425	1,219	1,094
Total positions available	3,877	4,326	4,657	5,282	5,316

The Committee appreciates that the majority of four-year programs are better teaching programs than most three-year programs, but is convinced that the three-year programs can offer good training and has no intention of discontinuing them. Some of the hospitals with three-year programs do not have adequate staff or clinical material to set up a four-year program. Furthermore, in many instances the chief of surgery is so frequently rotated that continuity of the teaching program is difficult to obtain. The Committee makes all possible effort to promote a three-year program to a four-year program as rapidly as possible; this is corroborated by the fact that, in 1958, 19 programs previously approved for three years were raised to a four-year residency. Records also reveal that more than two-thirds of the approved programs have no medical school attachment, and many of the one-third which do have an affiliation do so only at an undergraduate level, meaning their administration and professional staff are independent of a medical school. This should also serve to indicate that the Committee looks favorably on the "smaller" hospitals of the community type and appreciates the fact that they are serving an excellent purpose in the teaching of surgical residents.

The Conference Committee has written a Guide Book, which has been approved by its three sponsoring agencies, and distributes it on request. This booklet was not designed as a book of rules, but was formulated to offer suggestions to those concerned with residency training. The Conference Committee has no official connection with the Joint Commission on Accreditation of Hospitals, but before applying for approval of their residency programs hospitals should first meet the requirements of the Joint Commission.

ANNUAL REPORT AND DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES

The 33rd Annual Report on Internships and Residencies published in this issue of THE JOURNAL follows the format for previous years, but provides certain additional information not previously published pertaining to the support of residency training programs. Additional information is supplied on the distribution of foreign medical graduates in residency programs. A chart and narrative analysis of the growth of both internship and residency programs since World War II has been prepared to indicate the relative role played by the entry of the federal government in the field of graduate training in 1946 and also the increasing proportion of both internship and residency positions filled by foreign medical graduates as a result of the Exchange-Visitor program authorized by the United States Information and Educational Exchange Act of 1948.

There are indications that perhaps there may be a leveling-off in some phases of these programs. The increase in available internships and residencies was less than last year. There was no significant increase in intern stipends for the first time in five years. There may be a decrease in the number of foreign medical graduates available in the immediate future.

As the Council on Medical Education and Hospitals improves its techniques of securing and analyzing data concerning training programs, these data will be presented for the guidance of training program directors and medical administrators concerned with program trends and planning for the future. The format of the Directory of Approved Internships and Residencies will be improved whenever possible.

Figure 2 of the Annual Report on post-World War II growth of programs indicates at a glance the progressively heavy responsibilities carried by the staff of the Council, its field representatives who are responsible for program surveys, and the review committees which evaluate the survey reports and determine the future status and appropriate methods of listing an ever-increasing number of training programs.

THE FOREIGN MEDICAL GRADUATE

At the recently concluded Second World Conference on Medical Education, some distinguished foreign medical educators expressed dissatisfaction with the training their medical graduates were receiving in the United States as interns and residents. On the other hand, there is widespread dissatisfaction in the United States at the performance of many foreign physicians now holding appointments in approved graduate training programs in American hospitals.

Two recent actions will unquestionably bring about improvement. A foreign medical graduate who comes to the United States on the Exchange-Visitor program can no longer remain in this country as a "chronic student" in the hopes of remaining here permanently, but must return to his homeland after five years of American study. The target date for the Educational Council for Foreign Medical Graduates certification for all foreign graduates serving approved internships or residencies in this country is July 1, 1960. The certification process will assure hospital staffs and administrators that the foreign medical graduates so certified have had acceptable prior training, have competence with the English language, and have satisfactory professional qualifications. Foreign graduates so certified should unquestionably receive greater attention from the directors of training programs and should make far greater progress in assumption of responsibility for patient care and comprehension of the capabilities the American medical profession expects of all physicians trained in the American system. The foreign graduates thus trained up to a five-year maximum would accordingly return to their homelands with the realization that they have received the best we can offer instead of with the feeling that they have been abused for purposes of service, as has been undoubtedly true in some instances in the past.

There is no question but that the five-year cut-off date to be enforced by the State Department and the certification process of the Educational Council for Foreign Medical Graduates will reduce the pool of foreign medical graduates available for service as interns or residents in the future. This reduction, however, will affect the poorly qualified graduate student and the one who will accept any position in order to remain in this country contrary to the intent of the Congress.

Every administrator and director of an approved internship or residency program should be thoroughly familiar with the sentence contained in the statement on the Present and Future Status of Foreign Medical School Credentials in the United States. This statement represents the official policy of the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, and the Federation of State Medical Boards, and was published in The Journal July 19, 1958, pages 1526 to 1528. The sentence is as follows:

"Regardless of the date of appointment, it is expected that all graduates of foreign medical schools serving as interns or residents in U. S. hospitals as of July 1, 1960 will have been certified by ECFMG."

HOSPITAL DIRECTOR OF MEDICAL EDUCATION

During recent years, there has been a growing realization on the part of hospital administrators as well as hospital medical staffs that the proper coordination of internships and residency training programs, particularly in community hospitals not affiliated with medical schools, could best be served by the employment of a highly qualified physician paid specifically for the performance of this task. The most common term for such an individual is director of medical education, or oftentimes director of medical education and research. The most successful of these positions are full time in the hospital, and those holding such positions are usually clinicians, most often internists.

While the Council has never stated that the maintenance of fully approved intern and resident training programs depended on the creation of such positions in the hospitals concerned, nevertheless it recognizes the merit of such positions and encourages their creation where desired.

A young organization in this field is rapidly attaining a position of influence. The name of the organization is the Association of Hospital Directors of Medical Education, and it is listed in the Guide Issue of *Hospitals*. The guide is further described in a separate editorial in this issue of The Journal. This organization holds its annual meeting in Chicago just prior to the Congress on Medical Education and Licensure in February of each year. The purposes stated in its Constitution and Bylaws are (*a*) to nurture the growth and development of sound programs of medical education in community hospitals; (*b*) to accomplish this end through a free exchange of ideas on common problems among community hospital education program directors; and (*c*) to convince by persuasion and example the medical staffs of community hospitals, regional medical societies, hospital administrators, and hospital administration groups of the value and necessity of formally organized and directed education programs to achieve and maintain the highest standards of community hospital medical care.

While the Council does not at this time provide any literature describing the functions and responsibilities of a hospital director of medical education, such a document will undoubtedly be issued by the appropriate bodies in the future. In January, 1959, a two-day workshop conference was held between representatives of the Association of Hospital Directors of Medical Education and representatives of the Council on Professional Practice of the American Hospital Association, Council on Medical Education and Hospitals of the American Medical Association, and Executive Council of the Association of American Medical Colleges. A transcript of the proceedings of this conference has been published in pamphlet form by the American Hospital Association. The availability of this pamphlet will be announced by the American Hospital Association in the near future.

HOSPITAL FACTS FOR PHYSICIANS

The Council on Medical Education and Hospitals of the American Medical Association and the American Hospital Association cooperate in joint mailing of their annual questionnaires on hospital programs. Most physicians are probably unaware that the statistics gathered in this manner by the American Hospital Association are published in August in the Guide Issue of *Hospitals*. Repeated here are highlights from the tables in the report on Hospital Statistics for 1958:

"The 6,786 hospitals in the continental United States reported a total of 1,572,036 beds. The total number of admissions to these hospitals was 23,697,157. Since some individuals may have been admitted more than once, the total number of persons receiving hospital care during the year is unknown. The estimated average number of patients in all hospitals each day was 1,322,938, an occupancy of 84.2 per cent. A total of 3,742,028 births was recorded by 4,992 of the hospitals. Hospitals with less than 50 beds comprised 36 per cent of all hospitals, and reported 11 per cent of all admissions.

"In the 5,290 nonfederal hospitals providing predominantly short-term care, there were 609,732 beds and 21,683,528 admissions during 1958. On the average, 451,144 patients were in these hospitals each day; the average occupancy was 74.0 per cent and the average patient stay was 7.6 days.

"For all listed hospitals total assets were in excess of $15 billion in 1958. Total expenses exceeded $7 billion, of which $4.7 billion, or 65 per cent, were for payroll.

"Total expense per patient day averaged $14.74 for all hospitals, with the voluntary short-term hospitals at the high end of the range with $28.27 and nonfederal psychiatric hospitals at the low end of the range with $4.40.

"Of all hospitals with 25 beds or more, 58 per cent were accredited. In the nonfederal short-term hospitals of this size, 61 per cent were accredited; while in the voluntary hospitals of the short-term group 73 per cent were accredited, with 100 per cent accreditation in the hospitals with 300 beds or more. Over 78 per cent of all listed hospitals are members of the American Hospital Association.

"There were 1,464,829 full-time workers in all listed hospitals. (This figure includes full-time equivalents for part-time employees.) For all listed hospitals, there were on the average 111 personnel per 100 patients, representing a range from 224 personnel per 100 patients in voluntary short-term general hospitals to 34 personnel per 100 patients in nonfederal psychiatric hospitals.

"In 1958 over 236,000 graduate professional nurses were employed full-time in hospitals; in addition, nearly 65,000 were employed part-time. Other nursing personnel totaled nearly 417,000 full-time and slightly over 34,000 part-time.

"Each of the following facilities and services was reported by more than 90 per cent of the short-term nonfederal hospitals reporting: Basal Metabolism Apparatus, Clinical Laboratory, Electrocardiograph, Emergency Room, Medical Records, Operating Room, and Diagnostic X-Ray. A newer type of facility, the Intensive Care Unit, was reported by 9 per cent of these hospitals."

EMERGENCY SERVICE BY AIR

Providing medical care for the sick and injured in times of emergency is a dual responsibility for the doctor. While such action is implicit in his role as physician, he also has the personal responsibility—as has each member of the human community—to succor those of his fellows who may be in distress.

The medical challenge presented by an emergency is one that physicians have provided for in many ways. Individually, each has accepted calls from those in need—and medical societies, hospitals, and public safety officials have long maintained lists of doctors willing to reply to emergency calls. In rural areas, physicians have installed short-wave radios in their automobiles so that they can be summoned by peace officers if they are needed. And many county and state societies also boast disaster plans for mobilizing medical help for victims of catastrophe.

A Medicine at Work report on page 633 outlining the activities of doctors aloft describes yet another form of emergency service that physicians hope to offer to the American people. The plan of enlisting more than 1,500 physicians, each capable of flying his own plane to the scene of a disaster, is both imaginative and broad in scope. These highly mobile units in every state offer a potential medical force that can be used selectively for emergencies of any magnitude in almost any location.

No one has suggested to these doctors that the formation of such a service is a duty. It is being undertaken voluntarily in the belief that it will prove useful. Under these conditions, it typifies public service at its best.

COUNCIL ON MEDICAL EDUCATION AND HOSPITALS

POLICY ON APPROVAL OF INTERNSHIP PROGRAMS

This is a statement of the policy of the Council on Medical Education and Hospitals regarding approval of internship programs, and includes a description of the evaluation process.

The basic requirements for approval of a satisfactory internship training program are contained in the current revision of "Essentials of an Approved Internship." This pamphlet is available at no charge on request to the Council. A basic requirement is that a hospital should be accredited by the Joint Commission on Accreditation of Hospitals before applying for an approved program.

If a hospital staff feels it can organize an acceptable program in accordance with "Essentials," an application blank will be forwarded on request to the Council, and this blank must be returned for preliminary review. If preliminary review of the application blank indicates that the hospital may satisfy the minimum requirements for approval, then an entry is made in the master record system at headquarters indicating that the application has been accepted and initiating the process of scheduling the hospital for a survey visit by one of the field representatives of the Council staff.

Approximately one month before the date set for the survey visit, the hospital is notified of the specific date and hour of arrival of the field representative and any further instructions are included in that letter.

The report of the survey of the field representative along with all supporting data furnished by the hospital is then returned to the Council offices where it is again reviewed and then forwarded to one or more representatives of the Internship Review Committee. This preliminary review is then returned to the Council headquarters with any additional notes or suggestions or requests for additional data.

If the preliminary review by the committee member indicates that there are deficiencies in the program as presented which might lead to adverse action by the full committee and by the Council, a letter is written to the hospital enumerating the deficiencies and inviting clarification or the submission of additional data to strengthen the application.

The Internship Review Committee meets at least twice yearly and makes recommendations on each program to the Council. Final action is taken by the Council and the hospital is notified of this action from the Council headquarters.

The Council may approve, approve provisionally, disapprove, defer action, or place a program on probation.

When a training program is not yet in full operation but shows promise of meeting all educational requirements, the program may be granted provisional approval, subject to relatively early review.

In the event of any action other than approval, specific reasons for such action are stated in the letter of notification and specific instructions are given as to the deadline dates on which additional action by the hospital is necessary in order to preserve the approved status of the program.

When a training program does not meet the requirements for continuation of approval, but has the potential for doing so, that program may be placed on probation until requirements are met. A period of 12 to 18 months is generally allowed for correction of deficiencies. If correction has not been accomplished by the specified date, appropriate action will be taken.

An approved program may be dropped for a variety of reasons from the Directory of Approved Internships published annually in the Internship and Residency number of The Journal. The hospital may itself request discontinuation of the program. By direction of the House of Delegates, the Council applies the "one-fourth" rule which states that any program which has failed to obtain at least one-fourth of its established quota of interns for two successive years may be disapproved. Such programs are accordingly dropped from the listing in the Directory. Some programs are dropped from the listing when those responsible fail to reply to requests for information and after ample warning of deficiencies. All such notifications from the Council are sent both to the hospital administrator and to the chairman of the training committee. Failure to reply is taken by the Council as an indication that the hospital authorities choose to allow the program to lapse.

The appeal procedure from an adverse action of the Council is always clearly stated in the confidential letter of notification. The letter may request clarification of areas on which there may be misunderstanding, or it may specify the deficiencies in the program which must be corrected if approval is to be maintained. It is the established policy of the Council that sufficient time be allowed for correction of deficiencies or clarification of misunderstandings so that no program need be dropped from the listing of approved programs except by default of hospital personnel. The appeal procedure may take the form of simple exchange of correspondence, but the Council staff is always available for personal consultation at the request of those concerned.

There are rarely occasions when, because of deadline dates for publication of the Directory of Approved Internships and Residencies, a previously disapproved program secured reapproval too late for inclusion. Such newly approved but unlisted programs are listed in the supplementary list published by the NIMP each year in December and mailed to all senior medical students. The Council plans on issuing a supplementary list early in January to serve the dual purpose of assisting such hospitals in their recruitment efforts and also to reassure current incumbents of such internships that they should be credited with having served in approved programs.

RESIDENCY TRAINING PROGRAMS IN RADIOLOGY

The Residency Review Committee for Radiology, on recommendation of the American Board of Radiology and the Council on Medical Education and Hospitals of the American Medical Association, is now approving residency training programs for three years in radiology, diagnostic roentgenology, or therapeutic radiology. Departments wishing to be approved in one or more of these categories will be examined specifically with these training programs in view. Further information as to application procedure, content of application forms, and method of listing in the Directory of Approved Internships and Residencies will be published as developed by the Residency Review Committee.

MEDICAL NEWS

CALIFORNIA

Symposium on Aviation Medicine.—Medical problems in manned space flight, commercial jet operations, and military aviation will be analyzed by experts at an aviation medicine symposium meeting Oct. 28-30 at the Miramar Hotel, Santa Monica. Physicians, engineers, and scientists at the University of California Extension conference will hear reports on the selection of space astronauts, problems of space radiation, and physical demands on commercial pilots, according to chairman Dr. Bruce V. Leamer, Los Angeles. Speakers will include General Otis O. Benson, commandant of the Air Force School of Aviation Medicine; Mr. Robert Gilruth, director of the Space Task Group, National Aeronautics and Space Administration; Mr. John E. Smith, research chief of the Federal Aviation Agency; and the medical directors of major airlines and aircraft companies. Scott Crossfield, chief test pilot for North American Aviation, will address the Oct. 28 dinner meeting. Information and registration forms may be obtained from Department of Continuing Education in Medicine, UCLA Medical Center, Los Angeles 24.

IDAHO

Dr. Rossomando to Tour Europe.—Dr. Alfred H. Rossomando, of Nampa, will be among the 60 Americans to fly from New York on Oct. 16 for a 10-day overseas study tour of Radio Free Europe's broadcasting facilities. Dr. Rossomando is the Idaho state chairman for the Crusade for Freedom, which sponsors the trip. A private nonprofit organization, Crusade for Freedom supports RFE's anti-communist broadcasts to the Iron Curtain countries of Poland, Czechoslovakia, Hungary, Romania, and Bulgaria. No crusade contributions are used to finance the trip. Attending urologist of Mercy and Samaritan Community Hospitals in Nampa, Dr. Rossomando is director of the Canyon County American Cancer Society, the Nampa American Red Cross, and the Nampa United Fund. Members of the group will be briefed on operations and will inspect RFE's installations in Munich, Germany. One day will be spent at the West German-Czechoslovak border. Side trips will be made to SHAPE headquarters and to Lisbon, Portugal, for a day's inspection of RFE's shortwave transmitter plant.

LOUISIANA

Meeting on General Practice.—The Louisiana Academy of General Practice will hold its 13th annual scientific assembly on Oct. 20-22 at the Capitol House in Baton Rouge, Dr. Francis I. Nicolle, of New Orleans, secretary, announced. The night preceding the opening of the assembly, academy members and guests will be entertained by Dr. and Mrs. Esmond A. Fatter, of New Orleans, president of the academy and president of the auxiliary, respectively. They will be co-hosts with Dr. Joseph W. Crookshank, of Lake Charles, president-elect, and Mrs. Crookshank. The Congress of Delegates of the academy will be in session on the morning of Oct. 20. The scientific portion of the program has been accepted for 11 hours category I credit by the American Academy of General Practice. Speakers will include Dr. Nicholas J. Chetta, New Orleans; Dr. Carl A. Nau, Galveston, Texas; Dr. Vincent P. Collins, Houston, Texas; Dr. Joseph A. Sabatier Jr., Baton Rouge; Dr. Robert I. Wise, Philadelphia; Dr. Philip Thorek, Chicago; and Dr. Irving Redler, New Orleans. Two medical films will round out the scientific program. On Oct. 21, the Louisiana academy will hold its annual installation dinner. Sixty Pharmaceutical and allied companies will present technical exhibits during the meeting.

MASSACHUSETTS

Medical History Meeting.—The next meeting of the Benjamin Waterhouse Medical History Society will be held at the Massachusetts Memorial Hospital Monday, Oct. 19. Speaker at the evening session will be Dr. Harry S. Goldsmith, Third (Boston University) Surgical Service, Boston City Hospital, who will present "Facinating Events in Human Dissection." All interested persons are invited to attend the medical history session. For information, write Dr. John J. Byrne, 818 Harrison Ave., Boston 18, Secretary.

NEW YORK

Report on Poliomyelitis.—The New York State Health Department announced Sept. 11 that 36 new cases of poliomyelitis, 16 of them paralytic, were reported in Upstate New York during the week ending Sept. 10. In the corresponding period in 1958, 13 cases of poliomyelitis, 11 paralytic, were reported. From the first of the year through Sept. 10, a total of 156 cases of poliomyelitis has been reported, compared with 85 last year and an average of 832 for the years 1951 through 1953. Ninety-

---

Physicians are invited to send to this department items of news of general interest, for example, those relating to society activities, new hospitals, education, and public health. Programs should be received at least three weeks before the date of meeting.

eight of this year's cases have been paralytic, compared with 55 for the same period last year, and an average of 448 for the years 1951 through 1953. Six of last week's 16 paralytic cases occurred in persons having three injections of the Salk vaccine. So far this year 26 of the 98 paralytic cases have occurred in persons having at least three injections of the Salk vaccine.

New York City

Dr. Cipollaro Honored.—Dr. Anthony C. Cipollaro, director, department of dermatology and syphilology, New York Medical School, will receive the annual Gold Medal Award from the Italian-American Charitable Society, Inc., of Boston, given each year to a "distinguished American of Italian ancestry who has made notable contributions to the progress, defense and welfare of the Nation." The award will be made Oct. 11. This is the first year since the inception of these awards in 1945 that a medical man has been honored by the society. Some of the previous recipients of this award have been the late Enrico Fermi, scientist; Gen. Ralph A. Palladine, chief of the U. S. Army Reserves; Mr. Lou Perini, industrialist and philanthropist; Judge Michael A. Musmanno, of the Pennsylvania Supreme Court; and Rt. Rev. Luigi G. Ligutti, of Des Moines, Iowa.

NORTH CAROLINA

Program in Cancer Chemotherapy.—A training program designed to produce research specialists in the chemical treatment of cancer has been established at the Duke University Medical Center, Durham. Financial support will come from U. S. Public Health Service funds scheduled to total $277,540 during the next five years. Dr. Ralph W. Rundles, head of the Duke Medical Center's hematology laboratory, is director of the program. The Duke program will train physicians to study new anticancer compounds in comparison with established agents. Specialists prepared for this work will have training in internal medicine, two years' study in chemotherapy and hematology, and additional work in biochemistry. The program will include training activities at the medical undergraduate, postgraduate, and hospital junior staff levels. From three to six persons will enter the program each year, beginning in January, 1960. Other activities of the program will include chemotherapy lectures, seminars, and postgraduate courses for practicing internists and hematologists.

PENNSYLVANIA

Dr. Stout to Conduct Tumor Seminar.—On Oct. 23 at the fall meeting of the Pennsylvania Association of Clinical Pathologists in Pittsburgh, Dr. Arthur P. Stout, emeritus professor of surgical pathology, at Columbia University College of Physicians and Surgeons, New York City, will conduct a tumor seminar. A limited number of slide sets are available. Requests for slides, accompanied by a check for $10 made payable to Pennsylvania Association of Clinical Pathologists, should be sent to Dr. W. Glenn Reed, West Penn Hospital, Pittsburgh 24.

Personal.—Dr. Richard J. Cross, assistant dean, Columbia University College of Physicians and Surgeons, New York City, was appointed associate dean of the University of Pittsburgh School of Medicine. He also became assistant professor in the department of medicine. Both appointments were effective on July 1.——Dr. Fred C. Kluth, Austin, Texas, director of the training division, Texas State Health Department, on Sept. 19 began serving as medical director of the Southeast District of the Allegheny County (Pittsburgh) Health Department. Dr. Kluth is a fellow of the American Public Health Association.

Annual State Session in Pittsburgh.—The 109th annual session of the Medical Society of the State of Pennsylvania will be held Oct. 18-23 at Penn-Sheraton Hotel, Pittsburgh. Panel discussions and moderators to be presented at the general sessions are as follows:

Present-Day Management of Diabetes, Dr. Garfield G. Duncan, Philadelphia.
Iatrogenic Aspects of Urinary Tract Infection, Dr. Theodore R. Fetter, Philadelphia.
Reversible Hypertensive Disease, Dr. William A. Jeffers, Philadelphia.
Rehabilitation of the Patient Disabled with Cerebrovascular Disease, Dr. William Dunbar, Philadelphia.

A symposium, "Disaster Medical Care," moderated by Dr. Leroy A. Gehris, Reading, will be presented at the Oct. 21 general practice session. Dr. C. Wilmer Wirts, president of the society, will preside at the general session the afternoon of Oct. 21. Speciality group meetings are arranged. The 12th annual state dinner will be held Oct. 20 ($7.00). Scientific and commercial exhibits are planned. For information, write Mr. Lester H. Perry, 230 State St., Harrisburg, Pa.

Philadelphia

Annual Alumni Dinner.—The annual medical alumni-faculty-senior class dinner of the University of Pennsylvania will be held in the University Museum Nov. 7, 6 p. m. Details and reservations can be secured through the dinner chairman, Dr. Alan Rubin, Department of Obstetrics and Gynecology, University Hospital, Philadelphia 4.

SOUTH DAKOTA

Pheasant Hunt and Medical Seminar.—The fifth annual Huron District Medical Society Pheasant Seminar will be held Oct. 17 and 18 in Saint John's

Nurses Home Auditorium, Huron. The South Dakota pheasant season opens at noon, Saturday, Oct. 17. Daily bag limit will be five birds. The scientific program is as follows:

Upper Gastrointestinal Hemorrhage, Dr. Benton A. Holm, Moline, Ill.
Hunting Accidents of the Eye, Dr. William R. J. Kilpatrick, Huron.
The Etiology and Prevention of Cardiac Arrest, Dr. Richard C. Wunschel, Moline, Ill.
Diagnostic Tests in Anemia, Dr. Robert F. Schilling, Madison, Wis.
Soft Tissue Injuries, Dr. Robert E. Van Demark, Sioux Falls.
Unilateral Exophthalmus, Dr. Leon J. Bullock, Huron.

Registration fee is $10. Arrangements for hunting or housing accommodations are not made by the society. The Huron Chamber of Commerce will help in this respect. For information, write Dr. F. D. Leigh, Secretary-Treasurer, Huron District Medical Society, Huron Clinic, Huron, S. D.

GENERAL

Neuropsychiatric Meeting in New Orleans.—The 35th annual convention of the Central Neuropsychiatric Association will be held Oct. 16-17 at the Hotel Roosevelt, New Orleans, under the presidency of Dr. Hamilton Ford, Galveston, Texas. Fifteen papers are scheduled for presentation on the program. The presidential address will be given by Dr. Ford at the executive session, the afternoon of Oct. 16. The annual banquet will be held at 7:30 p. m., Oct. 16. Registration fee is $20. A ladies' program is arranged.

Invite Applications for Blood Research.—The Hematology Research Foundation invites application for grants-in-aid for hematologic research for a period of one year. Applications must be submitted no later than Nov. 27 to Hematology Research Foundation, 64 W. Randolph St., Chicago 1. Awards will be announced by the medical advisory board. They will only consider grants up to $3,500, including overhead, and preference will be given to applications from the Chicago region, "unless it is an application of some unusual promise." The board will choose the applicants on the basis of the proposed research project. Nine copies of applications are requested (forms are available on request.)

Western Orthopedic Meeting.—On Oct. 18-22, the 23rd annual meeting of the Western Orthopedic Association will be held at the Brown Palace Hotel, Denver, under the presidency of Dr. William F. Stanek, Denver, who will present the presidential address the morning of Oct. 20. Over 30 papers are scheduled. A discussion on radioactive isotopes is planned for Oct. 21, with the following Denver participants (and specialties): Dr. Thad P. Sears (basic physics), Dr. Robert W. Lackey (medicine), and P. W. Jacoe, A. B. (industry). Exhibits are planned, and a ladies' program and golf tournament are arranged. For information, write the Western Orthopedic Association, 354 Twenty-First St., Oakland 12, Calif.

Eastern Psychiatric Meeting.—The fourth annual meeting of the Eastern Psychiatric Research Association, Inc., will be held Oct. 23-24 at the Waldorf-Astoria Hotel, New York City. A panel discussion, "Neuropsychiatric Aspects of Space Medicine," will be held the afternoon of Oct. 23, moderated by Dr. Robert L. Williams, Gainesville, Fla. Two symposiums are planned for Oct. 24: "Chemical and Behavioral Aspects of Psychoses," and "Genetics of Disordered Behavior," with Dr. William Malamud, New York City, and Drs. Theodore Robie, East Orange, N. J., and Franz Kallmann, New York City, serving as chairman and co-chairmen, respectively. The four papers at the first symposium will include "Adrenalin Metabolism in Schizophrenia," by Dr. Abraham Hoffer, Saskatoon, Saskatchewan. For information, write the Eastern Psychiatric Research Association, Inc., 40 Fifth Ave., New York City.

Medical Assistants Meeting in Philadelphia.—The third annual convention of the American Association of Medical Assistants will be held at the Benjamin Franklin Hotel, Philadelphia, Oct. 16-18. At the luncheon Oct. 16, Dr. Robert L. Schaeffer will present "The Golden Touch of the Pennsylvania Dutch." The banquet speakers that evening will be Dr. Louis M. Orr, President, American Medical Association presenting, "Greetings from the American Medical Association," and Dr. Robert J. Samp, Madison, Wis., speaking on "Medical Assistants Anonymous." Dr. Steward H. Smith, San Diego, Calif., will moderate an afternoon seminar Oct. 17 with Dr. Frank A. Elliott, Philadelphia, presenting, "Changing Patterns in Medicine." A medical technical panel discussion will be moderated by Dr. Robert A. Royster, Evansville, Ind., the morning of Oct. 18. Registration fee is $16. The executive office of the association is at 510 N. Dearborn St., Chicago 10. Mrs. Stella Thurnau is executive secretary.

Scholarships for Negro Students.—To "help lessen the nation's shortage of Negro physicians and surgeons," the Alfred P. Sloan Foundation granted $60,000 for 10 four-year medical school scholarships to promising Negro college students. Announcement of the awards for the 1960-1961 academic year was made by Arnold H. Zurcher, Ph.D., executive director of the foundation, and Dr. Franklin C. McLean, emeritus professor of physiology at the University of Chicago, The School of Medicine, and secretary-treasurer of National Medical Fellowships, Inc., Chicago. Since it was founded in 1946, National Medical Fellowships has awarded $819,333 in fellowships, scholarships, and loans to 262 Negro men and women striving for medical careers. The National Medical-Sloan Foundation scholarships will be offered only to "talented Negro students who have demonstrated outstanding academic ability in college, scored high in the Medical College Admission Test, which will be held next Oct. 31, and have been accepted for admission to medical school." Besides tuition payments, the awards provide stipends to needy scholarship winners. For information, write the National Medical Fellowships, Inc., 951 E. 58th St., Chicago 37.

Prevalence of Poliomyelitis.—According to the National Office of Vital Statistics, the following number of reported cases of poliomyelitis occurred in the United States, its territories and possessions in the weeks ended as indicated:

Area	Sept. 12, 1959		Sept. 13 1958

Physicians Meet in Providence.—The American College of Physicians will hold a regional meeting for New England, Quebec, and the Atlantic Provinces at the Sheraton-Biltmore Hotel and the Rhode Island Hospital, Providence, R. I., Oct. 23-24. The scientific program includes 12 papers and three panel discussions under the title, "The Care and Preservation of Key Personnel." Dr. Chester S. Keefer, Boston, president-elect of the college, will moderate a panel and will present "Executive Health—An Important National Asset," followed by the following papers:

Digestive Tract Disorder, Dr. Chester M. Jones, Boston.

The Prevention of Disability from Cardiovascular Disease, Dr. C. Sidney Burwell, Boston.

The Nutritional Problems of American Adults, Jean Mayer, Ph.D., Boston.

Speakers at the banquet Oct. 23, 7:30 p. m., will be Dr. Keefer, Mr. Edward R. Loveland, Executive Secretary of the college, and Dr. Edward C. Rosenow Jr., Philadelphia. A radiologic quiz session will be conducted by Dr. Thomas Forsythe, Providence. Dr. Marshall N. Fulton, Governor for Rhode Island, is general chairman of the meeting.

Annual Meeting on School Health.—The 33rd annual meeting of the American School Health Association will be held Oct. 17-23 with headquarters at the Claridge Hotel, Atlantic City, N. J., in association with the American Public Health Association. A panel discussion including members of the National Association for Mental Health is planned for the afternoon of Oct. 18. Under the topic Mental Hygiene in the Classroom, the keynote speaker at the general session, with Delbert Oberteuffer, Ph.D., president of the association, presiding, will be Dr. C. Morley Sellery, Los Angeles, presenting, "Evaluation of Health Education and Health Services, Los Angeles City School Study." The afternoon of Oct. 21 the following papers will be presented under the topic "Evaluation of Processes of School Health Services and Health Education:"

How We Did It in Los Angeles, Dr. Sellery.

Experiences of New York State Four Year Research Study, Dr. Ruth A. Lawrence, Rochester, N. Y.

How the Educators Evaluate School Health Programs, John B. Geissinger, Ph.D.

The speaker at the annual banquet Oct. 21, 7 p. m., will be Rear Admiral Bartholomew W. Hogan, surgeon general of the Navy. Presentation of the William A. Howe Award at the banquet will be made to Dr. Guy N. Magness, University City, Mo.

Obstetricians and Gynecologists Meet in Omaha.—District VI of the American College of Obstetricians and Gynecologists will hold its annual meeting in the Sheraton-Fontanelle Hotel, Omaha, Oct. 16-17. Participating jointly in the meeting will be the obstetrical and gynecological societies of Illinois, Iowa, Minnesota, Nebraska, North Dakota, South Dakota, and Wisconsin. The scientific program will include the following papers:

- The Ovary in Pregnancy, Dr. Wallace W. Nelson, Grand Forks, N. D.
- Fetal Salvage in RH Sensitized Women, Clifford P. Goplerud, Iowa City.
- Use of Trilene in Obstetrics, Dr. Samuel T. Thierstein, Lincoln, Neb.
- Cirrhosis of the Liver and Pregnancy, Dr. Richard M. Moore, Des Moines.
- Urinary Stress Incontinence in the Female, Dr. Burton R. Bancroft, Kearney, Neb.
- Procedures to Combat the Incompetent Cervix—A Critical Evaluation, Drs. Frederick J. Stoddard, Frederick J. Hofmeister, and William P. Wendt, Milwaukee.

Dr. Harry E. Harvey, of Lincoln, will be moderator of a panel, "Urological Complications in Gynecologic Surgery." The program also will include round tables on perinatal mortality, maternal mortality, endocrine problems, abnormal uterine bleeding, geriatric gynecology, and obstetric analgesia. The annual dinner dance will be held on Friday evening, Oct. 16. For information, write to Mr. Donald F. Richardson, Executive Secretary, ACOG, Box 749, Chicago 90.

EXAMINATIONS AND LICENSURE

MEDICAL SPECIALTY BOARDS

American Board of Anesthesiology: *Written.* Various locations, July 8. Final date for filing application is January 8. *Oral.* Miami Beach, April 25-29. [illegible] ready on file. Sec., Dr. Forrest E. [illegible] ington Ave., Hartford 5, Conn.

American Board of Dermatology: *Oral.* Oklahoma City, Jan. 15-18, 1960. The final date for filing all applications was July 1, 1959. Sec., Dr. Beatrice M. Kesten, One Haven Ave., New York 32.

American Board of Internal Medicine: *1959 Schedule—Written,* Oct. 19. Final date for filing application was May 1. *Oral.* For candidates on the East Coast, Nov. 6-7, 9-10. Final date for filing application was March 1. *Oral.* Philadelphia, March 11-12. Final date for filing application is January 15. Sec.-Treas., Dr. William A. Werrell, One West Main St., Madison 3, Wis.

American Board of Neurological Surgery: Examination given twice annually, in the spring and fall. In order to be eligible a candidate must have his application filed at least six months before the examination time. New Haven, Nov. 14-16. Sec., Dr. Donald D. Matson, 300 Longwood Ave., Boston, Mass.

American Board of Obstetrics and Gynecology: *Part I, Written.* Chicago, January 16. Candidates notified of their eligibility to participate in the Part I examination must submit their case abstracts within thirty days of notification of eligibility. *Part II, Oral.* Chicago, April 11-16. Final date for filing application was August 1. Sec., Dr. Robert L. Faulkner, 2105 Adelbert Road, Cleveland 6.

American Board of Ophthalmology: *Written.* January 1960 in various cities. Applications for the 1960 written examination must be filed before July 1. *Oral.* 1960, San Francisco, May; Chicago, October. Sec., Dr. Merrill J. King, Box 236, Cape Cottage Branch, Portland, Maine.

American Board of Orthopaedic Surgery: *Part II.* Chicago. Jan. 19-21, 1960. The deadline for the receipt of application was Aug. 15. Sec., Dr. Sam W. Banks, 116 South Michigan Ave., Chicago 3.

American Board of Pathology: New Orleans, Nov. 12-14. Final date for filing application was October 1. Sec., Dr. Edward B. Smith, Indiana University Medical Center, 1100 W. Michigan St., Indianapolis 7.

American Board of Pathology: *Examination in Forensic Pathology.* New Orleans, Nov. 13. Final date for filing application is October 1. Sec., Dr. Edward B. Smith, Indiana University Medical Center, 1100 W. Michigan St., Indianapolis 7.

American Board of Pediatrics: *Oral.* Washington, Dec. 4-6. *Written.* Jan. 8. Final date for filing application for the written examination is Dec. 1. Exec. Sec., Dr. John McK. Mitchell, 6 Cushman Road, Rosemont, Pa.

American Board of Physical Medicine and Rehabilitation: *Oral and Written.* New York, June 17-18. Sec., Dr. Earl C. Elkins, Mayo Clinic, Rochester, Minn.

American Board of Plastic Surgery: *Oral and Written.* Miami, Fla., Oct. 15-17. Final date for submitting case reports was July 1. *Oral and Written.* Milwaukee, May 1960. Final date for filing application is January 1. Corresponding Secretary, Mrs. Estelle E. Hillerich, 4647 Pershing Ave., St. Louis 8, Mo.

American Board of Psychiatry and Neurology: Chicago, Oct. 19-20; New York, Dec. 14-15; San Francisco, Mar. 14-15, 1960. Training credit for full time psychiatric and/or neurologic assignment in unapproved military programs or services between the dates of Jan. 1, 1950 and Jan. 1, 1954 was terminated on Jan. 1, 1959. Sec., Dr. David A. Boyd, 102-110 Second Ave. S. W., Rochester, Minn.

American Board of Radiology: *Examination.* Washington, Dec. 6-9. Deadline for filing application was July 1. Candidates examined in Diagnostic Roentgenology may expect to be examined in Physics. Obligatory examination in Nuclear Medicine has been postponed until after June 30, 1962 for those candidates being examined in Radiology or Therapeutic Radiology. Until that time the examination in Nuclear Medicine will be optional for those who wish to be examined in Radiology or Therapeutic Radiology. *Examination.* Cincinnati, Spring 1960. Deadline for filing applications is Jan. 1. A special examination in Nuclear Medicine (for those diplomates in Radiology or Therapeutic Radiology) will be offered provided there are sufficient applications. Sec., Dr. H. Dabney Kerr, Kahler Hotel Bldg., Rochester, Minn.

American Board of Surgery: *Written* examinations (Part I) will be held on December 2, 1959 at various centers to be announced later. Closing date for filing applications was August 1. Those completing training requirements after September 30 cannot be considered for the Part I examination in December of the same year. *Oral examinations (Part II):* Baltimore, Oct. 19-20; Cincinnati, Nov. 9-10; Boston, Dec. 14-15; Winston-Salem, No. Car., Jan. 18-19; New York, N. Y., Feb. 15-16; New Orleans, Mar. 14-15; Kansas City, Kans., May 16-17, and Los Angeles, May 19-20. Sec., Dr. John B. Flick, 1617 Pennsylvania Blvd., Philadelphia 3.

American Board of Urology: *Written.* Approximately 25 cities throughout the country, December 4, 1959. *Oral-Clinical* and *Examination in Pathology.* Chicago, February 1960. Final date for filing application was Sept. 1, 1959. Sec., Dr. William Niles Wishard, 30 Westwood Rd., Minneapolis 26, Minn.

DEATHS

Adams, Montague Sebert Ⓜ Anniston, Ala.; Tulane University School of Medicine, New Orleans, 1938; interned at Employees' Hospital of the Tennessee Coal, Iron and Railroad Company, Fairfield; associated with the Anniston Memorial Hospital; died July 26, aged 48.

Allen, Robert L. Ⓜ Rockland, Maine; Johns Hopkins University School of Medicine, Baltimore, 1941; interned at the Johns Hopkins University Hospital in Baltimore, where he served a residency; interned at the Massachusetts General Hospital in Boston; served a residency at the Union Memorial Hospital in Baltimore; specialist certified by the American Board of Surgery; fellow of the American College of Surgeons; consultant, Waldo County General Hospital in Belfast; on the staffs of Camden Community Hospital in Camden and the Knox County General Hospital; died July 31, aged 43.

Baker, Harold Frederick Ⓜ Muncy, Pa.; University of Pennsylvania School of Medicine, Philadelphia, 1917; veteran of World War I; during World War II served at the Army Medical Center in Washington, D. C.; honorary member of the medical staff of the Muncy Valley Hospital; director of the Muncy Banking Company; served as councilman; died July 23, aged 69.

Baldridge, John Henry, Batavia, Iowa; Keokuk (Iowa) Medical College, College of Physicians and Surgeons, 1904; veteran of World War I; died in Agency July 18, aged 80.

Brent, Meade Stith Ⓜ Heathsville, Va.; Medical College of Virginia, Richmond, 1908; specialist certified by the American Board of Psychiatry and Neurology, Inc.; member of the American Psychiatric Association; formerly superintendent of the Central State Hospital in Petersburg; served on the governor's advisory board on mental hygiene; died in the Medical College Hospital in Richmond, July 20, aged 77.

Brown, Harry Guy Ⓜ Cincinnati; Eclectic Medical College, Cincinnati, 1921; veteran of World War II; died in the Bethesda Hospital July 20, aged 64.

Burgett, Charles E., Dayton, Ohio; Kentucky School of Medicine, Louisville, 1898; associated with the Good Samaritan Hospital, where he died July 24, aged 93.

Carrozza, Natale Salvatore, Brooklyn; Dalhousie University Faculty of Medicine, Halifax, N. S., Canada, 1932; veteran of World War II; associated with the Long Island College Hospital, Brooklyn Eye and Ear Hospital, and Harlem Eye and Ear Hospital; died in the Veterans Administration Hospital July 19, aged 56.

Nesselrode, Clifford Calvin Ⓜ Kansas City, Kan.; born in Wellington, Kan., Feb. 25, 1880; University of Kansas School of Medicine, Kansas City, 1906; for many years professor of clinical surgery at his alma mater, where he joined the faculty in 1908; member of the founders group of the American Board of Surgery; received a medal and citation for cancer control work from the American Cancer Society, of which he was a director, past-president and past-vice-president, and past-president of the Kansas division; from 1909 to 1912 secretary of the Wyandotte County Medical Society and president in 1916; past-president of the Kansas City Academy of Medicine, Kansas City Southwestern Clinical Society, Kansas Medical Society, and Kansas City Surgical Society; member of the Western Surgical Association and the American Association for the Surgery of Trauma; fellow and from 1940 to 1950 governor of the American College of Surgeons; veteran of World War I; a member of the Officers Reserve Corps from 1919 to 1953; during World War II an examiner for draft board number five; trustee of the Boylan Fund; past-president of the Chamber of Commerce, which he helped establish; director of the Commercial National Bank and the Kansas Trust Company; in 1920 a director of the Citizens State Savings Bank; past-president of the Medical Alumni Association of the University of Kansas; associated with the Bethany and Providence hospitals and St. Margaret's Hospital, where he died July 18, aged 79.

Poage, Lydia Lloyd, Toledo, Ohio; Laura Memorial Woman's Medical College, Cincinnati, 1902; formerly associated with the Dayton (Ohio) State Hospital; member of the American Psychiatric Association; died July 19, aged 87.

Robinson, Donald Edward Ⓜ Burlington, N. C.; Harvard Medical School, Boston, 1927; certified by the National Board of Medical Examiners; specialist certified by the American Board of Pediatrics; served on the staff of the Alamance County Hospital; died in the Grace Hospital, New Haven, Conn., July 19, aged 57.

Rosenblum, David Hyman Ⓜ Beverly Hills, Calif.; University of Illinois College of Medicine, Chicago, 1925; specialist certified by the American Board of Surgery; fellow of the American College of Surgeons; on the staffs of St. John's Hospital in Santa

---

Ⓜ Indicates Member of the American Medical Association.

Monica and Mount Sinai Hospital in Los Angeles; associated with Cedars of Lebanon Hospital in Los Angeles, where he died July 22, aged 61.

Sandberg, Ivan Magnus Ⓜ Princeton, Ill.; University of Illinois College of Medicine, Chicago, 1932; interned at the Grant Hospital in Chicago; veteran of World War II; associated with the St. Margaret's Hospital in Spring Valley and Perry Memorial Hospital; county coroner; died June 26, aged 55.

Schiff, George Nathaniel Ⓜ Captain, U. S. Navy, retired, Waukegan, Ill.; Northwestern University Medical School, Chicago, 1925; served internships at Philadelphia General Hospital and Roseland Community and Michael Reese hospitals in Chicago; commissioned in the regular Navy in 1942 and retired March 31, 1959; veteran of World War II; died in the U. S. Naval Hospital in Great Lakes, Ill., Aug. 3, aged 59.

Smith, Marvin Henry Ⓜ Miami, Fla.; Atlanta School of Medicine, 1910; also a graduate in pharmacy; member of the American College of Gastroenterology; founder and past-president of the Southern Gastroenterological Association; died July 23, aged 80.

Steindler, Arthur Ⓜ Iowa City, Iowa; born in Vienna, Austria, June 22, 1878; Medizinische Fakultät der Universität, Vienna, Austria, 1902; in 1913 joined the faculty of the State University of Iowa College of Medicine, where he was a distinguished service professor, and for many years professor and head of the department of orthopedic surgery; on May 27, 1941, special exercises were held to mark the presentation to the university of the portrait of him, a gift of former students and staff members; at one time professor of orthopedic surgery at the Drake University College of Medicine in Des Moines; delivered twenty lectures in Spanish on orthopedic subjects and held several clinics in Mexico City, under the auspices of the National University of Mexico, where he was professor extraordinary; on Sept. 9, 1935, delivered the third annual William Benham Snow lecture at the meeting of the American Congress of Physical Therapy; specialist certified by the American Board of Orthopaedic Surgery; member and past-president of the American Orthopaedic Association; member of the Clinical Orthopaedic Society, American Academy of Orthopaedic Surgeons, American Society for Surgery of the Hand, and Sigma Xi; fellow of the American College of Surgeons and the International College of Surgeons, of which he was a regent and vice-president; held honorary memberships in various professional societies of Europe and Latin America; honorary fellow of the Royal College of Surgeons of England; chief of orthopedic surgery at the Mercy Hospital; died July 21, aged 81.

Traynham, Benjamin Lanier, Sweetsprings, W. Va.; University College of Medicine, Richmond, 1903; veteran of World War I; died July 14, aged 82.

Upton, William Henry, Asbury Park, N. J.; University of the City of New York Medical Department, 1893; died July 14, aged 90.

Walsh, John Joseph Ⓜ Chicago; Loyola University School of Medicine, Chicago, 1933; veteran of World War II; associated with the Presbyterian-St. Luke's Hospital; specialist certified by the American Board of Otolaryngology; died July 29, aged 51.

Watson, Tolbert Ⓜ Sunnyvale, Calif.; University of Minnesota College of Medicine and Surgery, Minneapolis, 1908; a director of the Sunnyvale Branch of the Bank of America; for 14 years a member of the Sunnyvale Elementary School District board of trustees; a charter member and past-president of the Sunnyvale Rotary Club; died July 30, aged 79.

Welch, Thomas Lee Ⓜ Port Arthur, Texas; Flint Medical College of New Orleans University, New Orleans, 1907; died in St. Mary's Hospital July 14, aged 76.

Weller, Joseph Newton, Fort Lauderdale, Fla.; Jefferson Medical College of Philadelphia, 1901; past-president of the Summit County (Ohio) Medical Society; for many years practiced in Akron, Ohio, where he was on the staff of the City Hospital; died July 11, aged 81.

Wells, Samuel Robert Ⓜ Hagerstown, Md.; University of Maryland School of Medicine and College of Physicians and Surgeons, Baltimore, 1928; member of the American Academy of General Practice; past-president of the Washington County Medical Society; appointed first deputy county medical examiner for Washington County in 1936 and served as coroner continuously since; associated with the Washington County Hospital, where he died July 21, aged 54.

White, Milton Noble Ⓜ Philadelphia; Howard University College of Medicine, Washington, D. C., 1898; died June 26, aged 87.

Wilkinson, Albert Livingston Ⓜ Baltimore; University of Maryland School of Medicine, Baltimore, 1903; associated with St. Joseph's Hospital; died July 28, aged 80.

Woods, Wilfrid P. Ⓜ Longmont, Colo.; Ensworth Medical College, St. Joseph, Mo., 1906; associated with Longmont Hospital; died July 13, aged 77.

Wright, Thurman Gregory, Spartanburg, S. C.; Vanderbilt University School of Medicine, Nashville, Tenn., 1916; associated with Mary Black Hospital; died July 14, aged 68.

INDIA

Triamcinolone.—V. R. Shah and co-workers (*Journal of Postgraduate Medicine,* vol. 5, April, 1959) studied the action of triamcinolone in 23 patients (7 with rheumatoid arthritis, 5 with status asthmaticus, 3 with emphysema and cor pulmonale, 3 with tuberculous meningitis, 2 with viral encephalitis, 2 with acute nephritis, and 1 with nephrosis) to determine its effects on sodium and water retention, and the nature and extent of any side-effects produced. The dosage, given orally, varied with the condition and individual response but the usual initial dose was 12 to 16 mg. per day in three or four divided doses. This was reduced gradually by 2 mg. every third day till a maintenance dose was reached. The duration of therapy ranged from 1 to 14 weeks.

The therapy with triamcinolone had to be discontinued in one of the seven patients with rheumatoid arthritis because of puffiness of the face, weight gain, and epigastric pain. Complete remission was obtained in three of these patients, marked improvement in one, and slight improvement in two. Those in stage 1 and 2 showed a good response while those in stage 4 showed only slight improvement. In most of these patients joint pain and swelling diminished within four days of treatment. None of them showed any retention of sodium and water except the one whose treatment had to be stopped. This patient had an associated emphysema. In the five patients with status asthmaticus the symptoms could not be controlled by the usual therapy but all showed a good response with triamcinolone. Such minor side-effects as generalized aching, burning in the throat, weakness, and anorexia were frequent. None showed any change in serum sodium and potassium levels, body weight, or blood pressure.

The response in the three patients with emphysema and cor pulmonale was poor. The three with tuberculous meningitis received this drug in addition to specific therapy. Clinical improvement was evident within four days of therapy and the cerebrospinal fluid became normal within two to three weeks. There were no side-effects. The two patients with viral encephalitis showed dramatic improvement. The response was good with complete recovery in both patients with acute nephritis but the drug failed to produce diuresis in the patient with nephrosis. No side-effects were observed.

Hemoglobin A2.—J. B. Chatterjee and co-workers (*Bulletin of Calcutta School of Tropical Medicine,* vol. 7, Jan., 1959) stated that the normal adult hemoglobin or hemoglobin A is now known to consist of different components described as Hb.A1, Hb.A2, Hb.A3, and Hb.A4. The A2 component is increased in thalassemia trait and a raised Hb.A2 is now used as a diagnostic test for this condition. The authors studied this component by paper electrophoresis of blood samples from 20 normal subjects, 63 patients with heterozygous thalassemia, 16 with homozygous thalassemia, and 70 with heterozygous Hm.E. Compared to normal controls, the Hb.A2 was markedly raised in those with heterozygous thalassemia. It was less markedly raised in many of those with homozygous thalassemia. The suppression of Hb.A in homozygous thalassemia was found to be due mostly to suppression of Hb.A1. The relative increase of Hb.A2 may be an expression of the thalassemia gene.

SWEDEN

Hydrochlorothiazide.—A. Lundberg and co-workers (*Opusc. med.* 4:129-136, 1959) gave the new, hydrogenated chlorothiazide derivative, hydrochlorothiazide, to 18 patients. Eleven patients had cardiac edema, one had ascites, one had atrial fibrillation without edema, and five suffered from essential hypertension. The diuretic action appeared to be comparable to that of chlorothiazide and was achieved by smaller doses. The authors concluded that chloride was probably lost in excess of sodium with the new substance, which would imply a greater risk of alkalosis than with chlorothiazide.

Operability of Lung Cancer.—While surgery is as yet the only treatment offering any chance of recovery from lung cancer, more than half of all pulmonary carcinomas are inoperable by the time they are diagnosed. Operation is usually contraindicated by massive remote metastasis or by massive infiltration of the mediastinum. Lawe Svanberg and co-workers (*Acta chir. scandinav.* 117:8-17, 1959) appraised the value of bronchoscopic examination and analysis of lung function in 91 patients to determine the operability of bronchial cancer. Examination included bronchoscopy and spirometry in all patients and bronchospirometry in 76. In the remaining 15 patients spirometry was usually supplemented by angiopneumography. Bronchography was also done in most patients but, as far as operability was concerned, it yielded no more informa-

---

The items in these letters are contributed by regular correspondents in the various foreign countries.

tion than was obtained by bronchoscopy. The frequency of cancer was slightly higher in the right lung than in the left. The upper, lower, and middle lobes were involved with roughly equal frequency; 40 patients underwent lung resection (20 had a lobectomy and 20 had a pneumonectomy). Explorative thoracotomy was performed on 33.

For various reasons 18 patients were not operated on; 10 were in too poor a general condition, 4 had metastasis in the supraclavicular lymph nodes, in 2 the vena cava superior was obstructed, and 2 had paresis of the laryngeal recurrent nerve. Results showed that any change in the shape or motility of the carina was a serious sign frequently suggestive of inoperability as found on bronchoscopic examination. In 2 of 16 patients, however, radical operation could be performed. Pronounced rigidity of the main bronchus also contraindicated operation. On the other hand, endobronchial invasion of the proximal segment of a main bronchus did not necessarily mean that the case was inoperable. Spirometric examination yielded valuable information on lung function and thereby in the evaluation of the operability of cancer. In these patients lung function was often impaired not only by the carcinoma but also by emphysema and chronic bronchitis.

Bronchospirometry yielded important information not only on the functional state of the "healthy" lung but also on that of the affected lung. Determination of the decrease in the oxygen uptake of the lung due to the cancer gave valuable information on the prospects of operation. When more than 40% of lung function had been lost radical operation was possible in only 2 (8%) of 25 patients as against 23 (79%) of 29 when the loss was less than 20%. Even if bronchoscopy and bronchospirometry strongly suggested that a given lesion was inoperable, this fact did not contraindicate thoracotomy, because this operation is attended by hardly any risk. The information obtained by bronchoscopy and spirometry-bronchospirometry is prognostically valuable and provides important guides for the surgeon in evaluating operability.

UNITED KINGDOM

Electronic Thermometer.—A new type of electronic thermometer which will measure temperature as soon as it is placed in contact with an object has been developed in England. Results achieved so far suggest an important advance in clinical medicine—the virtually instantaneous measurements of the temperature of the human body within a second or so of its initial application to the skin or mucosa. The device depends on the use of a temperature-sensitive metallic oxide lead which is connected to a sensitive direct current bridge-measuring circuit. The complete unit weighs 4 lb. and measures 8½ by 6 by 4½ in. One of its advantages is that the temperature probe can be operated at a distance of up to 1,000 ft. from the recording device.

British Medical Association Council on Advertising and Publicity.—The British Medical Association adopted a recommendation of the Central Ethical Committee on advertising. The Council on Advertising and Publicity has noted with concern the increasing frequency with which doctors' names receive public mention in the press, radio, and television and concluded that some doctors voluntarily seek undue publicity. The council considered that it is natural that senior and eminent members of the profession are more likely to be exposed to such publicity, and it appealed to them to uphold the traditions of the profession and to conform to its ethical standards. A comprehensive statement on indirect methods of advertising draws attention to the need for vigilance in such matters. This was circulated to all doctors in the United Kingdom. The BMA warned doctors to avoid discussions in the lay press on controversial points of medical science and treatment and to exercise caution when stating their views to the lay press or when giving statements to it. While it did not object to doctors writing signed items for the lay press, the association deprecated frequent contributions of this type, which could, under some conditions, be used for self-advertisement. Books, articles, and lectures for the lay public must be written with care as they may lead to the charge of self-advertising.

Advice was also given on press interviews, which might be misreported and put the doctor in a position of embarrassment. The publication of photographs was regarded as a most undesirable form of publicity, and doctors were asked to ensure that their photographs would not be published in the lay press. The use of the latter for the direct advertising of the professional activities of an individual doctor was expressly forbidden.

The association did not object to television and radio appearances by doctors, provided they remained anonymous and observed the appropriate ethical safeguards. It considered that great caution is necessary in public discussions on theories and treatment of disease, because of the misinterpretation that might be put on these by an uninformed public. The BMA suggested that there should be a close link between itself and the BBC to control the broadcasting and televising of medical subjects. It considered it to be highly unethical for a doctor to participate in sound or television programs which are presented for, or on behalf of, firms using sponsored radio or television as a means of advertising. The BMA believed that advertising by the profession in general would destroy those traditions of dignity and self-respect which have helped to give the British medical profession its high status.

CORRESPONDENCE

PERIODIC DISEASE

To the Editor:—An editorial in The Journal, June 6, page 678, calls attention to the preponderance of one form of periodic disease, namely, periodic peritonitis, among Jews, Arabs, and Armenians, and to some cases among Turks and Italians. It should be emphasized that the disorder also occurs in other Aryans and in Japanese and Negroes. The two new names recently proposed for it do not help to clarify the problem. "Familial Mediterranean fever" (Heller and others: *A. M. A. Arch. Int. Med.* 102:50 [July] 1958) is too ethnically or geographically restrictive, and abdominalgia, not fever, is the outstanding complaint. "Familial recurring polyserositis" (Priest and Nixon: Program, American College of Physicians, April 20-24, 1959, p. 67) implies multiple serous membrane involvement which is not always present. Furthermore, the disorder is not always familial but may affect only one member, without evidence of heredity.

The only important etiological clues or additions to knowledge to date are the suggested causative relation of etiocholanolone (Bondy and others: *Yale J. Biol. & Med.* 30:395 [June] 1958), the possible therapeutic value of fluorometholone (Smith, L. G.: Personal communication to the author), and the occasional occurrence of nephropathy and amyloidosis. The ultimate cause and the reason for the regular or irregular recurrent episodes with intervals of good health are as much of a mystery as ever.

Nephropathy, fatal in some patients with long-standing periodic peritonitis (Mamou and Cattan: *Semaine hôp. Paris* 28:1062 [April] 1952) has given rise to confusion as to its cause and whether it is a part, a complication, or a sequela of the disorder. A partial solution to that problem was the discovery of amyloidosis in a few instances studied post mortem (Heller and others: *A. M. A. Arch. Int. Med.* 102:50 [July] 1958; Tuqan: *Ann. Int. Med.* 49:885 [Oct.] 1958; Alkalay and others: *J. A. M. A.* 170:653 [June 6] 1959), and this has led to a dubious suggestion of including the disorder in the group of collagen diseases. Actually, the occurrence of amyloidosis seems reasonably easy to explain. Periodic peritonitis is characterized by years of recurrent bouts of fever and hyperglobulinemia. Persistent hyperglobulinemia, as in chronic infection or suppuration and during experimental oft-repeated parenteral injection of foreign protein, is an important factor in the cause of amyloidosis (Eklund and Reimann: *Arch. Path.* 21:1 [Jan.] 1936, cited in editorial *J. A. M. A.* 106:1200 [April 4] 1936).

INJECTIONS INTO THE BACK

To the Editor:—In The Journal, Aug. 8, page 1768, Schneider and associates reported a tragic case in which material injected into the back in an effort to relieve low back pain had entered the spinal canal and resulted in serious involvement of the nervous system and death. It may be thought that this is a unique occurrence, and for that reason I should like to call attention to the fact that other instances of this kind have occurred.

In 1957 we were consulted by a 53-year-old woman who had suffered from pain in her back for four years. In May of that year an injection had been made into her back. Immediately after the last of these injections she experienced severe pain across the lower part of her back that radiated to both legs. Her entire body below the level of the umbilicus became numb. Her legs became weak, and she was unable to urinate. There was temporary improvement in the next week, and then there was steady progression to a complete spastic paraplegia. We operated on this patient on Oct. 7, 1957, and found an intense proliferative archnoiditis with cyst formation in the subarachnoid space and compression and constriction of the spinal cord. Removal of the thickened arachnoid membrane provided only temporary relief, and this woman continues to suffer from a complete spastic paraplegia with severe spasmodic flexor contractions.

This is another instance of the potential dangers of injecting material into the back, particularly if there is any possibility of its entering the spinal subarachnoid space, as obviously occurred in this instance.

MEDICAL LITERATURE ABSTRACTS

NEUROLOGY & PSYCHIATRY

Cerebral Necrosis as a Consequence of Radiotherapy for Tinea Capitis. A. Ravina, M. Pestel and J. Lapresle. Presse méd. 67:1063-1064 (May 27) 1959 (In French) [Paris].

The authors report the occurrence of severe cerebral necrosis in a 6-year-old boy after roentgen irradiation of the scalp for tinea capitis. The child was subjected to one session of radiation treatment, consisting of 350 r to each of 4 fields irradiated (5 minutes each) with a voltage of 110 kv. at an intensity of 12 ma. and a focal distance of 22 cm. An early fall of the hair was succeeded by suppuration lasting for several months, and when it subsided, the scalp was thin and hairless. Five months later the child had spasmodic contractions, first of the upper, then of the lower extremities. Three months later convulsive crises appeared with a bilateral Babinski sign.

When admitted to the hospital, the patient presented severe motor deficiency on the right side, a basic hypotonia; he was unable to stand or walk, and, when sitting, he could not keep his head erect. There was apparently no subjective or objective disorder, but it was difficult to examine him because his psychomotor development was disturbed. His condition rapidly worsened. A phase of general excitement, followed by crises of Bravais-Jacksonian epilepsy, appeared. All this began in the left arm and extended to the face and the lower left extremity, after which the patient displayed marked confusion. Later, crises of clonic spasms of the face, associated with paroxysmal nystagmus, set in and lasted for one hour. After an improvement lasting for a few days, the temperature rose to 39 C (102.2 F) and then to 40.5 C (105 F), and the patient died suddenly during a convulsive crisis 13 months after the roentgen-ray treatment.

The only lesions found at autopsy were those in the brain, i. e., necrosis of the white substance associated with important vascular lesions. These findings are usually found after exposure of the cerebral parenchyma to roentgen irradiation. This accident was evidently caused by an error in the radiation dosage, accompanied by imperfections in technique and equipment. It provides one more proof of the care needed in using x-rays for scalp treatment.

Deaths Associated with Electroplexy. J. C. Barker and A. A. Baker. J. Ment. Sc. 105:339-348 (April) 1959 [London].

A recent court case revealed that in 1957, nearly 20 years after electric convulsive therapy (E. C. T.) had first been used for the treatment of mental disorder, no uniform technique had yet been evolved. The medical witnesses were unable to agree on the use of muscle relaxants or mechanical restraint, but were agreed that there were certain risks attendant upon the use of electroplexy, especially the risk of fractures and the risk to life. It was argued that, had the plaintiff received a relaxant drug, he might not have sustained bilateral acetabular fractures, but might have suffered an even worse disaster, namely, death. This controversy induced the authors to inquire into the death rate associated with electroplexy, and to examine the causes of death, noting especially any possible relationship between death and particular E. C. T. techniques. Two questionnaires were sent to 13 teaching hospitals in London and to 42 mental hospitals. Replies to questionnaire 1 showed that no uniform E. C. T. technique was practiced in Britain. Replies to questionnaire 2 revealed, among other facts, that the total number of treatments carried out during the 2-year period at 42 hospitals replying to item 1 of the circular was approximately 259,000. The number of deaths associated with E. C. T., from all the replies received during this period, was 9 (occurring within 3 days). Therefore, the incidence of death due to E. C. T. was approximately one death in 28,000 treatments, giving a treatment fatality rate of 0.0036%.

The occasional death following E. C. T. necessitates a careful physical examination, with special reference to the cardiovascular system, for all patients, especially those in middle and later life. The day-to-day physical health of these patients should be carefully checked between treatments. Great care should be shown with patients in whom technical difficulties have been encountered during previous treatments, and attention should be directed to changing techniques, generally in the direction

The place of publication of the periodicals appears in brackets preceding each abstract.

Periodicals on file in the Library of the American Medical Association may be borrowed by members of the Association or its student organization and by individuals in continental United States or Canada who subscribe to its scientific periodicals. Requests for periodicals should be addressed "Library, American Medical Association." Periodical files cover 1950 to date only, and no photoduplication services are available. No charge is made to members, but the fee for others is 15 cents in stamps for each item. Only three periodicals may be borrowed at one time, and they must not be kept longer than five days. Periodicals published by the American Medical Association are not available for lending but can be supplied on purchase order. Reprints as a rule are the property of authors and can be obtained for permanent possession only from them.

of modified to unmodified E. C. T. Additional medication should be reduced to the barest minimum. Electrical modification of the convulsion may be safer than chemical modification in these patients. Nevertheless, there is no evidence to show that any particular E. C. T. technique carries less risk to life than others.

Neuromyopathy from Cancer: Case Combined with Atrophy of the Hypophysis from Other Cause. J. H. Vogt. Tidsskr. norske lægefor. 79:605-608 (May 15) 1959 (In Norwegian) [Oslo].

A case of coincident hypopituitarism and peripheral neuromypathy from cancer (neuromyopathia e cancere) in a woman, born in 1898, is described. In 1937 she had a grave purulent peritonitis followed by prolonged shock. From December, 1956, on there were gradually increasing symptoms of neuromyopathy; the patient felt weak, was often nauseated, and had a feeling that her knees would give way. She had a tendency to sideropenic anemia, and there were symptoms of the Plummer-Vinson syndrome. After iron medication she was less listless but largely incapacitated because of general symptoms, failing memory, and weakness in the proximal muscles of the lower extremities. In 1957 laboratory examinations established a definite hypophysial hypothyreosis and a slight hypophysial insufficiency of the adrenal cortex. Response to adequate endocrinologic therapy was poor. The neuromyopathy became aggravated. In March, 1958, concurrent bronchial cancer was diagnosed. Both neuromyopathy and cancer regressed during roentgen-ray treatment, but accidental fracture of the femoral neck and pulmonary embolism caused death. Autopsy showed undifferentiated bronchial cancer with metastases to the mediastinal lymph nodes and a large embolus in the right pulmonary artery. The hypophysis was atrophic and infiltrated with connective tissue, the uterus was strongly atrophic, and the ovaries were hyalinized and atrophic.

Evaluation of Certain Drugs in Geriatric Patients: Effects of Chlorpromazine, Reserpine, Pentylenetetrazol U. S. P., and Placebo on Eighty-Four Female Geriatric Patients in a State Hospital. D. B. Robinson. A. M. A. Arch. Gen. Psychiat. 1:41-46 (July) 1959 [Chicago].

In an attempt to determine what advantages and disadvantages the so-called tranquilizing drugs have over older therapies, patients from the women's geriatrics unit of the Rochester (Minn.) State Hospital were selected for study on the basis of diagnosis and age (65 years or more) at the time of onset of illness. Clinical diagnostic categories included chronic brain syndrome associated with senile brain disease or with cerebral arteriosclerosis. Eighty-four patients completed at least one 6-week medication period. No statistically significant differences in beneficial effects were demonstrated when the changes induced by chlorpromazine, reserpine, or pentylenetetrazol were compared with the effects of a placebo. In isolated instances of drug therapy, improvement was observed to a degree not seen in the group of patients receiving a placebo. These isolated cases were fairly evenly distributed among the groups receiving the drugs under study. An initial improvement during the first 6 weeks of drug therapy observed in 8 patients was followed by a regression to control levels when drug therapy was continued for an additional 6 weeks. Therefore, initial favorable responses must be viewed with caution.

Patients with the least organic damage seemed to respond better than those with advanced deterioration to treatment with tranquilizers. A tendency to lower the level of functioning in many patients was observed with each of the medications, as compared with spontaneous deterioration observed in the group given a placebo. This tendency was statistically significant in the patients who received chlorpromazine, while the trend was not statistically significant for patients treated with reserpine or pentylenetetrazol. Undesirable side-effects were most prevalent in the patients who received chlorpromazine. In general, it may be concluded that the use of chlorpromazine, reserpine, and pentylenetetrazol will not effect any significant improvement in senile patients found in state hospitals.

GYNECOLOGY & OBSTETRICS

Mustard Chemotherapy in Ovarian Carcinoma. E. V. Coonrad and R. W. Rundles. Ann. Int. Med. 50:1449-1461 (June) 1959 [Lancaster, Pa.].

The authors report on 38 female patients, between the ages of 14 and 67 years, with carcinoma of the ovaries, who were treated with the alkylating agents, nitrogen mustard, triethylene melamine (TEM), triethylene thiophosphoramide (Thio-TEPA), and chlorambucil, at the Duke Hospital in Durham, N. C., during the last 6 years. The results of chemotherapy were excellent in 4 patients, good in 7, and fair in 6. Seventeen of the 38 patients thus showed favorable responses, lasting from 4 months to over 6 years. In 15 patients (40%) of the series, there was no evidence of antitumor effect of the drugs, and the response to chemotherapy could not be evaluated in the remaining 6 patients. For maximal and satisfactory suppression of the growth of carcinoma of the ovary with the mustard compounds, continuous and aggressive therapy was almost invariably necessary.

For sustained therapy the orally absorbed compounds, TEM and chlorambucil, have been most practical. The safe and effective dose of TEM varied considerably from patient to patient, and many have found it difficult to use. Chlorambucil was more uniform and predictable in dose, could be given without alkali, and produced singularly few side-reactions. It seemed to be as effective as TEM. The initial dose of chlorambucil was 10 to 12 mg. daily, and the average maintenance dose was 4 to 6 mg. daily, or as required to maintain a mild leukopenia indefinitely. If severe leukopenia or thrombocytopenia occurred, chemotherapy was suspended temporarily. Marrow function ordinarily improved within a few days when it was depressed by chlorambucil. In several patients, tumor growth recurred quickly when reduction or suspension of chemotherapy was made necessary by bone marrow depression. Patients who had previously been given intensive irradiation therapy tolerated less chemotherapy than others, and accordingly they were benefited less at a late stage in their disease. The response of ovarian tumors to the mustard chemotherapy showed no definite correlation with their pathological features. Three of the 4 patients who had excellent responses had well-differentiated papillary cystadenocarcinomas. In each of the other group of patients with good, fair, or no response, the pathological findings ranged from well-differentiated cystadenocarcinomas to undifferentiated carcinomas.

The degree of therapeutic success observed with the mustard compounds should encourage further investigation of the effect of different types of alkylating agents on a large scale in patients with ovarian carcinoma. The intravascular route of administration, the infiltration of alkylating agents into local areas of tissue involvement, and combinations of surgery and chemotherapy, possibly at "second look" procedures in those with occult disease, should all be considered. Progress can be facilitated also by designing more conclusive studies of the value of supervoltage irradiation, and by comparing the effects of intracavitary isotope therapy with chemotherapy.

Hyperthyroidism and Pregnancy. W. F. Becker and P. G. Sudduth. Ann. Surg. 149:867-874 (June) 1959 [Philadelphia].

There were 30 thyrotoxic women among 152,084 pregnant patients observed at the Charity Hospital of Louisiana, in New Orleans, during the 16-year period, 1943-1958. Twenty-seven patients were multiparas, and 3 were primiparas. Eighteen of the 30 patients experienced the onset of thyrotoxic symptoms during pregnancy—12 during the first trimester, 1 in the second trimester, and 5 in the third trimester. Symptoms antedated the pregnancy in 12 patients. Twenty patients had toxic diffuse goiter (5 of them recurrent), and 10 had toxic nodular goiter. The thyrotoxicosis was considered to be mild in 8 cases, moderate in 17, and severe in 5. Only 8 thyroidectomies were performed during pregnancy—5 during the first trimester and 3 during the second trimester. Preoperative control of the hyperthyroidism was accomplished with propylthiouracil and Lugol's solution in 7 cases, and iodine and sedation in 1. Thyroidectomy had no demonstrable adverse effect upon these 8 pregnancies, 7 of which resulted in normal infants. In one patient, who had been operated on during the first trimester, a severe toxemia of pregnancy developed during the third trimester, and a term stillbirth resulted.

Twenty of the 22 patients who were not operated on during pregnancy were managed by the use of antithyroid drugs alone, and 2 received only iodine and sedation. Six of the 22 patients had thyroidectomy relatively soon after delivery. Of the remaining 16, 4 are presently awaiting thyroidectomy, 5 refused operation and are being treated with propylthiouracil, 4 apparently had drug-induced remissions of their thyrotoxicosis, and 3 were lost to follow-up. In the group of 22 patients treated without operation, 3 abortions occurred prior to institution of therapy but after thyrotoxicosis had become manifest. While receiving propylthiouracil, 3 patients aborted and 2 had term stillbirths. Abnormalities observed in the 14 infants born alive to mothers whose hyperthyroidism had been treated by antithyroid drugs alone included a small goiter which subsided without treatment, a persistent goiter in a cretin, and a huge hyperplastic thyroid which produced tracheal compression and death a few minutes after birth. A total of 42 pregnancies occurred in 30 patients during thyrotoxicosis. Thirty-three living babies were produced; 32 survived, and 31 have developed normally.

At the Charity Hospital in New Orleans approximately one pregnancy in 5,000 is complicated by hyperthyroidism. This is a much lower incidence than the average figure of one in 500 recorded in the literature. Early recognition and prompt control of thyrotoxicosis will reduce whatever influence it may have on the incidence of such complications of pregnancy as abortion, stillbirth, premature delivery, and toxemia. Hyperthyroidism per se probably does not exert a deleterious effect upon the fetus. Administration of radioiodine (I^{131}) is contraindicated during pregnancy, because it crosses the placental barrier and may destroy the fetal thyroid. The thiourea derivatives also traverse the placenta and are capable of exerting harmful effects upon the fetal thyroid; and their long-term use should be avoided. Most pregnant patients with hyperthyroidism are best treated by subtotal thyroidectomy after rapid preparation with antithyroid drugs and/or iodine. Hypothyroidism is a threat to both mother and fetus, and its induction by excessive dosage of antithyroid drugs is to be avoided. It is important to anticipate and appropriately treat the transient hypothyroidism which often follows thyroidectomy.

Teratomatous Ovarian Chorioepithelioma in a 7-Year-Old Girl. P. Torres. Rev. gynec. e obst. 104: 385-406 (May) 1959 (In Portuguese) [Rio de Janeiro].

Chorioepithelioma is still considered a peculiar tumor because of its anatomicopathological characteristics and its rarity. The author reports a case of ovarian teratomatous chorioepithelioma in a 7-year-old girl who was admitted to the Charity Hospital of Juiz de Fora, state of Minas Gerais, Brazil. For the 3 months prior to admission, the patient had shown sudden acceleration of physical development, enlarged genitals, and enlarged, tender abdomen. In the lower abdominal portion there was a tumor-like mass; its size corresponded to a 5-month pregnancy. The girl's mother strongly denied the possibility of the patient's having had sexual intercourse. The diagnosis of chorioepithelioma was made with the aid of laboratory tests (including Mainini and Frank-Salmon reactions, urinary hormone determination, and exfoliative cytology), radiologic findings, and general physical examination. At surgical intervention a large tumor-like mass was found, involving the ovaries and the tubes and continuing onto the external uterine surface. There were smaller tumors in the parietal peritoneum and in the lower intestinal loops. The microscopic examination of the removed tumor confirmed the diagnosis of chorioepithelioma. The patient died 27 days after the operation of peritonitis, probably due to a tear in an intestinal loop.

Volvulus Associated with Pregnancy: A Review and a Report of 3 Cases. G. D. Malkasian, Jr., J. S. Welch and G. A. Hallenbeck. Am. J. Obst. & Gynec. 78:112-124 (July) 1959 [St. Louis].

The authors reviewed 43 cases of volvulus during pregnancy collected from the literature. Three cases are presented from the records of the Mayo Clinic and are described in detail. Among the 43 patients studied, volvulus occurred more often in primiparous than in multiparous patients. Many of the patients had a history of previous episodes of colicky abdominal pain, vomiting, and absence of passage of feces or flatus. The range of duration of the acute symptoms, from onset to operation or death, was from half a day to 14 days. The delay in definitive treatment has accounted for the exceedingly high mortality rate in the past. There were 12 maternal deaths and 14 fetal deaths in this series. A higher fetal and maternal mortality rate occurred among those patients in whom volvulus involved the small intestine. Among patients in whom volvulus occurred in the sigmoid colon, the fetal and the maternal mortality rates were somewhat lower than they were among those in whom volvulus occurred in segments of the colon other than the sigmoid. Two cases of volvulus of the cecum and the terminal portion of the ileum resulted in maternal and fetal death.

Six of the 43 patients died before treatment could be instituted; the remaining 37 patients were treated surgically. In 16 patients the treatment consisted of a simple untwisting of the twisted part, while the procedures used in the other 21 patients varied, but frequently involved decompression of the intestine. Active surgical treatment for volvulus during pregnancy is recommended, particularly in patients in whom signs of intestinal strangulation are present or in whom relief could not be achieved by conservative medical measures over a short period. Decompression of a sigmoid volvulus with a long rectal tube may be justified under certain circumstances, as has been demonstrated in one of the 3 cases described. This is the only recorded case in which volvulus in pregnancy was relieved by colonic intubation and without surgical intervention; however, subsequent definitive surgical treatment is usually necessary.

PEDIATRICS

Hereditary Enamel Dysplasia. A. P. Chaudhry, O. N. Johnson, D. F. Mitchell and others. J. Pediat. 54:776-785 (June) 1959 [St. Louis].

A brief review of the literature on hereditary enamel dysplasia and a detailed clinical and roentgenologic examination of the teeth in 10 members of 5 families with a known pedigree has led the authors to form the following conclusions: Enamel dysplasia is an hereditary disturbance which appears to be transmitted as a simple dominant Mendelian character without apparent sex-linkage. Similar cases which lacked an hereditary background were not included in this study; they were considered idiopathic in origin. Hereditary enamel dysplasia is primarily an ectodermal disturbance of the tooth germ, the mesodermal components being normal. Secondarily, the exposed dentine may become sclerotic. No case of complete enamel agenesis was found in this series. In some cases there was a small quantity of enamel which broke off soon after eruption of the teeth. There was a gradation in the degree of disturbance. The enamel in newly erupted teeth was white, dull, and chalky, but it soon became pigmented due to imbibition of exogenous pigments. Both dentitions were affected in all the patients of this series. Other abnormalities, namely, tooth resorption, missing teeth, localized delayed eruption, and anterior open bite, were noted in some cases but were not present consistently. From the point of view of treatment, the degree of involvement is of importance. In mild cases, crowning the teeth has been successful, while in severe cases, especially those with severe malocclusion, extraction of teeth and construction of dentures to improve esthetics and function have been indicated.

QUESTIONS AND ANSWERS

Rh FACTORS

To the Editor:—*The theory of triple inheritance of the Rh factors is presented by Race and Sanger in the 1958 edition of their book "Blood Groups in Man" (pp. 142-145). How does one fit into their scheme of triple inheritance the newly discovered factors* hr *(f),* rh$_1$ *(Ce),* hr^V, *and* Rh^A, Rh^B, *and* Rh^C?

Malcolm A. Hyman, M.D., Bayonne, N. J.

Answer.—The Race and Sanger book is confusing as regards the position of the blood factors hr (f), rh$_1$ (Ce), hr^V (V), and Rh^A, Rh^B, Rh^C, and Rh^D in the Fisher-Race scheme of triple inheritance. According to this book, additional linked genes have been invoked to account for factors hr (f) and hr^V (V). For example, type rh now becomes cdefv/cdefv instead of cde/cde. This disregards blood factor rh$_1$ (Ce) (Rosenfield and Haber: Rh Blood Factor, rh$_1$ (Ce), and Its Relationship to hr (ce), *Am. J. Human Genet.* 10:474 [Dec.] 1958), and Rosenfield's suggestion that factor hr might be the result of a position effect (ce) rather than an additional linked gene f. No attempt has been made to incorporate blood factors Rh^A, Rh^B, Rh^C, and Rh^D into the triple inheritance scheme, except to remark that certain D persons can produce anti-D.

The real problem is not one of genetics but of serology. The confusion has been caused by the lack of distinction between agglutinogens and their serologic attributes, the blood factors, and by use of the C-D-E notations. The C-D-E symbols assume a simple one-to-one correspondence between gene, agglutinogen, and antibody, but Landsteiner's work proves that every agglutinogen has multiple different specific antibodies, each with its corresponding blood factor. For example, gene R^1 determines the agglutinogen Rh$_1$ which has the serologic attributes Rh$_0$, Rh^A, Rh^B, Rh^C, Rh^D, rh$'$, rh$_1$, rh^G, and hr$''$, a total of nine blood factors at the present stage of knowledge, while gene r determines agglutinogen rh having the serologic attributes rh^G, hr$'$, hr$''$, and hr, a total of only four blood factors; therefore the concept of triple inheritance bears no relation at all to the laboratory observations (Wiener: Blood-Group Nomenclature, *Science* 128:849 [Oct. 10] 1958).

Other misconceptions are implied by the C-D-E notations. One is that there are only three Rh blood factors, C, D, and E, with three contrasting Hr factors, c, d, and e; another is that by testing for these six factors a patient's Rh-Hr genotype can be determined. The Committee on Medicolegal Problems of the American Medical Association has prepared a report which recommends that "unless and until some other convention can be agreed on, the original Rh-Hr notations be kept as the standard and sole nomenclature for preparing approved medicolegal reports on Rh-Hr types" (Wiener and others: Medicolegal Applications of Blood-Grouping Tests, *J. A. M. A.* 161:233-239 [May 19] 1956; 164:2036-2044 [Aug. 31] 1957). This report and the references should be consulted. Instead, this report has been repudiated by some workers (Allen and others: Blood-Group Nomenclature, Letters, *Science* 127:1255 [May 23] 1958) who intend to continue using the C-D-E notations.

In summary, the newly discovered Rh-Hr factors (named by the correspondent) cannot be fitted into the Fisher-Race hypothesis of triple inheritance because the hypothesis is fallacious.

SPECIAL OLEOMARGARINES

To the Editor:—*Please give information as to the best high-grade anticholesterol oleomargarine on the market, with the names of manufacturers of those especially high in nonsaturated fatty acids and low in saturated fatty acids. Low sodium content also is preferred.*

C. W. Henney, M.D., Portage, Wis.

Answer.—The Pitman-Moore Company, Indianapolis, has a margarine made from corn oil containing 34 Gm. of linoleic acid per 100 Gm. It also contains 15,000 U. S. P. units of vitamin A per pound and 2,000 U. S. P. units of vitamin D per pound. It meets the standards of the Food and Drug Administration for margarine. It can be purchased only through pharmacies. Standard Brands, Inc., markets a margarine made from corn oil under the name of Fleishmann supreme margarine. It is understood that this product is available in groceries. Available information indicates that this product has only 8 to 10% linoleic acid. It is suggested that the manufacturers be written regarding the sodium content of these products.

The answers here published have been prepared by competent authorities. They do not, however, represent the opinions of any medical or other organization unless specifically so stated in the reply. Anonymous communications cannot be answered. Every letter must contain the writer's name and address, but these will be omitted on request.

SOCIAL SECURITY BILL PROSPECTS

The U. S. Chamber of Commerce warned that passage of the bill to provide health care under the Social Security system "would be a major breakthrough into the welfare state." Pointing out that the bill would cover persons over 65 years of age, the Chamber said in its weekly report to members, "The pressures for doing as much for self-supporting persons under 65 cannot long be withstood."

"The problems of the aging are community problems, and, to a large extent, businessmen's problems, because of their economic as well as social and political implications," said the report. "If solutions do not come from the communities they will surely be imposed from Washington."

The Chamber said "there will be a powerful attempt" made to enact the measure next year. If successful it "probably would lead to a compulsory federal program providing complete medical care for everyone. . . . Once a program of this kind got started, there would be no stopping it.

"Orderly solutions of these problems can have much to do with the welfare and the mood of our aging people, with our national solvency, and with the very character of our form of government, because we are going to be moving along the brink of the welfare state."

The disputed measure, whose chief sponsor is Rep. Aimé Forand (D., R. I.), would provide, through higher Social Security taxes, surgical and hospital care for Social Security beneficiaries aged 65 and older. The House Ways and Means Committee last session held a week of hearings on the bill but took no action. Spokesmen for the administration, the American Medical Association, state and local medical societies, and many allied organizations urged the lawmakers to oppose the measure. The AFL-CIO was the chief advocate.

Two key members of the powerful Ways and Means Committee recently told physicians that a strong drive will be made for the legislation at the next session of Congress. They were Rep. Richard M. Simpson (R., Pa.), top-ranking Republican on the committee, and Rep. Thomas B. Curtis (R., Mo.).

Curtis said that unless a strong counter-drive is started, "I regretfully predict that legislation . . . along these lines will probably be enacted at the next session of Congress."

"All of the increased tax," he said in a statement placed in the *Congressional Record,* "will, of course, be reflected rather quickly in the cost-of-living index."

Representative Simpson, in another statement for the *Congressional Record,* had this to say: "I would observe that present-day conditions demand that the medical practitioner be knowledgeable on political considerations. Such factors as the numerous social programs being advocated which affect the practice of medicine, the increasing importance of the economics of medicine, the 30-year trend toward greater reliance on government paternalism in solving human problems, and the expansion of governmental research and health regulatory activities make it imperative that every doctor keep informed on legislative issues before the Congress."

"It is equally important," he continued, "that doctors fulfill their citizenship duty by standing for principles of government in which they believe as Americans and by supporting the candidates who stand for those principles."

He urged physicians "to become patriotic political forces so that our communities, states, and nation can benefit from their informed viewpoint."

As for the Forand bill, "It is important that those who do not believe that H. R. 4700 [the Forand bill] represents a workable solution to medical care needs for the aged should develop appropriate alternatives," said Simpson.

"It will, of course, be my purpose next year to continue my endeavors in cooperation with the medical profession to guard our citizens and the nation against the disastrous consequences of compulsory national health insurance."

GOVERNMENT STUDIES WAYS OF REMOVING RADIOACTIVITY

Three federal agencies launched a joint research program to find a commercially feasible process for removing radioactive strontium (Sr^{90}) from milk. In announcing the project the Agriculture Department emphasized that "The levels of radioactive fall-out from past nuclear testing do not justify action to decontaminate milk supplies." Rather, the agency said, "The research is designed to provide practical answers to problems that might arise in the future."

In addition to the Agriculture Department, the Atomic Energy Commission and the U. S. Public Health Service are taking part in the research program, which will cost $200,000 a year. The research will be done at a pilot dairy plant at the Agriculture Research Center at Beltsville, Md.

BURROUGHS WELLCOME & CO. (U. S. A.) INC.
Tuckahoe, N. Y.

Strontium-90, a by-product of nuclear explosions, can cause leukemia and bone cancer if it is accumulated in sufficient quantities. The product gets into milk from the plants that cows eat. For more than a year the PHS has been conducting nationwide samplings of milk to determine whether the radioactivity level is safe.

Previous laboratory tests conducted by the AEC and British and Canadian scientists have demonstrated that it is possible on a laboratory scale to remove strontium-90 from milk through the use of chemicals known as ion-exchange resins. These resins duplicate the manner in which soil particles absorb most strontium-90. Leaves absorb from the air most of the radioactivity found in plants.

In the PHS's latest report on milk samplings, the count decreased in 9 of 11 testing stations during the month of July. Only Fargo, N. D., and St. Louis, Mo., showed increases, with the Fargo count of 22.1 $\mu\mu c$ being highest of all stations. However, the level was far below the 80 $\mu\mu c$ of lifetime exposure considered to be the maximum permissible concentration of stronium-90 for human beings. The levels have generally been dropping during the current nuclear test cessation by the United States and Russia.

McCORMACK URGES PASSAGE OF KEOGH-SIMPSON BILL

House Democratic Leader John McCormack (D., Mass.) urged the Senate to act favorably next year on the House-passed measure providing tax deferrals for self-employed persons who set money aside for retirement. In a lengthy summing up of the record of the first session of the 86th Congress, McCormack said the bill is "meritorious legislation and should be enacted into law next year."

Approved by an overwhelming voice vote in the House last winter, the measure was not acted on by the Senate Finance Committee. However, prospects for Senate action next year appear good. The bill, endorsed by many groups of self-employed persons, is intended to give the self-employed, such as physicians and lawyers, similar tax treatment on money saved for retirement as salaried persons now are able to receive.

HUMPHREY PREDICTS NEW HEALTH BILLS

Sen. Hubert H. Humphrey (D., Minn.), chairman of a Senate government operations subcommittee on international health, said "important" legislation in the field will be "formulated and advanced" at the next session of Congress.

The lawmaker did not specify what measures would be considered but said they would be based on his subcommittee's year-long study of international health. In a statement in the *Congressional Record* the senator said he had received many commendations for the subcommittee's work "from the American public in general and from the medical profession specifically."

The subcommittee has published five pamphlets to date, including documents on heart and cancer research around the world, and plans to issue five more before the end of the year, Humphrey noted.

Among other international health bills still pending in Congress are the Senate-passed measure calling for a 50-million-dollar annual program for international medical research and proposals for a "Great White Fleet" of U. S. naval vessels to tour world trouble spots of disease and famine.

PERSONNEL

Five new members were appointed to serve on the Veterans Administration's special medical advisory group of outstanding specialists in medicine and allied scientific professions. The group meets quarterly to advise the VA on its medical program. The new members are Drs. Jasper L. Callaway, professor of dermatology and syphilology at Duke University; Arthur G. DeVoe, professor and chairman of the department of ophthalmology of New York University Post-Graduate Medical School and director of eye service at Columbia University Hospital; Raymond J. Nagle, dean of the College of Dentistry of New York University; Ralph M. Tovell, director of the department of anesthesiology of the Hartford (Conn.) Hospital; and O. Currier McEwen, associate professor of medicine at New York University.

Dr. Marc J. Musser, director of professional services at the Houston, Texas, Veterans Administration hospital was named director of medical research for the VA in Washington, D. C.

Dr. Donald Henry Barron, professor of physiology at Yale University School of Medicine, has been appointed to serve a three-year term on the embryology and development training committee of the National Institutes of Health, U. S. Public Health Service.

Sen. Lister Hill (D., Ala.), chairman of Senate labor and appropriations subcommittees on Health, and Rep. John Fogarty (D., R. I.), chairman of the House appropriations subcommittee on Health, were awarded Albert Lasker awards for "extraordinary public service to the nation's health." The lawmakers were cited for their support of medical research activities. Winners of other Lasker awards included Maurice Pate, executive director, United Nations Children's Fund, New York, and Drs. John Holmes Dingle, Western Reserve University Medical School, Cleveland; Albert Coons, Harvard University Medical School, Cambridge, Mass.; Jules Freund, National Institutes of Health, Bethesda, Md.; and Gilbert Dalldorf, the National Foundation, New York.

MISCELLANY

Child Health Day will be observed on a new day next year—the first Monday in October—under a joint congressional resolution signed by President Eisenhower. The change was made to link Child Health Day more closely to Universal Children's Day, which many nations observe on the October date. In addition, the previous date of May 1 was the same as that of Loyalty Day.

Four research centers are studying glaucoma screening and diagnostic techniques through research grants awarded by the National Institutes of Health. Scientists at Johns Hopkins University, University of Iowa, Washington University, and University of California are investigating how to define glaucoma in the earliest clinical stages, methods of detecting glaucoma earlier than present diagnostic methods permit, and the relation of measurable eye abnormalities such as increased ocular tension to the disease, and they are evaluating the efficiency of present diagnostic techniques.

subjective and objective improvement

'MYLERAN'® brand

BUSULFAN

For the Management of Chronic Myelocytic Leukemia

"All patients showed alleviation of symptoms, restoration of normal blood values and some regression of the spleen within the first two months of therapy. Complete clinical and hematologic remissions developed in almost every case, and were maintained by small daily doses."[1] **Tablets of 2 mg.**

'PURINETHOL'® brand

6-MERCAPTOPURINE

For Acute Leukemia and Chronic Myelocytic Leukemia

"A high percentage of temporary remissions can be achieved with this drug in children with acute leukemia. Occasional remissions also occur in adults but the results are generally not as satisfactory as with the children."[2] **Tablets of 50 mg.**

'LEUKERAN'® brand

CHLORAMBUCIL

In the Management of Chronic Lymphocytic Leukemia

"It appears that CB 1348 [Chlorambucil] is an effective agent for the control of certain of the manifestations of chronic lymphocytic leukemia. It causes the leukocyte count to decrease, reduces the size of enlarged organs, and produces considerable subjective improvement."[3]

Sugar-coated Tablets of 2 mg.

Facilities for complete and frequent blood counts must be available for patients receiving 'Leukeran', 'Myleran' or 'Purinethol'.

STATUS OF FIELD TRIALS WITH AN ORALLY ADMINISTERED, LIVE ATTENUATED POLIOVIRUS VACCINE

Albert B. Sabin, M.D., Cincinnati

Between October, 1958, and early September, 1959, about 11 million children outside the United States received by mouth a vaccine prepared from strains of poliovirus that had been selected and studied in this country by the author. Preliminary studies had shown that the establishment of these strains in susceptible persons was neither associated with any distinct illness nor was it followed by detectable late manifestations in the nervous system. The spread of the three vaccine strains was comparable to that of the naturally occurring viruses. The presence of other viral intestinal infections sometimes suppressed the multiplication of the orally administered poliovirus vaccines. In the absence of interference, antibody was demonstrable within 7 to 10 days after infection. A large body of evidence now indicates that the live vaccine is safe for both the vaccinated children and the community.

LIVE, attenuated poliovirus vaccine differs from other live virus vaccines hitherto used in human preventive medicine in that not only does it produce a clinically unrecognized infection in those who swallow it but under appropriate conditions this infection can also spread to other persons. If the contacts are solidly immune as a result of natural infection, the virus does not multiply in them; if they are only partially immune, or nonimmune, or have immunity as a result of inoculations with Salk vaccine, the virus multiplies in their intestinal tract and produces immunity in those who had none or boosts any preexisting partial immunity. While the capacity for spread provides an excellent opportunity for achieving immunization of a population beyond the actual numbers vaccinated, it is essential that the spreading virus remain avirulent for human beings.

Extensive studies on small groups of human beings recently reached a stage at which the basic question of the safety of such a vaccine for those who receive it by direct feeding, as well as for those who may be immunized by contact infection, could be answered not by additional laboratory or monkey tests but only by field trials on a very large scale, as was recommended in 1957 by the expert committee on poliomyelitis of the World Health Organization.[1] It was also evident that definitive answers could be obtained only by field trials in countries with large, nonimmune populations in which the Salk vaccine was not being used on a sufficiently large scale to prevent a proper evalua-

tion of the safety of the live vaccine for the community as well as for the individual person. It was because of this scientific reason and also in order not to interfere with the maximum utilization of the already established Salk vaccine that no attempt was made to carry out large field trials in the United States.

Scientists in many different parts of the world undertook to carry out the studies which those in the United States, including myself, who developed the vaccine strains and carried out the basic studies were unable, for the reasons mentioned, to carry out. Between October, 1958, and early June, 1959, approximately 4,500,000 people, mostly children, in various republics of the U. S. S. R., in Czechoslovakia, in Singapore, and in Mexico received vaccine prepared from the strains that I had selected and studied in the United States. I have been informed by Prof. M. P. Chumakov of Moscow that up to July 15, 1959, approximately 6,374,000 persons will have been fed this vaccine in various parts of the U. S. S. R. More than 1 million children in Central and South America have been fed poliovirus vaccines containing strains developed by Koprowski and associates (now called the Lederle strains), and large numbers of children in Africa and Poland have been fed the type 1 "Chat" strain, which is derived from and is similar to the earlier Koprowski-Lederle type 1 virus. I should now like to review briefly some of the studies that led up to the large field trials and to indicate the lessons that have already been learned from those trials with which I am personally familiar.

At the end of 1956, after four years of extensive tests on many experimentally modified and naturally occurring attenuated strains of poliovirus which demonstrated distinct differences among the various strains, I selected from the progeny of single virus particles the strain of each of the three types which I regarded as most suitable for further tests on increasingly larger numbers of human beings.[2] With the cooperation of the Merck, Sharp & Dohme Research Laboratories about 25 liter lots of each of the three strains were prepared—amounts sufficient for trials on more than 2 million human beings. Portions of these large lots were then used for basic studies on small groups of human beings in the United States by myself,[3] Horstmann and associates,[4] Gelfand and associates,[5] and Koprowski (at the Wistar Institute, on the type 2 strain)[6]; in Holland by Verlinde and associates,[7] in Mexico by Ramos-Alvarez and Gomez,[8] in the U. S. S. R. by Smorodintsev and associates,[9] in England by Clarke and associates,[10] in Sweden by Wesslen, in Chile by Contreras and Scroggie, and in Japan by Kitaoka. The results of these three latter studies will be published in the near future.

Time does not permit a detailed review of all the results of these preliminary basic studies, but some of the important points need to be mentioned here in order to provide a background for understanding the issues and the problems that had to be resolved by the large field trials.

Illness Attributable to the Vaccine

In none of the preliminary studies, involving several thousand children and adults, was there any evidence that multiplication of the vaccine strains in susceptible persons was associated with any distinct illness. Because no group of children or adults observed over a period of weeks or months is ever free of some pharyngeal or alimentary disturbances, it is difficult to say that such mild disturbances never occur. However, careful studies by many observers failed to reveal any early or late manifestations referable to involvement of the nervous system.

Studies in the United States [11] and Sweden[12] have indicated that during the course of spontaneous immunization with the various naturally occurring strains of poliovirus, one may expect over the years one case of paralytic poliomyelitis for each 100 to 300 children who are converted from susceptibility to immunity. This rate has been estimated to be much higher for adults. Furthermore, since about 85% of all paralytic poliomyelitis over the years is caused by the type 1 virus, it is also evident and known that for the type 2 and type 3 viruses thousands of persons become inapparently infected in nature for each case of paralytic poliomyelitis caused by these types. It is also necessary to remember that these estimates do not apply to persons living under conditions of poor sanitation and hygiene, among whom the rate of inapparent infection and immunization is known to be much higher.

These estimates provide some basis for estimation of the numbers of susceptible persons who must be tested to permit an evaluation of the safety of a live, attenuated poliovirus vaccine. In countries with susceptible populations comparable to those in the United States and Sweden prior to the use of Salk vaccine, one would expect about 5,000 cases of paralytic poliomyelitis among 1 million susceptible children in whom a type 1 vaccine strain multiplied, if its virulence were comparable to the composite of the avirulent, mildly virulent, and highly virulent strains of type 1 virus that are known to occur in nature. Therefore, the absence of any such case clearly attributable to the vaccine, among 1 million or more susceptible persons, could be regarded as valid evidence of the safety of the vaccine.

Spread of the Vaccine Strains to Contacts

The accumulated information indicates that the spread of the vaccine strains is in most respects comparable to that of the naturally occurring viruses, in that it is mediated by fecal contamination, predominantly by small children in intimate association with susceptible persons at play or in the home. Conditions of poor sanitation and hygiene contribute to spread only if the infected child is surrounded by susceptible persons, but insofar as populations under such conditions have a high incidence of naturally acquired immunity, the chain of transmission is more readily broken. These findings have a special significance for the conduct and evaluation of large field trials.

For determining the extent of spread of the vaccine strains and evaluating the effects of such spread, populations having generally poor sanitation and hygiene are paradoxically less suitable than populations having better sanitation and hygiene for the following reasons: 1. At any one time 5 to 25% of the most susceptible child population is often already infected with naturally occurring polioviruses of varying degrees of virulence. 2. The incidence of naturally immune persons with resistant intestinal tracts is so high that only massive administration of the vaccine strains in the briefest possible period of time may have some chance of competing with the large numbers of naturally occurring polioviruses and other enteric viruses.

Alteration in Characteristics of Virus After Multiplication in the Intestinal Tract of Vaccinated Persons and Contacts

Whether the virus is substantially modified in the intestinal tract of vaccinated persons and contacts has naturally been a source of major concern in connection with live poliovirus vaccine and has been extensively studied by myself[3] and other investigators[13] who obtained strains from me. All are agreed that, under conditions which preclude infection with naturally occurring polioviruses, it is possible to demonstrate the presence of less attenuated virus in the stools of some vaccinated persons and contacts by inoculation into the central nervous system of monkeys. This is much less frequent and less marked with the type 1 and type 2 strains that I selected than with the type 3. In none of the studies has a virus fully neurovirulent for monkeys been recovered from the stools.

Furthermore, the less attenuated virus appears to constitute only a portion of the total poliovirus population in the intestinal tract. The major portion of the virus which is more highly attenuated, by virtue of numbers or other properties, has an advantage over the less attenuated virus in the human intestinal tract. The less attenuated virus, which usually appears later in the course of viral multiplication, at a time when the quantity of virus in the stool is smaller and is less likely to be transmitted naturally, as a rule disappears after more prolonged multiplication in the vaccinated person or contact. The monkey's nervous system, however, selects the smaller portion of the more neurotropic virus in a manner comparable to the selection of a few penicillin-resistant streptococci by a penicillin-containing culture medium.

The most extensive studies on this subject were carried out by Smorodintsev and his associates in Leningrad. They studied the neurovirulence of the excreted virus of each of the three types, after each of 10 consecutive passages in susceptible children and also after a minimum of four natural passages in contacts. The Russian investigators reported that no greater increase in neurotropism was found after multiple passages than after a single passage and that when virus of greater neurotropism for monkeys was fed it could not be detected in the next passage in the human intestinal tract. The idea of a "fixed" virus has meaning only in relation to its propagation in a medium, in which variants have no selective advantage. If all polioviruses had the capacity of becoming progressively more virulent for man on continued propagation in the human intestinal tract, we would expect to find only highly virulent polioviruses in nature; instead, the viruses recovered from healthy children have exhibited a broad spectrum of low to high neurovirulence, as measured by intracerebral inoculation of monkeys.[2]

It is also important to remember that nature is already full of polioviruses more highly neurovirulent than any that have been found to be excreted by vaccinated persons or their contacts, and it is these naturally occurring virulent viruses that one is attempting to eliminate by a rapid production of so many persons with resistant intestinal tracts that they will have no place in which to multiply.

As the work progressed it became increasingly evident that the ultimate epidemiologic significance for man of the changes that have been observed in the excreted polioviruses could be determined not by any additional tests in culture mediums or in monkeys but only by the effects of contact immunization in large field trials in which about half of a highly susceptible population remained unvaccinated, in regions with a low incidence of naturally occurring polioviruses.

Multiplication of Vaccine Strains, Antibody Response, and Resistance of the Intestinal Tract to Reinfection

All three vaccine strains have been found to multiply extensively in the intestinal tracts of children and adults without antibody or with antibody resulting from inoculations of Salk vaccine, when they were administered one at a time in a dose of 0.01 ml. of the culture fluid. A few adults without demonstrable antibody were found to be resistant to this dose, and there are observations which indicate that resistance of the intestinal tract to certain doses of virus may follow infections which are not associated with readily demonstrable antibody. My own studies as well as those of Smorodintsev have demonstrated extensive resistance of the intestinal tract to reinfection with the same dose of each of the three types of vaccine virus during the first year after oral vaccination. Reinfection tests that I carried out two years after vaccination indicated that the type 1 virus completely failed to multiply in some and multiplied only briefly in others and the type 2 virus failed to multiply in all, while the type 3 virus multiplied for a limited period in all of the eight persons tested. The antibody levels persisted without significant change for two years after oral vaccination, and no relation was found between the level of antibody and resistance to intestinal multiplication of the virus.

In the absence of interference, antibody is demonstrable within 7 to 10 days after infection. Simultaneous feeding of all three types to persons who are susceptible to all three types, and of two types to persons who are susceptible to both, occasionally results in partial or complete suppression of one of the types. Of the three strains that I selected the type 2 was found to be dominant to both types 1 and 3, and type 3 was dominant to type 1. When type 1 was fed first, the type 3 virus readily took over when it was given three to four weeks later, and the type 2 readily terminated the multiplication of type 3 when it was fed after a similar interval. In tests carried out by Smorodintsev[14] and Chumakov[15] on large numbers of children under 3 years of age who received the three types in the order mentioned, 96 to 100% developed antibody for all three types. These investigators also obtained a high incidence of conversions from negative to positive when they fed a mixture of all three types to young children in institutions. The feeding of a mixture of all three types may prove to have certain advantages as a practical public health measure, but only under conditions conducive to extensive secondary spread of the vaccine strains may one expect to obtain a satisfactory result after a single administration.

Interference by Other Enteric Viruses

Intestinal infections with a variety of viruses, including enteric cytopathogenic human orphan virus (ECHO), Coxsackie virus strains A and B, and adenoviruses, as well as naturally occurring polioviruses, have been found to be capable of temporary, partial, or complete suppression of multiplication of the orally administered poliovirus vaccine strains.[16] This interference phenomenon may be expected to play an especially prominent role under conditions of poor sanitation and hygiene in subtropical and tropical regions. The natural spread of the vaccine strains may provide a possible solution to the problem, but only if the poliovirus vaccine strains should be administered on a massive enough scale in a short enough time to outnumber the viruses that are undergoing natural dissemination. A program of administration of the vaccine strains immediately after birth, before the intestinal tract has been invaded by other viruses, needs further extensive study and may provide the best ultimate procedure for immunization with live poliovirus vaccine, after the initial mass vaccination of a population has been accomplished.

Field Trials

The minimum requirements for large-scale field trials are (1) a preliminary serologic survey of the population adequate to permit an estimate of the number of vaccinated and unvaccinated persons without antibody to each of the three types of poliovirus; (2) careful clinical and virological surveillance of the vaccinated and unvaccinated population over a period of many months, including one summer season; and (3) an estimate of the immunogenic effectiveness of the vaccine, under the conditions obtaining in the field, by studies on paired serum specimens obtained at random from both vaccinated and unvaccinated persons.

Early in 1958 Ramos-Alvarez and Gomez[8] in Mexico City fed all three types of the virus at monthly intervals to approximately 3,000 children under 5 years of age. The absence of any untoward reactions in these children and in their contacts during the remainder of the year provided the basis for tests on a larger scale on more than 170,000 children in four cities in 1959. These studies are as yet incomplete and no conclusions are warranted. It is already evident, however, that the spontaneously occurring polioviruses and other enteric viruses in the population played an important role in interfering with the full effectiveness of the vaccination.

Hale and associates[17] recently reported the results of their use of my type 2 vaccine in about 200,000 children under 10 years of age during the course of a type 1 epidemic of poliomyelitis in Singapore. The estimated total number without type 2 antibody has not yet been calculated, but the serologic survey indicated that 87% of the children under 2 years of age, 75% in the 2-to-3-year-old group, and 41% in the 3-to-4-year-old group had no antibody for type 2 virus. Despite the fact that a virological survey revealed that, of the children who came to be vaccinated, about 3% were carriers of type 1 poliovirus and 18% of other enteric viruses, the type 2 virus apparently multiplied in most of the type 2–susceptible children, as indicated by virus excretion and antibody formation. Among the children aged 2 to 10 who had no type 2 antibody prior to vaccination, 93 to 100% were found to have antibody three to four weeks later; the incidence of converters was only 70% in the 3-to-6-month-old children and 86% in the 7-to-23-month-old group. No cases of type 2 paralytic poliomyelitis appeared in any of the vaccinated children, and a single case of paralytic poliomyelitis with only type 2 virus excreted in the patient's stools occurred during the entire period among the 300,000 unvaccinated children of the same age group. The occurrence of 179 type 1 paralytic cases among the unvaccinated compared with only 6 among the vaccinated, during the period of one week after beginning vaccination to the end of the epidemic, requires further detailed analysis but is in accord with the theoretical expectations of partial protection of type 2 vaccine against type 1 paralytic poliomyelitis.

In Czechoslovakia a large proportion of the child population had received three intracutaneous doses of Salk vaccine, and, while the incidence of paralytic poliomyelitis was reduced in this group, 75 of the 169 cases in children under 16 years of age from June to December, 1958, occurred in the triply vaccinated group. To provide a basis for future policy the Ministry of Health, under the direction of Skovranek and others,[16] carried out a large trial with live poliovirus vaccine in one part of the country and gave a fourth dose of Salk vaccine in another and no further inoculations in the rest of the country. The live virus vaccine, a part of the large lots that I had prepared, was given only to 2-to-8-year-old children who had previously had three doses of Salk vaccine. However, a serologic survey carried out just before the program indicated that of the 143,377 who received the type 1 vaccine an estimated 48,172 were without demonstrable type 1 antibody; for type 3 it was 54,856 negative of 127,290; and for type 2 it was 23,406 negative of 114,510.

The three types were given in the order mentioned at four-week intervals beginning Dec. 15, 1958. The total number of inhabitants in the regions in which the live vaccine was used is about 2,600,000, among whom at least 100,000 susceptible persons were available for contact infection. Serologic tests on paired serum specimens obtained at random before and four months after the vaccination program indicated that for type 1 the conversion rate from negative to positive was about 95% in the vaccinated group, 42 to 50% in the unvaccinated children under 10 years of age, and 26% in older unvaccinated persons. Somewhat lower but comparable conversion rates in vaccinated and unvaccinated persons were found for the type 2 and type 3 viruses. Not a single case of poliomyelitis attributable to the virus fed was observed in any of the vaccinated children or their familial associates, and no increase in poliomyelitis morbidity was recorded in the unvaccinated population in the regions where the live virus was used on a massive scale or in the remainder of Czechoslovakia during the first five months of 1959. The Czech investigators concluded that the live vaccine was safe for both the vaccinated children and the community.

The largest and most significant trials were carried out in many republics of the U. S. S. R. under the direction of Chumakov[15] of Moscow and Smorodintsev[14] of Leningrad, to whom I am indebted for the following information. The extensive serologic surveys carried out in the Baltic republics of Estonia, Latvia, and Lithuania, as well as in Byelorussia, Moldavia, and other parts of the U. S. S. R., prior to the initiation of vaccination with live poliovirus vaccine, yielded results comparable to those obtained in many areas of the United States prior to the initiation of the Salk vaccine program. In their preliminary tests early in 1959 the Russian investigators used portions of my original large lots of vaccine on about 70,000 persons. For the subsequent mass tests they used secondary and tertiary lots which they prepared from the original vaccine that I sent them. Comparative tests that they carried out, and tests performed in my laboratory, showed that these secondary and tertiary lots were entirely comparable to the original. By the end of May almost 4 million persons, mostly under 15 years of age, had received the vaccine in the U. S. S. R. According to the serologic surveys already completed, about 30% of these were without antibody for any one type of poliovirus. In Latvia, White Russia, and Moldavia, Smorodintsev estimated that of the 1,400,000 persons vaccinated about 227,000 had triple-negative reactions. In most of the republics only about 50 to 60% of the indicated age groups were vaccinated and the remainder are available for judging the effects of spread of the vaccine strains. Strict clinical and virological surveillance of all suspected persons in the vaccinated and unvaccinated populations led the Russian investigators to conclude at the end of June that the vaccine was safe for the vaccinated persons as well as for the community. Not only was there no increase in the usual number of cases in the unvaccinated during the spring months but by the middle of June the usual seasonal increase had failed to appear. Vaccination continued in the U. S. S. R. until July 15, by which time more than 6 million persons had received live poliovirus vaccine from the secondary and tertiary lots that they had prepared.

The events of this summer in the U. S. S. R. and Czechoslovakia will be followed with the greatest of interest, for they should provide a basis for a final decision on the safety of this live poliovirus vaccine, not only for those who receive it but also for those who become immunized by contact infection after multiple cycles of spread among the unvaccinated population.

Addendum

At the September meeting of the European Association Against Poliomyelitis, Dr. V. Skovranek of the Ministry of Health of Czechoslovakia reported that the seasonal increase in paralytic poliomyelitis occurred as usual, during the months of July and August, in the regions of the country where three or four doses of Salk vaccine had been administered to most children but not in those where live poliovirus vaccine had been given between December, 1958, and February, 1959, to only about 140,000 children out of a total population of all ages of about 2,600,000. Prof. M. P. Chumakov, *in a personal communication, reported as follows: "By September first* total number vaccinated with Sabin vaccine exceeded 10 million, including 8,680,000 with vaccine prepared in Moscow. In Estonia and Lithuania number of polio cases in June, July and August ten times lower compared to average for same period in many years."

These observations, made during the summer months in Czechoslovakia and the U. S. S. R., provide the definitive information that was being awaited regarding the safety of this live poliovirus *vaccine not only for those who receive it but also* for those who become immunized by contact infection. The occurrence of several thousand cases of paralytic poliomyelitis in the United States and Canada during the past year indicates that, while the available Salk vaccine has undoubtedly prevented a great deal of paralytic poliomyelitis, it is inadequate in eliminating the disease or providing full protection. In my opinion, the persons responsible for public health in the United States must *take immediate steps to check on the validity of the results of these immense field trials with this live* poliovirus vaccine in the U. S. S. R. and Czechoslovakia and in the meantime do everything possible to have it available for widespread use before the 1960 poliomyelitis season.

The author's studies were aided by grants from The National Foundation.

STATISTICAL EFFECTS OF ASIAN INFLUENZA.—The average length of life (expectation of life at birth) in the United States was 69.3 years in 1957, or 0.3 years below the all time high registered in 1954 and again in 1956. The slight setback in 1957 resulted largely from the widespread prevalence of Asian influenza and other upper respiratory infections during the late months of the year. Even so, the 1957 experience was more favorable than that for any year prior to 1954, the average length of life being 2½ years greater than in 1947 and 20 years above that around 1900. A century ago the average lifetime was only about 42 years —three fifths the current figure.—Longevity of the American People in 1957, (Statistical Bulletin) *Metropolitan Life Insurance Company,* July, 1959.

REACTIONS TO POLIOMYELITIS VACCINE

Charles N. Christensen, M.D., Indianapolis

Complaints received by a manufacturer from physicians concerning unfavorable reactions to formaldehyde-inactivated poliomyelitis vaccine have been analyzed. The use of 184,000,000 doses of vaccine was followed by 284 complaints, of which 138 concerned only stinging or burning local pain. In six instances the symptoms suggested poliomyelitis, but in no case were the three essential criteria of inoculation-induced poliomyelitis satisfied. The most severe reactions reported in connection with this vaccine were four anaphylactoid reactions, and in each case recovery was complete. The most frequent types of reaction were allergic (56 cases) and neurological (37). The complaint rate was therefore extremely low, and the relative safety of the vaccine was apparent.

Poliomyelitis vaccine is unique among immunizing biologicals for the very low reaction rate which attends its use. This report is based on the data on reactions reported to Eli Lilly and Company in connection with the production of over 184,000,000 ml. of poliomyelitis vaccine.

Anticipated Reactions

When the vaccine was first made available, certain possible reactions were anticipated.[1] Encephalitis, meningoencephalitis, neuritis, and other neurological illnesses were considered because of the experience with other immunizing biologicals. Such reactions have been recorded after the administration of smallpox vaccine, pertussis vaccine, diphtheria toxoid, tetanus antitoxin, and many other agents.

Because the virus was propagated in monkey kidney cells, the vaccine theoretically could contain Rh antigen and kidney protein. Therefore, hematological illness due to Rh sensitization and renal disease due to sensitization with renal protein were considered possible.

It was also anticipated that certain allergic manifestations might occur, because all manufacturers, in addition to using monkey kidney protein, used penicillin, streptomycin, poliomyelitis virus, phenolsulfonphthalein, and a synthetic medium of many constituents in some phase of the production of poliomyelitis vaccine. Furthermore, the Lilly poliomyelitis vaccine, which is made by the Maitland (minced monkey kidney) technique, contains thimerosal (Merthiolate) and sodium ethylenediaminetetraacetate. Other manufacturers use one or more of a variety of substances in the production of their vaccine: polymyxin, trypsin, benzethonium, methylparaben, propylparaben, and calf or horse serum. With this impressive list of possible allergens, allergic reactions were rightfully considered a potential hazard.

Although the list is long, the concentration of the various ingredients is extremely small. The final concentration of total nitrogen (from the medium itself, poliomyelitis virus, monkey kidney, and possibly other proteins produced during viral growth) is 0.35 mg. per milliliter. The synthetic medium contains 0.25 mg. of nitrogen per milliliter. Recent exhaustive studies in our laboratories have shown the penicillin content of Lilly poliomyelitis vaccine to be less than 0.001 unit per milliliter in about 80% of lots; all lots contain less than 1.0 unit per milliliter. Interestingly, if vaccine from a lot containing a detectable amount of penicillin is added to vaccine containing no detectable penicillin, within 24 hours penicillin cannot be identified in the mixture. This suggests the presence of trace amounts of a penicillin-destroying substance, such as penicillinase, in the vaccine.

Incidence of Reactions

Several investigators have assessed the incidence of reactions to poliomyelitis vaccine. In the first of these studies, done in preparation for the field trials of 1954, 7,507 children were inoculated with commercially prepared vaccine[2]; the only reaction encountered was one instance of urticaria. In the field trials themselves,[3] minor reactions (faintness, dizziness, nausea, slight rash, and colds) were observed in 0.6% of children inoculated, and major reactions (severe rash, fever, severe pain in arms and legs, and central nervous system or renal disease) in 0.004%, i. e., 1 in 25,000.

It is significant that controls were employed only in the field trials. Then the incidence of allergic symptoms after injection was similar in those given vaccine, those given placebos, and those who received no injection but were merely observed.

One study,[4] which arrived at an incidence of reactions of 2.51%, is difficult to evaluate because of the lack of control subjects and the practice of recording as a separate reaction each symptom of any one person.

More recently, the reactions which followed the administration of 138,528 injections were recorded.[5] Local irritation and pain at the injection site occurred in 15% of persons; generalized tiredness and headache were relatively common in adults; more specifically, fever, urticaria, skin rash, asthma, polyarthritis, heaviness in the vaccinated arm,

---

transient flaccid paralysis, and meningoencephalitic complications were recorded a total of 82 times—an incidence of less than 0.1%.

Report of Reactions

The information presented in this report is derived from the complaints received by Eli Lilly and Company from physicians concerning reactions to poliomyelitis vaccine. All complaints are included (see table), and no attempt has been made to eliminate those which may not have been due to the vaccine. In many instances, the reporting physician indicated that he did not believe that a particular reaction was related to the vaccine but that he was reporting it either for our information or in the course of an inquiry about our receipt of similar complaints. The classification is arbitrary, and a particular complaint could have been placed in one of several categories. However, for simplicity, each complaint is listed only once according to what appears to be the dominant symptom or symptoms.

*Summary of Reactions Reported to Manufacturer 1955-1959**

Reactions		Total
Pain on injection		138
Neurological		37
"Poliomyelitis" after injection	6	
Weakness (not poliomyelitis)	3	
Meningeal irritation	9	
Encephalitis	5	
Convulsions	4	
Syncope	5	
Neuropathy of facial nerve (Bell's palsy)	3	
Paresthesias	2	
Allergic		56
Anaphylaxis	4	
Urticaria	21	
Skin rashes	14	
Miscellaneous	17	
Febrile reaction		11
Local reaction		17
Miscellaneous		17
Unspecified		8
Grand total		284

*During this interval, over 184,000,000 ml. of vaccine was released.

There have been a total of 284 complaints (see table). Of course, this does not represent all of the reactions which have occurred with the use of the product, and, therefore, the incidence of reactions cannot be computed from these data. Because the product is new, it seems likely that most of the severe reactions would have been reported. In addition, it is probable that the company is notified of a greater percentage of the less significant reactions than is the case with other more-established biologicals. This is perhaps borne out in some measure by the fact that nearly half (138) of the total number of complaints have been concerned with burning or stinging pain on injection. This leaves 146 possibly significant complaints recorded in connection with the use of 184,000,000 doses of vaccine, a complaint rate of 1 per 1,200,000.

In six instances, a clinical picture resembling poliomyelitis was recorded after the injection of the vaccine. Weakness in the extremities not diagnosed as poliomyelitis was reported three times; in two patients, it was transient; in the third case, an adult male developed weakness of his left leg after a second injection and more severe weakness after a third injection.

Meningeal irritation includes all complaints in which a stiff neck was prominent in the symptomatology. In various patients, headache, pain in the back or legs, fever, and vomiting were prominent. In none of the patients with encephalitis were laboratory data available to identify the etiological agent. Convulsions were reported four times. In three instances, they occurred almost immediately after injection of the vaccine; in the fourth, 17 convulsions occurred seven days after a second dose of vaccine. Syncope was apparently related to emotional stimuli associated with the injections. Neuropathy of facial nerve (Bell's palsy), with onset 5 to 10 days after administration of the vaccine, was reported on three occasions. In the two patients with paresthesias, recovery was complete within 24 hours.

Four instances of anaphylactoid reactions were reported. In two, further details were not available. In the other two, there was a history of previous allergy, and the evidence indicates that vaccine may have been the cause of the reactions. Recovery in all was complete. A subsequent skin test in one patient indicated sensitivity to the vaccine; perhaps these reactions could have been avoided by prior skin testing. These anaphylactoid reactions are the most severe reactions that have been reported in connection with the vaccine.

Urticaria occurred within a few hours up to 10 days after administration of the vaccine. It occurred in persons with and without previous histories of allergy as well as in persons known to be sensitive and in those known to be not sensitive to penicillin. The cases of skin rash usually concerned nondiagnostic macular or maculopapular erythematous lesions but included two patients who had exfoliative dermatitis. Included in miscellaneous allergic reactions were four examples of local reactions observed in patients known to be sensitive to mercury, two patients who had symptoms similar to serum sickness, one who developed periorbital edema and conjunctivitis 24 hours after administration of vaccine, and a young boy with a history of severe allergy who had local erythema at the injection site after the administration of vaccine. In addition, in nine instances, physicians stated that patients had allergic reactions, but there was no description of the reaction or the circumstances in which it occurred.

Patients who had febrile reactions had many other manifestations, including headache, croup, adenitis, sore throat, myalgia, conjunctivitis, and in one case a rash. Local reactions consisted of erythema, induration, and swelling at the site of injection with or without fever.

Under miscellaneous reactions were included a variety of complaints which could be classified under one of the other headings. The fact that each one was reported only once or twice in connection with this vast amount of vaccine is substantial evidence that these were coincidental occurrences and had no relation to the vaccine.

Comment

Since the introduction of poliomyelitis vaccine there has been concern that the vaccine might precipitate or, by containing live virus, actually cause poliomyelitis. Evaluation of this point is hampered by the fact that when millions of persons are immunized, almost certainly some are infected with the virus at the time of injection of vaccine or they acquire infection soon after vaccine is given.

Poliomyelitis due to the injection of live virus has three characteristics: its onset occurs 4 to 14 days after injection, paralysis will tend to occur in the inoculated extremity, and more cases will occur after the use of the suspect lot of vaccine than would be expected from coincidental infection. From the data of the Poliomyelitis Surveillance Unit of the U. S. Public Health Service, it is apparent that never has the use of any lot of the vaccine under discussion been followed by paralytic disease with these three characteristics. In addition, no commercial lot of this vaccine has ever been shown to contain live poliomyelitis virus by meticulous tissue-culture and monkey safety tests. On this basis, it seems likely that cases of poliomyelitis which occurred after injection of the vaccine were coincidental to its use.

The significance of the various other neurological manifestations is difficult to assess. Such illnesses have been associated with other immunizing agents, and in the final evaluation it may be that poliomyelitis vaccine will be implicated in some of them. With such an extremely low incidence, the possibility is great that intercurrent illness is responsible for most of them.

It appears that the risk of sensitization to monkey kidney protein or the Rh antigen, if it exists at all, is very small. Asthma after injection of vaccine has been reported in one child sensitive to monkey tissue.[6] There is also one case of anemia among our miscellaneous complaints, but the evidence would indicate that the vaccine was not responsible.

Several articles have been published reporting allergic reactions which have followed administration of poliomyelitis vaccine. When the incidence is so low, it becomes difficult to know if the vaccine per se was responsible. Wolf and Pinsky[7] observed typically allergic reactions after the administration of placebos.

Penicillin has been incriminated as a cause of the allergic reactions. Antibiotics cannot be omitted from the manufacturing process of poliomyelitis vaccine. They are essential to prevent bacterial contamination of the tissue culture. In the process of making vaccine, monkey kidney cells are grown for six days in nutrient medium to which penicillin and streptomycin have been added. Then, the fluid is removed and replaced with fresh medium, again containing penicillin and streptomycin. At this time, poliomyelitis virus is added and allowed to grow for four days at 37 C. The virus-laden fluid is then separated from the monkey kidney cells and subjected to formaldehyde inactivation for 13 days at 37 C. Thus, after the final addition of penicillin to the tissue-culture fluid, it is incubated at 37 C for a total of 17 days. At the end of this time, penicillin is usually not detectable. With so many other allergens in the vaccine, considerable confirming evidence would be needed to establish an association between a given allergic manifestation and penicillin.

Certainly, a very high degree of sensitivity to penicillin, so high that it is only rarely encountered, would have to exist if the penicillin in the vaccine were to be a cause of reactions. In the field trials, children sensitive to penicillin were given the vaccine without difficulty. In addition, Siegal[8] gave the vaccine to persons known to be penicillin-sensitive and concluded that no hazard should accrue from the administration of the vaccine to such people. Since an infinitesimal quantity of penicillin is probably present in all poliomyelitis vaccine, it has been suggested that penicillinase be added to the vaccine before it is given to penicillin-sensitive persons. If one elects to use penicillinase, it should be recognized that it too is a foreign protein and that allergic reactions to it have been reported.[9]

For a proper perspective, these data may be compared with information about other immunization procedures. In 1947, 45 cases of encephalitis and four deaths occurred after about 5 million smallpox vaccinations in New York City.[10] Berg[11] collected the reported cases of neurological complications of pertussis immunization. He found 107 cases with 15 deaths since 1933. When the millions of doses of poliomyelitis vaccine are viewed against this background, the relative safety of the vaccine is apparent.

Summary

Reactions have been reported to Eli Lilly and Company in connection with over 184,000,000 doses of its poliomyelitis vaccine. Of a total of 284 complaints, 138 were concerned with burning or stinging pain on injection. There were 37 neurological, 56 allergic, 11 febrile, 17 local, 17 miscellaneous, and 8 unspecified reactions, or a total of 146 possibly significant reactions—a "complaint rate" of 1 per 1,200,000 doses. Because of incomplete reporting, the data do not allow an estimate of the incidence of reactions, but they do indicate that reactions are extremely infrequent and that allergic reactions are not a serious problem.

STUDY OF THREE HUNDRED EIGHT OPERATIONS FOR STRICTURE OF BILE DUCTS

FOLLOW-UP PERIODS OF ONE TO FIVE OR FIVE TO TWENTY-FIVE YEARS

Waltman Walters, M.D.

and

John A. Ramsdell, M.D., Rochester, Minn.

The late results of operations to correct stricture of the bile ducts were investigated in 265 patients who responded to requests for follow-up study. They had undergone altogether 308 operations from 1 to 25 years before the time of the study. In every case but one the stricture followed surgical injury. The operations done to correct the stricture were usually either choledochocholedochostomy or choledochoduodenostomy, and the results of these two were about the same, with 68 and 69% of good or excellent results in the patients reporting. Even when strictures were so located that no patent extrahepatic duct was visible, it was often possible to relieve the biliary obstruction by special procedures. Two patients were pregnant at the time of operation, and there were 19 subsequent deliveries in 14 patients, all but one delivery being normal, full-term, and spontaneous. Among the 191 patients followed up for more than five years, there were 28 deaths and 16 of these were ascribed to cirrhosis or liver failure.

Prior to Nov. 4, 1958, one of us (W. W.) had operated on 429 patients with stricture of the bile ducts at the Mayo Clinic. On some of these patients more than one operation had been performed. On several other occasions reports of follow-up studies have been made on some or all of these cases. On this occasion, it seemed advisable to study the results of the operations used in the correction of the strictures after a lapse of 5 to 25 years.

We heard from 191 patients in this group (all of whom were operated on prior to 1953), and these 191 patients had had 217 operations. Sixty-one per cent of the operations gave excellent or good results and 7% fair results (table 1). We then decided to extend the study to the patients operated on more recently, that is, from 1953 through 1957 with a follow-up of one to five years. Seventy-four patients on whom 91 operations have been performed were heard from in this group. Twenty-two were men and 52 were women. As might be expected, the results were a little better with a shorter follow-up. Both excellent and good results showed an increase of 5 percentage points, with the poor

Read before the Section on Surgery, General and Abdominal, at the 108th Annual Meeting of the American Medical Association, Atlantic City, June 11, 1959.

results being a little more than half (19%) as large as those of the long-term group. The operative mortality for the entire group was about 5%. Results of the operations were about the same for the two sexes in the patients operated on one to five years previously.

Pregnancy in Follow-up Period

Four women in the group volunteered information that they had had pregnancies which went on to term after operation. Two of these were pregnant (one for one month and the other for five months) at the time of the operation. This interested us, since we had advised seven patients against becoming pregnant because of fear that severe dysfunction of the liver might occur. As a result of this advice two of the husbands had ligations of the ductus deferens and one patient had bilateral oophorectomy. It seemed necessary, therefore, to see what the results had been in other women in the childbearing period who became pregnant after having been operated on for stricture of the bile ducts.

Fifty-three patients qualified for study and 50 replied by May 26, 1959. The results are interesting. There were 19 deliveries in 14 patients, and all but one was a normal full-term spontaneous delivery. These patients were not in a selected group of those having good or excellent results from their operations for stricture; nine had reported either excellent or good results, two had fair, and three had poor results. All types of operations had been performed. Six patients had had hepaticoduodenostomy, two had choledochoduodenostomy, two had hepaticojejunostomy of the Roux-Y type, one had a double hepaticojejunostomy, one a double hepaticoduodenostomy, one a choledochocholedochostomy, and one a cholecystenterostomy. We have gone into detail regarding this group of cases because it seems to illustrate that there was no appreciable evidence of anastomotic dysfunction or disturbance of liver function during pregnancy and childbirth.

Fair	7	8
Poor	32	19

* Criteria for results are given in text.
† 217 operations.
‡ 91 operations.

Only one patient had any signs or symptoms of biliary obstruction which were not present before the pregnancy; these symptoms were mild abdominal pain during the last three months of pregnancy. Stools were colorless for a few days after the delivery, yet there were no subsequent symptoms and the patient has been in good health since. Patients who had fair or poor results before their pregnancies continued to have some symptoms of biliary obstruction but to no greater degree than they had been having before the pregnancies. Of further interest is that half these patients had a hepatitis of grade 3 or 4 at the time of operation on their bile ducts. The corollary of this is that patients operated on for stricture of the bile ducts have not been harmed by pregnancy—and normal deliveries of normal infants have occurred.

TABLE 2.—*Results of Various Operations for Stricture of Bile Ducts**

Operation and Follow-up Group, Yr.	Total Operations	Excellent or Good Results, %
Choledochocholedochostomy		
5 to 25	48	68

* Results of such miscellaneous operations as hepaticostomy, insertion of T tubes, and choledochojejunostomy are not included.

Results by Type of Operation

Results of operations for stricture were considered (1) excellent when the patient reported good health, with no chills, fever, or jaundice and no pain, or only occasional vague discomfort, seemingly not associated with the biliary tract; (2) good when the patient reported good health and one or more of the following symptoms only occasionally and in mild degree: fever, chills, pain, and slight or only questionable jaundice; (3) fair when the patient had more frequent attacks of biliary obstruction but was able to work; and (4) poor when one or more of the symptoms kept the patient from carrying on normal activities.

The number of anastomoses of the common or hepatic duct above the stricture to the duodenum was twice that of the ductal anastomoses (choledochocholedochostomy). The results of the various types of operations are shown in table 2. Briefly, in ductal anastomoses and when enough common or common hepatic duct was present to permit an accurate biliary-intestinal anastomosis (and they were mostly biliary-duodenal), excellent and good results were about 70% in the group with the 5-to-25-year follow-up and 82 to 88% in the group with the 1-to-5-year follow-up.

In 29 patients the stricture was so extensive that it was necessary to dissect out both hepatic ducts from the parenchyma of the liver; in 23 of these patients the ducts were anastomosed to the duodenum and in 6 to the jejunum. That these difficult procedures for extensive strictures of the bile ducts gave excellent or good results in almost the same percentage of cases as those in which the common or common hepatic ducts were anastomosed to the duodenum or jejunum emphasizes the fact that, no matter how extensive the stricture or how many previous operations the patient has had for its correction, if biliary obstruction has developed further operation should be undertaken, since an effectively functioning anastomosis may be possible between the hepatic ducts and the duodenum or jejunum. In the long-term follow-up group 26 patients had had four previous operations and 11 had had five to eight operations for the correction of the stricture previous to the time of the operation by one of us (W. W.).

TABLE 3.—*Late Deaths in Group Operated on for Biliary Stricture Prior to 1953*

Cause of Death	No. of Deaths	Condition of Liver at Operation	No. of Cases
Cirrhosis	7	Hepatitis and cirrhosis	6
Liver failure	9	Hepatitis, grade 3 or 4	4

Cardiac failure	2	Hepatitis, grade 3	1
		Cirrhosis	1
Carcinoma of lung	1	Normal liver	1
Carcinoma of uterus	1	Normal liver	1
Unknown	5	Hepatitis and cirrhosis	3
		Cirrhosis	1
		Normal liver	1
Total	28		

Mention should be made of the use of hepaticostomy, that is, the insertion of a catheter into a dilated intrahepatic duct near the hilus of the liver in which stricture of the extrahepatic ducts seems to be complete. Spontaneous fistulas between biliary tract and duodenum developed in 8 (67%) of the 12 patients treated by hepaticostomy. Two of the eight have had excellent results and one patient had a fair result after the development of the internal fistulas. As a result of relief of the biliary obstruction, the patients' conditions improved and the size of the liver decreased so that we were able, at a later operation, to make a biliary duodenal anastomosis in three of these remaining five patients, two of whom had excellent results and one a poor result.

In the series with the short-term follow-up, hepaticostomy was performed twice. One patient died within six months from hepatic failure, and one is living in good health five years after the operation and the development of an external biliary fistula.

The point to be emphasized is that, when a complete stricture of the extrahepatic ducts has occurred, a dilated intrahepatic duct can usually be found near the hilus of the liver by inserting an aspirating needle attached to a syringe. When the duct is found, an opening can be made into the intrahepatic duct by use of a small-bladed scalpel cutting into the liver along the course of the needle.

Many of the patients with good and excellent results have reported two or three episodes of cholangitis the first year after operation. These then disappeared. This is important because, if attacks continue or worsen, it means that obstruction of the anastomosis has occurred and further operations may be necessary to relieve it.

Prosthetic Splints.—Generally speaking, prosthetic splints used in the anastomoses were of two types. T tubes were used in duct-to-duct anastomoses as well as in biliary-intestinal anastomoses when the patient was deeply jaundiced and there was a good deal of bile pigment debris and stones within the intrahepatic duct. Use of T tubes permitted the washing out from time to time of any bile pigment debris or stones that might have accumulated in the radicles of the intrahepatic bile duct. In addition, such tubes gave immediate and certain relief of the biliary obstruction. The other most frequently used prosthetic device was a piece of catheter with two oversized catheter rings around it (the Mayo-Sullivan tube). This type of prosthesis was used more frequently than the T tube for hepatic duct-to-duodenal anastomoses (hepaticoduodenostomy), especially when there was but a fringe of duct left to anastomose. Almost equally good or excellent results followed its use when the common duct was anastomosed to the duodenum (choledochoduodenostomy) in the absence of intrahepatic stones or bile pigment debris.

Long-term results of double hepaticoduodenostomy (total of 17 cases) were excellent or good in five of the six cases (83%) in which Mayo-Sullivan tubes were used as the prostheses and in only five of eight cases (63%) in which T tubes were used. In nine cases in which biliary-duodenal anastomoses were made no prosthetic devices were used, and good or excellent results followed in seven cases (78%). Generally speaking, T tubes were kept in for six to nine months, while the Mayo-Sullivan tube remained for varying periods of weeks to months.

Effects of Cirrhosis of Liver and Hepatitis.—Twenty-eight deaths occurred during the follow-up period in the 5-to-25-year series; 16 were from cirrhosis or liver failure (table 3). Fourteen of these 16 patients had cirrhosis or hepatitis, grade 3 or 4, at the time of the operation. The remaining 12 deaths were due to causes unrelated to the operation: 2 from carcinoma (one of the lung and one of the uterus) and 5 from cardiovascular disease.

In the series with the short-term follow-up there were seven deaths. Five occurred immediately after operation; two of these five were due to liver failure, one to pulmonary embolus, and two to uncontrollable intestinal bleeding. Of the two deaths in the follow-up period, one occurred six months after operation from hepatic failure and the other, five years after operation from a cardiovascular accident.

Comment

This is a follow-up report of results of 308 operations for stricture of the bile ducts performed by one of us (W. W.) on 265 patients. Two series were studied: in the first the follow-up period was 5 to 25 years, and in the second it was 1 to 5 years. The purpose of the division into periods of time was not only to see what the long-term results were but to contrast the two groups.

In the long-term group 191 patients who had had 217 operations replied to the questionnaire and in the short-term group 74 patients who had had 91 operations were included. About 20% of the patients had had two or more operations for stricture performed by one of us.

Excellent and good results followed 61% of the 217 operations on patients having a 5-to-25-year follow-up and 73% of the 91 in the short-term group. Fair results were obtained in an additional 7 and 8% respectively.

The results from choledochocholedochostomy (duct-to-duct anastomosis) and from choledochoduodenostomy were practically the same in each series, with good or excellent results in 68 and 69% of cases, respectively, in the long-term group and in 88 and 82% in the short-term group. These procedures made up the major portion of the operations, although hepaticoduodenostomy, both single and double, with single or double hepaticojejunostomy was performed in appreciable numbers of cases with almost equally good results, even in the 29 cases in which it was necessary to dissect out both hepatic ducts from the liver parenchyma to anastomose them to the duodenum or jejunum. The best results in general followed the use of T tubes in duct-to-duct anastomoses and in choledochoduodenostomy or hepaticoduodenostomy when bile pigment, stones, and infection were present in the intrahepatic ducts. The Mayo-Sullivan tube gave the best results in hepaticointestinal anastomoses when intrahepatic infection or bile pigment did not complicate the stricture. This was particularly true when the common hepatic duct remnant was very short or where both hepatic ducts were anastomosed to the duodenum. T tubes were left in for six to nine months and the Mayo-Sullivan tubes from weeks to months. Fourteen women gave birth to 19 children normally without disturbances of the functioning of the anastomosis or the liver.

Many of the patients with good and excellent results have reported two or three episodes of cholangitis the first year after operation; these then ceased. This is important because if attacks continue or worsen it means obstruction of the anastomosis, and further operation is usually necessary.

It is of interest that stricture was due to surgical injury in all except one of the 191 patients studied in the long-term group and in all of the patients in the short-term group. In the one exception it was due to external trauma to the abdomen. Late deaths were due largely to severe cirrhosis with and without hepatitis present at the time of operation or to unrelated causes, such as cardiovascular lesions.

This study has brought out several points that are worth emphasis:

1. Regardless of the number of previous attempts to repair the stricture, no patient should be denied operation unless evidence of hepatic insufficiency, characterized by ascites with a long history of deep jaundice, is present.
2. Cirrhosis of the liver is not a contraindication to operation unless hepatic insufficiency with ascites is present. It increases the risk, however, and makes the operation more difficult because of the collateral circulation, and the end-results are not nearly so good.
3. Even though one surgeon may report that no duct is present outside of the liver, this does not mean that another surgeon of greater experience may not find enough duct, or dissect out enough at the hilus of the liver, to enable him to restore biliary-intestinal continuity. Furthermore, even when no extrahepatic duct is found, relief of the biliary obstruction by insertion of a drainage catheter into a dilated intrahepatic duct may cause a sufficient decrease in the size of the liver so that an accurate biliary-intestinal anastomosis can be made at a second operation or a spontaneous biliary intestinal fistula may result.
4. Usually more of the duct at the upper end is uninvolved in the stricture than appears evident at first because of the overlying hepatic tissue. Thus, if the duct is found, it can be grasped at its open end with Allis forceps and dissected from the overlying hepatic tissue or from the tissue surrounding it at the hilus.
5. The intrahepatic ducts should be searched for stones with the exploring scoops, for such stones are a frequent accompaniment of strictures of the common duct.
6. Before making a duct-to-duct anastomosis, the surgeon must be sure that the ampulla is free of stones and that the continuity between the hepatic and common ducts and the duodenum is not impaired.
7. The proper length of time for the prosthetic splint to remain in the anastomosis to prevent constriction is still being investigated.

HERPES ZOSTER IN CHILDREN

Richard K. Winkelmann, M.D.
and
Harold O. Perry, M.D., Rochester, Minn.

Herpes zoster, erroneously considered a rare disease in children, is fairly common but often unrecognized because it produces little reaction in the pediatric patient. Clinical observations of seven children with this illness are presented. None of the children had been exposed to the herpes zoster virus before the onset of illness. Five had had chickenpox (immunologically related to herpes zoster) during the first year of life. The vesiculobullous lesion occurring in the children's skin had the appearance and herpetiform grouping typical of lesions in the adult. Complications of the disease were like those in the adult except that postherpetic neuralgia did not occur. Neither the illness nor its complications are usually severe in this age group. The youngster requires only supportive care and, occasionally, specific attention to the skin lesions.

Herpes zoster is a vesiculobullous eruption of the skin secondary to involvement of sensory ganglions and nerves by the varicella-zoster virus. Almost all recorded experience with this problem concerns adult patients who have had varicella at some time during their life. This is one reason that herpes zoster has been considered as an immunologically modified form of varicella (chickenpox).

Comby[1] reported in 1922 on 84 personal cases collected during 40 years of interest in the problem of zona (herpes zoster) in children. Only 20 of his patients were under 5 years of age, but the number of observations that he made indicates that the available statistics do not present a complete picture. In his experience, the sex distribution was about equal. He was of the opinion that these patients were rarely in good health, and he thought that tuberculosis predisposed to the development of herpes zoster. The eruption consisted of painless vesiculobullous lesions evolving rapidly and healing without complication, as compared to the lesions in adults. No other experience reported in the literature is so extensive.

This disease has been considered such a rarity that individual case reports in children, such as that of Madden,[2] have been significant. A truly rare occurrence is herpes zoster neonatorum, of which 10 cases have been reported. The latest, reported by Feldman,[3] occurred in only one of a set of twins. The mother had not had a recognizable infection. The obstetrician who delivered the children and the bacteriologist who handled the material had herpes zoster 14 and 15 days, respectively, after contact.

We have observed seven cases of herpes zoster in young children in the past three years at the Mayo Clinic and believe that it must be more common than written medical experience would indicate. We present the following case reports to emphasize those special clinical features which characterize herpes zoster in the child and to indicate how this condition may be best diagnosed and treated. Some of the data in these seven cases are summarized in the accompanying table.

Report of Cases

CASE 1.—A 7-month-old boy, the result of a normal pregnancy and delivery, had a three-day history of a papulovesicular rash on the upper part of the right arm. Subsequently, new vesicles on an erythematous base appeared, grouped in plaques along the arm and over the central portion of the back (fig. 1). The child apparently was not distressed by the eruption. No scratching, crying, or disturbance of normal function was noted. The child had not been taking any medicaments and had been essentially well except for mild coryza before the rash appeared. No prior history of childhood diseases was elicited. Vaccination against diphtheria, pertussis, and tetanus (DPT) had been completed two months before. Smears from the floor of the bullae revealed giant balloon cells (fig. 2). All residuals had healed in one month.

CASE 2.—A 2-year-old boy was brought to the clinic because of a vesicular eruption of the right scapular and axillary region of four days' duration. The patient complained of mild pruritus of the area but no pain. He had been somewhat restless during the night. Grouped vesicles on erythematous, edematous bases were present in a unilateral distribution along the right upper part of the back. A few vesicles were noted lower on the back. This patient had had mild varicella at the age of 2 months, when his sister, at that time 3 years of age, had also had the disease. The patient had been exposed recently to a person who had varicella. With topical therapy the lesions underwent involution in three weeks.

From the Section of Dermatology, Mayo Clinic and Mayo Foundation. The Mayo Foundation is a part of the Graduate School of the University of Minnesota.

Read before the Section on Dermatology at the 108th Annual Meeting of the American Medical Association, Atlantic City, June 10, 1959.

Case 3.—A 2½-year-old girl had an eruption of three days' duration on the left thigh that spread to involve the buttocks. Examination disclosed a vesicular papular eruption on the lateral aspect of the left buttock and thigh and the medial aspect of the left thigh, with a considerable amount of underlying induration. Her rectal temperature was 100 F (37.8 C). The diagnosis of herpes zoster was concurred in by the pediatrician and the dermatologist. Two days later a generalized eruption of single discrete vesicles developed over the face, back, and trunk, with a total of 30 to 35 lesions. Within two weeks this eruption had almost disappeared. She had been exposed to varicella one month and again two weeks prior to the development of the eruption. The child had had varicella at the age of 2 months, when three other siblings had had the disease.

Data in Seven Cases of Herpes Zoster in Children

Age, Yr.	Sex	Primary Location of Lesions	Duration of Lesions, Wk.	Pain	Sequelae	Age at Previous Varicella	Known Exposure to Varicella*
7/12	M	Right arm and shoulder	4	0	None	None	No
2	M	Right shoulder and axilla	3	0	None	2 mo.	Yes
2½	F	Left thigh, buttocks	3	0	Generalized herpes	2 mo.	Yes
2½	M	Right lumbar and inguinal region	4	+	Cutaneous scars	1 yr.	No
4	M	Left thorax	2	0	None	2 yr.	Yes
4	M	Right thigh, leg, and hip	3	+	Meningitic reaction	3 mo.	No
5	M	Left leg and thigh	2	+	Generalized herpes	8 mo.	No

* None of the patients was known to have been exposed to herpes zoster.

Case 4.—A 2½-year-old boy had a one-week history of pain in the surface tissues of the right lumbar region, extending anteriorly to the right lower quadrant of the abdomen and the inguinal zone. This had been followed by a grouped vesicular eruption on an erythematous base. One zone of superficial necrosis of the skin was present over the lumbar region. The patient was the result of a normal pregnancy and had completed his DPT and smallpox vaccinations two years before. He had experienced a nonspecific dermatitis two years previously which disappeared without therapy. He had had varicella at the age of one year. Balloon cells were found on smears made from the current lesions. The lesions underwent involution in three weeks after the local application of an antibiotic cream. Permanent scarring occurred.

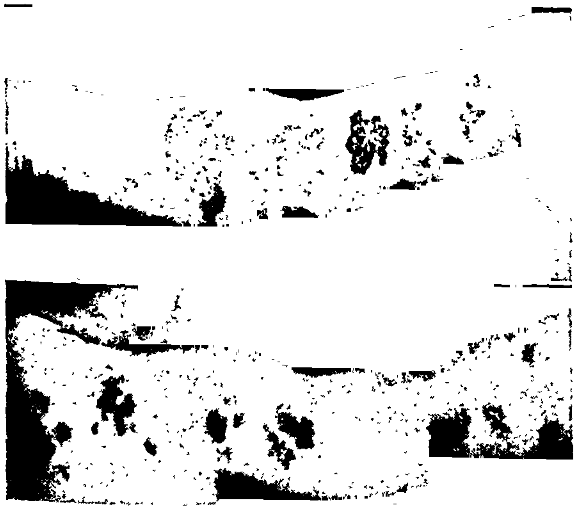

Fig. 1 (case 1).—Eruption of grouped vesicles on urticarial base on arm and shoulder.

Case 5.—A 4-year-old boy had a one-week history of an asymptomatic papulovesicular eruption on the left side of the thorax. Lesions had continued to develop during the week. At the time of examination only crusted dry papules were present in a band on the right side of the thorax laterally and anteriorly. The only treatment had been with the use of baby oil. The lesions resolved with local therapy in two weeks. The child had had varicella at the age of 2 years.

Case 6.—A 4-year-old boy had pain in the superficial tissues of the medial aspect of the right thigh for four days. This was followed by the onset of a vesicular eruption, which spread in two days to involve the anterior and lateral aspects of the thigh (fig. 3*a*). Local treatment with hydrocortisone and antibiotic medication were without effect. Twenty-four hours prior to admission the pain suddenly became severe, and grouped vesicular lesions were noted over the sacral region and right hip (fig. 3*b*). The patient had had varicella at the age of 3

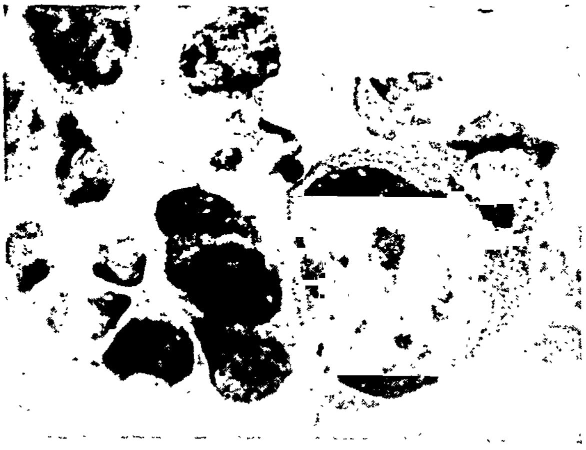

Fig. 2 (case 1).—Giant balloon cell in smear of material from floor of bullae in herpes zoster (Wright's stain; × 960).

months, when one sibling had had the disease. Another sibling had died of asthma at the age of 5 months. A sister, 13 years of age, had had rheumatic fever.

Examination disclosed a rectal temperature of 103 F (39.4 C). The patient complained of frontal headache. Moderate stiffness of the neck and pain on flexion were present. A questionable Kernig's sign was noted. The rest of the examination gave normal results. The cerebrospinal fluid contained 60 mg. of sugar, 667 mg. of chloride, and 30 mg. of protein per 100 ml.; it also contained 170 lymphocytes per cubic millimeter. Bacteria were not found. The pain subsided promptly after application of wet dressings to the affected regions. The neurologist and the pediatrician agreed that the patient had a meningitic reaction to generalized herpes zoster. Two days later the patient was afebrile, and all evidence of nuchal rigidity and meningeal irritation had disappeared. Five days later the temperature was still normal, the patient was comfortable, and the lesions were undergoing involution asymptomatically. Healing was complete in three weeks.

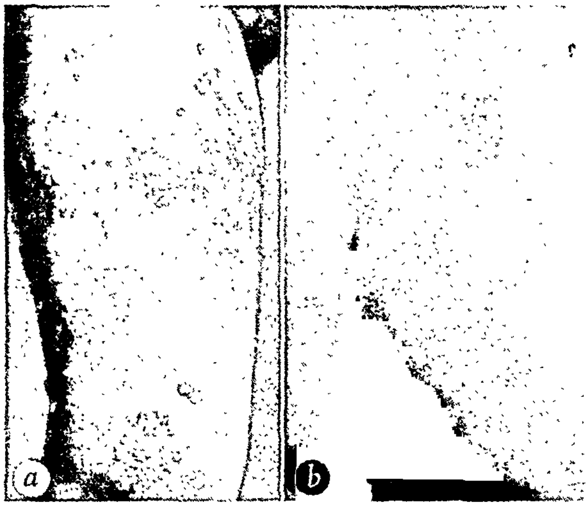

Fig. 3 (case 6).—*a*, Characteristic zoster eruption of right thigh; *b*, grouped vesicles of sacral region.

Case 7.—A 5-year-old boy had been well until four days prior to observation. At that time, he complained of aching in the muscles of the left thigh. Restlessness was noted, particularly during the night. One day prior to admission a papular eruption developed about the head, body, and left leg. Increased restlessness and an increase in the rectal temperature from 99 to 100 F (37.2 to 37.8 C) occurred 24 hours prior to admission.

When examined the child held his left leg partially flexed at the hip and knee, and he resisted examination of that part. Clusters of erythematous papules surmounted by small vesicles were present over the left thigh and extended down to involve the great toe. Isolated lesions were noted about the trunk and behind the ears. A clinical diagnosis of herpes zoster was made. A direct smear of cells from the base of the vesicles showed balloon cells. Blister fluid taken from a lesion on the foot was inoculated into a rabbit's cornea, with negative results.

Elevation of the extremities and use of soothing wet dressings gave good symptomatic relief. When the patient was seen approximately a week later, the pain had decreased remarkably and the child again was using his foot. There was beginning involution of the vesicles. Four days later all previous zones of vesiculation were healing, and the patient was active. This patient had had varicella at 8 months of age, but relatively few lesions had been noted. He had not had any recent known contact with children who had varicella.

Comment

Our recent experience belies the impression given by recorded medical literature. Herpes zoster is an infrequent, but not a rare, disease of children. Its infrequent recognition could be explained by its benign clinical course. For this reason, patients so affected may never reach the physician. Because of a low index of suspicion, the eruption is often treated casually as a local cutaneous problem, and its actual nature remains unrecognized.

The cutaneous eruption is comparable to that in the adult. In our experience, the most frequent sites of involvement are the trunk and proximal portion of the extremities. A herpetiform grouping of vesiculobullous lesions, occasionally on an urticarial base, is the most suggestive diagnostic feature. A rapid response to local treatment is typical. In the patient in case 4 the eruption proceeded to gangrene of the skin, after which the area healed, with permanent scarring. Herpes generalisatus occurred in two of our cases, indicating that surface dissemination of the virus may be expected in young patients who have herpes zoster. While the individual lesions were those of varicella, the small number of vesicles, their distribution, and the related clinical course served to separate these clinical entities.

Pain in the cutaneous eruption does occur in children, although typically it is not present. Painful bullae were present in three of our patients, the pain being severe enough to interfere with the normal function of the involved part. Case 7 is an example in which the child would not use the leg but maintained it in flexion; after only a week of local treatment the part was restored to function. Pruritus is rare.

Enlargement of the regional lymph nodes is a consistently associated clinical feature. These nodes usually are freely movable and nontender. Moderate increases in temperature are noted with the more severe degrees of cutaneous involvement. Malaise is present, and one sign most parents recognize is unusual irritability. These associated features were generally present in our patients who had more than the average cutaneous involvement.

The course of herpes zoster in children is uniformly uneventful and extremely short. The clinical problem lasted from two to four weeks in our patients. In adults, the state lasts twice as long and is almost always associated with pain; the complications are more severe.

All the complications of adult herpes zoster may be observed in children under 10 years of age. While it is important to recognize that complications are the rule with increasing age, even the complications in children are benign. The child with severe herpes zoster usually has only an extra week of difficulty.

The cutaneous complications of herpes generalisatus and cutaneous gangrene have been mentioned. The most frequent complication of herpes zoster in the mature patient is postherpetic neuralgia. This is not seen in children. We have not been able to find any authentic case of intractable pain in children. Our patients with painful bullae responded in 24 hours to local treatment. The status in the adult is quite different, and colleagues[4] have shown a great increase in the incidence of postherpetic neuralgia with age, the highest incidence being found in the sixth decade of life. The incidence of complicating persistent pain is high in trigeminal zoster, compared to that involving other nerves.

Some of the so-called complications of herpes zoster represent clinical types of the disease that arise solely as a result of involvement of a specific nerve. The Ramsay Hunt syndrome, due to involvement of the eighth cranial nerve, has been reported in a child.[5] Facial paralysis has been reported by O'Neill,[6] and paralysis of other cranial nerves has been noted by Schmidt and associates.[7] Ophthalmic zoster has been reported more often than involvement of other specific nerves.[8] The rule of Hutchinson, which states that the eye is not involved unless the nasociliary branch of the ophthalmic nerve is affected, holds for children as it does for adults. Severe ocular involvement and blindness are reported only rarely.[9] Muscular paralysis of the eye is said to occur in 7% of cases.[10] We agree with Björk,[8] who said that ocular complications are less frequent in children than they are in adults, and we disagree with Bruce,[10] who stated that ocular complications occur in 50% of cases.

The occurrence of mild meningitic symptoms and pleocytosis, as in the patient in case 6, should not be unexpected.[11] Such a reaction is a complication of many viral diseases in childhood. Schmidt and associates[7] recorded such a case. They also noted cranial nerve involvement, with facial and lingual paresis. The facial weakness persisted for six weeks. Slow-wave changes were seen in the electroencephalogram at the time of the meningitic reaction; two weeks later the recording was essentially normal. A similar simple course was followed by the patient in case 6.

Associated diseases are not found in children. Contrary to the aforementioned statement of Comby that tuberculosis predisposes to the disease and that his patients were rarely in good health, our patients were all in general good health; this agrees with most of the recent authors. Of the 957 patients reported on by de Moragas and Kierland[4] 33 had lymphoma, the most frequently associated disease.

The patients in our cases represented each 12-month period between birth and 5 years of age. Of the seven, five had had varicella by the age of one year. Only one had not had varicella, and this was the 7-month-old child in case 1. It was difficult to obtain a history of exposure to the virus before the onset of the clinical findings; only three of the parents could remember such exposure.

These data emphasize that the relationship between varicella and subsequent herpes zoster is maintained even in childhood. The one exception to this in our group of seven patients was the 7-month-old baby, who might be expected still to have some maternal immunity. No real argument exists today as to the relationship between varicella and herpes zoster. It is unnecessary to postulate the presence of *de novo* herpes zoster to explain the present relationships.

The diagnosis of herpes zoster is principally a clinical one. The association of a typical eruption and course is usually adequate to establish the diagnosis. Balloon cells containing masses of degenerating desoxyribonucleic acid, as shown in figure 2, may be demonstrated in smears stained with Wright's stain, as outlined by Blank and Rake.[12] Study of such smears is a useful office procedure that separates the viral diseases from contact dermatitis and drug eruptions in a simple manner. Further confirmation of the diagnosis may be obtained by cutaneous biopsy, which demonstrates intranuclear acidophilic inclusions. Positive results of the Paul test rule out the varicella-zoster virus. Positive results from injection of vesicle fluid into suckling mice also rule out the varicella-zoster virus.

Treatment for herpes zoster in children is necessary only for the skin. The continuous application of dressings wet with a 0.25% solution of aluminum subacetate, with changes every two to three hours, for 24 to 48 hours will relieve symptoms and dry the vesicles or bullae. If the lesions are asymptomatic a simple lotion, such as starch calamine, may be used. If secondary infection occurs, application of wet dressings or a local antibiotic in a water-soluble ointment or both is satisfactory. Analgesic medicaments usually are not required, since adequate local treatment of the skin will relieve the symptoms. Roentgenologic therapy should not be considered in treating herpes zoster in children.

Summary

Herpes zoster was seen in seven children at the Mayo Clinic; it may be encountered frequently. In children it is a milder disease than it is in adults; it may be asymptomatic but may be recognized by its herpetiform distribution. Balloon cells can be demonstrated easily in the vesicle fluid. With the exception of postherpetic neuralgia all complications of herpes zoster in adults have been observed in children with this disease. Local treatment of the skin is sufficient.

EARLY DIAGNOSIS OF MULTIPLE PREGNANCY

USE OF ELECTROENCEPHALOGRAPH IN PRENATAL EXAMINATION

Lieut. Charles A. Novotny (MC), U. S. Navy, Lieut. William K. Hass (MC), U. S. Naval Reserve
and
Capt. Dwight A. Callagan (MC), U. S. Navy

Previous reports of the possibility of using the electroencephalograph for the diagnosis of multiple pregnancies were confirmed in a study of 321 tracings obtained from 295 patients by means of an eight-channel instrument. The stage of pregnancy was an important factor in determining the success of the procedure; in the most favorable period, from the 20th through the 27th week of gestation, the diagnosis of multiple gestations was made without a single error. The earliest positive diagnosis of twins was made at 16 weeks, and an accurate diagnosis of triplets at 20 weeks. Early recognition of multiple pregnancies is important. The convenience and safety of the electroencephalograph make it desirable that this instrument be used more widely for this purpose in obstetrics.

A safe, reliable, and practical method of early diagnosis of twins is basic to our established program of special management designed to avoid the high perinatal mortality commonly associated with multiple gestations. The increasing availability and efficiency of the electroencephalograph prompted us to explore its use in the identification of fetal cardiac activity and the diagnosis of multiple gestations. This report assesses the value of this instrument in the early diagnosis of multiple gestations. Since this study is based on a relatively large group of patients, it offers the further opportunity to define the limits of the technique when applied as a routine part of a prenatal examination.

The electrical activity of the fetal heart has been the subject of sporadic laboratory studies since 1906.[1] Identification of twin QRS complexes was first reported in 1938.[2] The first series (46 tracings) in which the electroencephalograph was used was

---

Read in part before the meeting of the American College of Obstetricians and Gynecologists, Atlantic City, April 8, 1959.

reported in 1942.[3] Blondheim,[4] who reported the second series of cases, stated, however, that Lindsley[5] was the first to use this instrument. In 1955 Bernstine and Borkowski[6] reviewed the literature up to that time and performed a third series with the electroencephalograph. Skemp and Millen[7] added another small series in 1958.

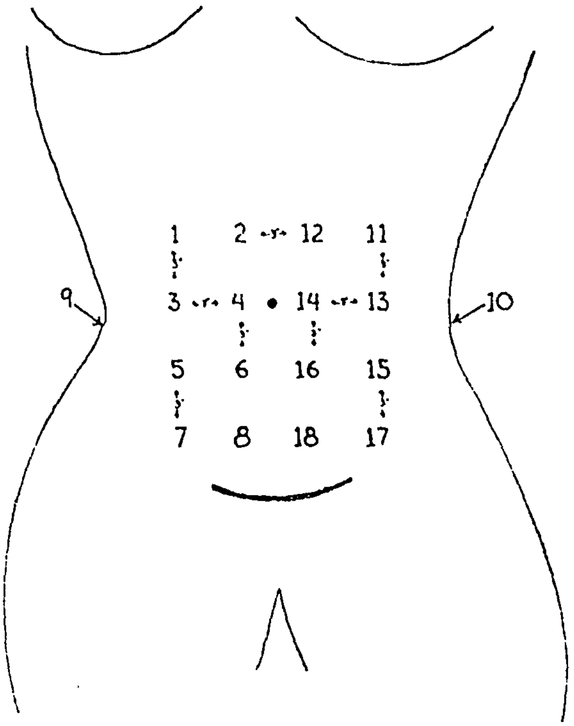

Fig. 1.—Electrode placements in determination of fetal heart activity by means of electroencephalograph.

Although several investigators have reported attempts to record all of the electrical components of fetal heart activity, we have made no attempt to obtain or identify P or T waves nor have we attempted to use the electroencephalograph to diagnose fetal distress. We have used it solely to determine the presence or absence of fetal heart activity and thereby establish the existence of fetal life and the number of fetuses present.

Method

A standard eight-channel Grass model III electroencephalograph was used throughout. This machine is calibrated to yield a 10-mm. deflection per 50-mv. input. Amplification is varied from time to time at the discretion of the technician, usually when the maternal QRS amplitude is too great or fetal deflection is too small. The electrodes are of the silver-disk variety applied to the abdomen with standard bentonite paste (fig. 1). Electrodes 9 and 10 are applied to the right and left flanks in the posterior axillary lines just below the umbilicus. Once the electrodes are applied, multiple combinations are made available by a simple dial adjustment at the main control panel. This permits a systematic search for the fetal heart which is both rapid and efficient. The usual search pattern of leads is conducted according to the following pattern:

1-9	2-9	8-2	1-3	2-4	5-3	5-3	7-5
3-9	4-9	18-12	3-5	4-6	3-4	3-6	5-6
5-9	6-9	8-12	5-7	6-8	4-5	6-5	6-7
7-9	8-9	18-2	11-13	12-14	15-13	15-13	17-15
11-10	12-10		13-15	14-16	13-14	13-16	15-16
13-10	14-10		15-17	16-18	14-15	16-15	16-17
15-10	16-10						
17-10	18-10						

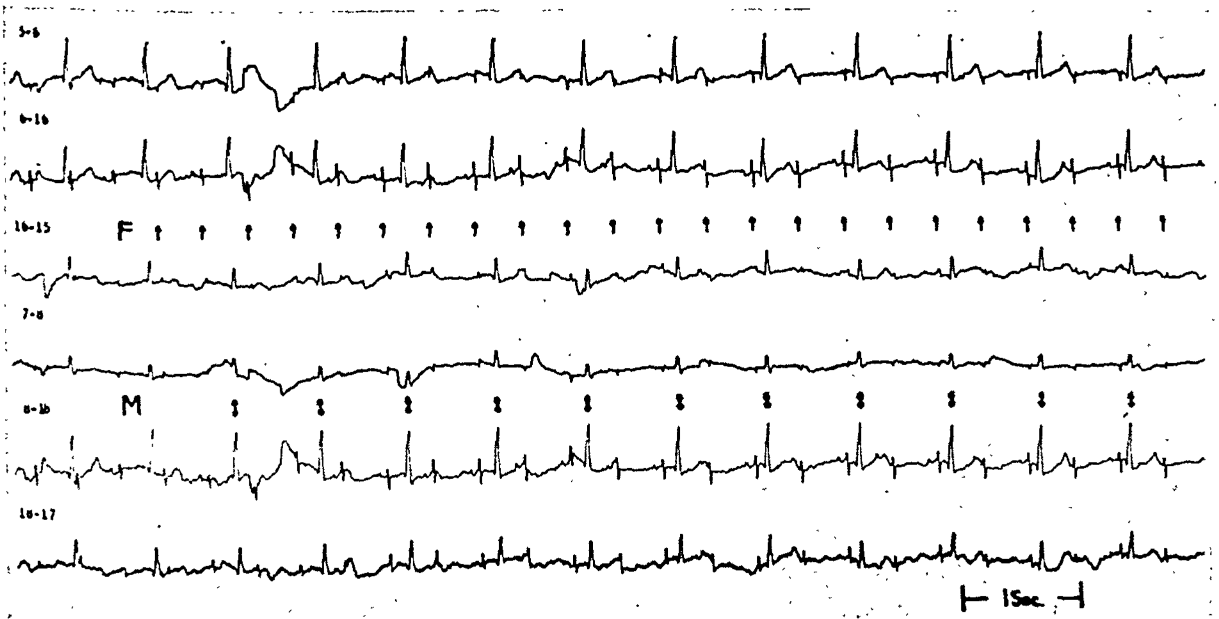

Fig. 2.—Typical electrocardiographic tracing: fetal complexes (F) and maternal complexes (M) identified with arrows.

By this technique fetal QRS complexes are found in some records over a wide area and in others under only one or two electrodes. Leads placed on the back rarely revealed a fetal QRS complex and never disclosed one when the result of an abdominal survey was negative. Hyperventilation for two minutes, in some patients, will help to increase the amplitude of the fetal QRS deflection. Paper speed used is 30 mm. per second.

The criteria employed in the identification of fetal QRS complexes are as follows: (1) a regular rhythm whose rate varies but little within any 10-second period, (2) a uniform appearance of the fetal QRS complexes (fig. 2), and (3) a relatively slower duration of the fetal QRS complex when compared to the sometimes confusing muscle artifact (fig. 3).

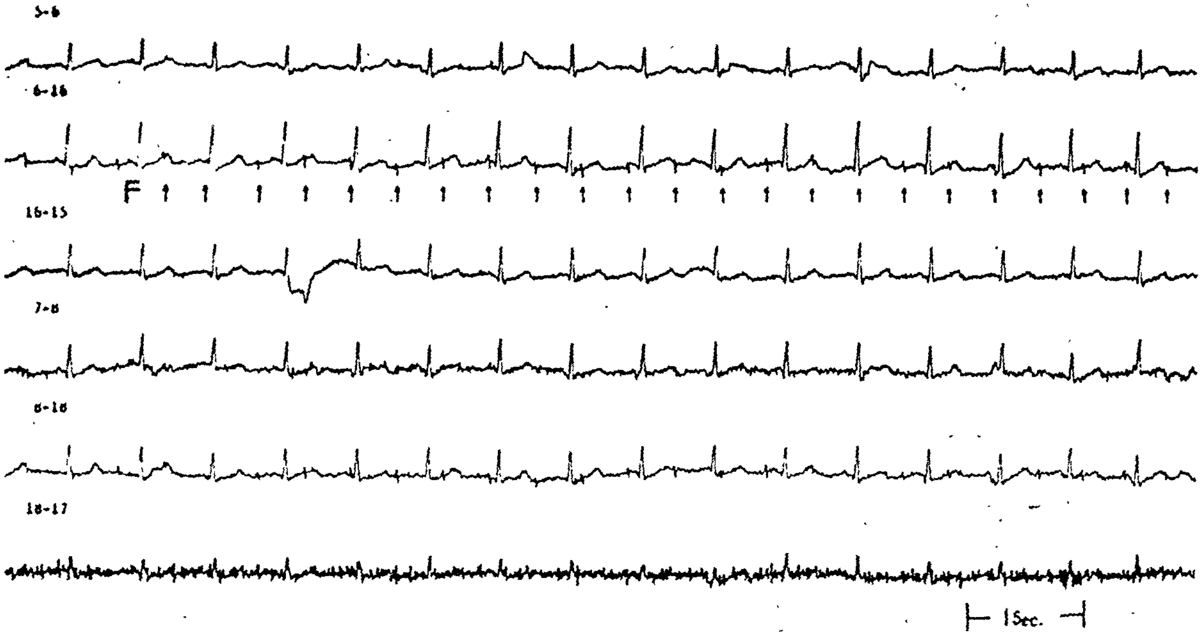

Fig. 3.—Muscle artifact and background "noise" with fetal QRS (F) readily differentiated by criteria given in text.

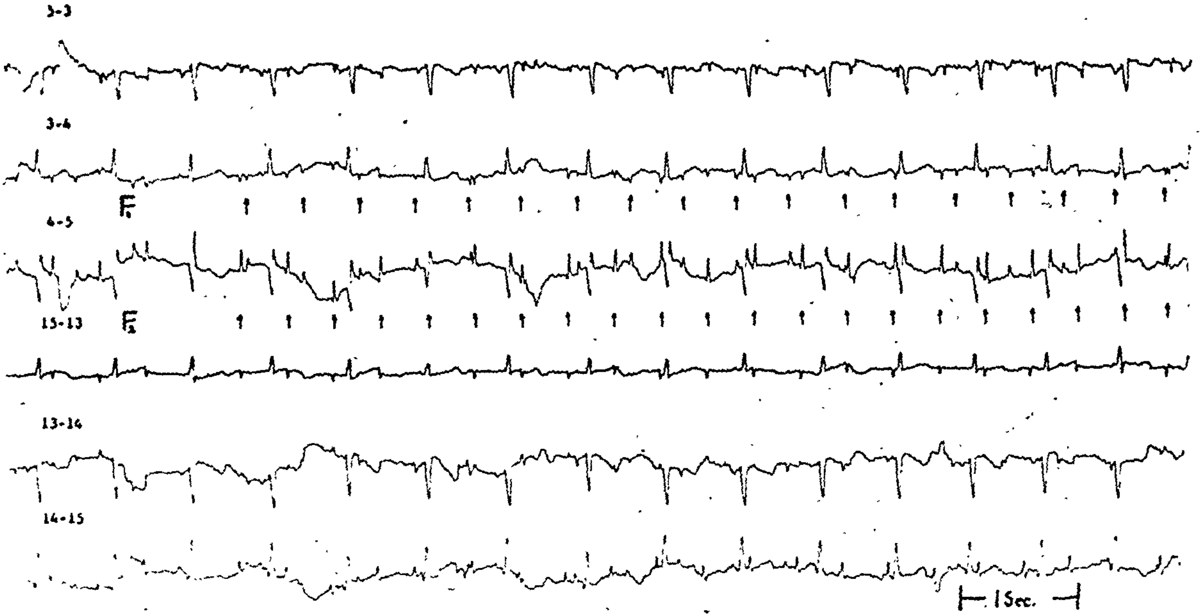

Fig. 4.—Typical appearance of tracings of twin fetal hearts (F1,F2).

Twin complexes share the above criteria for identification. Invariably the fetal heart rates are slightly different, causing their respective QRS complexes to part and meet in a given lead or leads. Further, these complexes rarely have the same configuration due to differences in electrical axes determined by the respective intrauterine positions of the fetuses. A breech presentation is diagnosed when the fetal QRS has the same polarity as the maternal QRS in the tracing from lead 8-2. A vertex presentation is diagnosed when the fetal QRS deflection takes the opposite direction in this lead (fig. 4 and 5).

Results

Three hundred twenty-one tracings were obtained from 295 patients during the period from the 11th to the 40th week of gestation. Twenty tracings were technically unsatisfactory for interpretation. Thirty-eight others failed, for various reasons, to demonstrate fetal heart activity or revealed only one fetal heart when two or more should have been present. All other tracings revealed the appropriate number of fetal QRS complexes or no activity where fetal death had occurred. The period of gestation from the 28th through 35th week proved to be the most difficult time to demonstrate electrical evidence of fetal heart activity, while excellent results were achieved from the 20th to the 27th week. Interpretation of the records occasionally was made difficult by the presence of (1) excessive maternal muscle artifact, (2) excessive fetal activity, (3) poor patient cooperation, (4) failure to empty the maternal bladder, and (5) marked maternal tachycardia. Analysis of our present material has shown that height, weight, age, race, or parity of the patient did not influence the accuracy of diagnosis.

In spite of the above-mentioned difficulties and the random selection of patients for testing between the 11th and 40th week, we have been able to make an accurate diagnosis in 81% of all tracings. Ninety per cent accuracy was found in tracings taken between the 20th and 27th week. Patients with twin gestations were encountered 21 times. One hundred per cent accuracy of diagnosis of multiple gestations was found in the most favorable period, the 20th through 27th week. The earliest positive twin

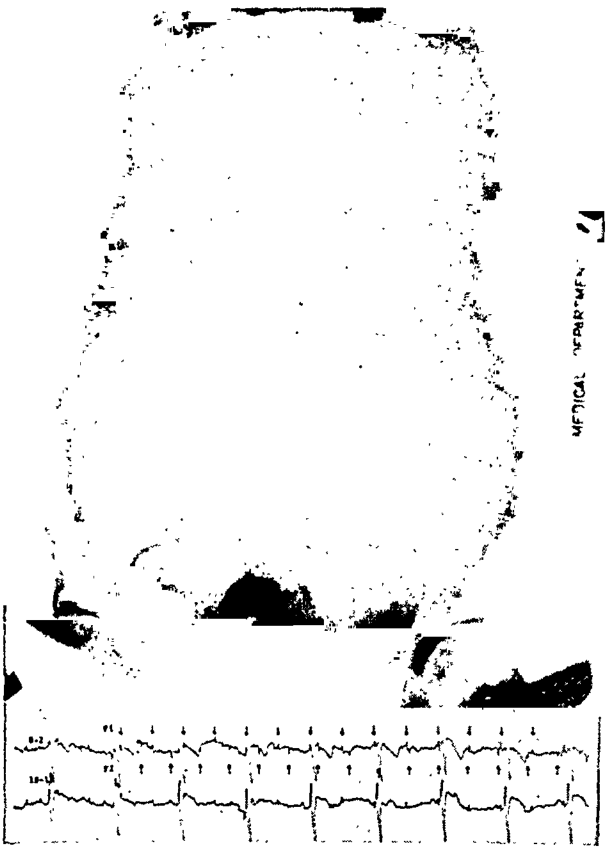

Fig. 5.—Roentgenogram taken within 10 minutes after diagnosis of twins by EEG. Confirmation of presentations diagnosed from electrical tracings.

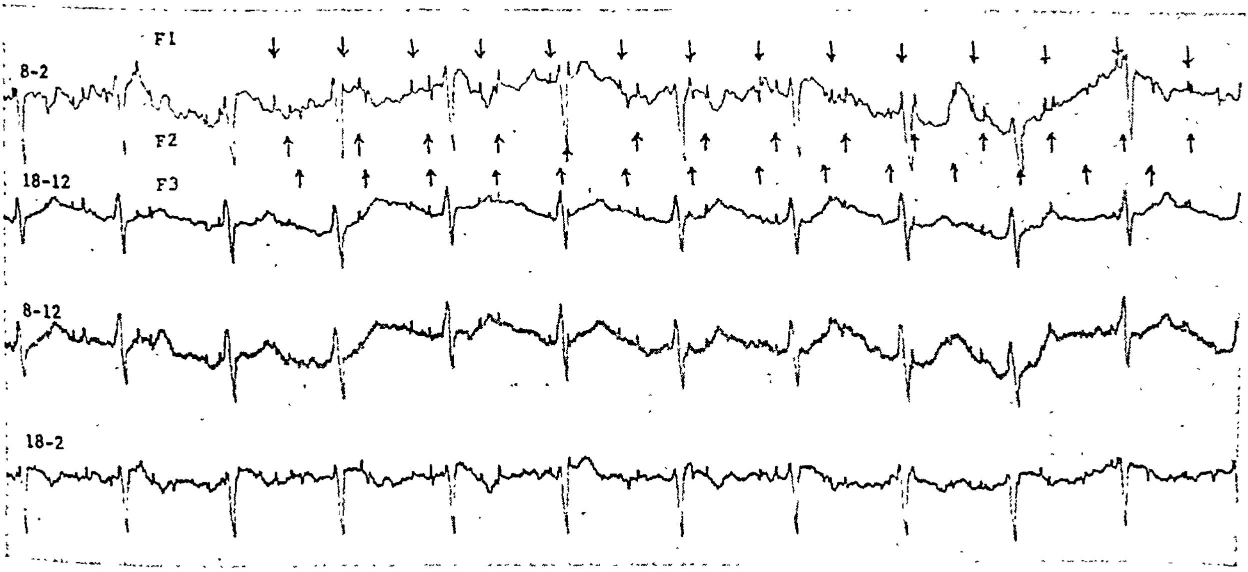

Fig. 6.—Tracing establishing diagnosis of triplets at 20 weeks gestation. Tracing taken two weeks earlier was definite for twins but with suspicion of presence of third fetus. Roentgenogram taken four weeks after electrical diagnosis was inconclusive in making this diagnosis of triplets.

diagnosis was made at 16 weeks. The accurate diagnosis of triplets was easily made at 20 weeks gestation by this method (fig. 6). It was of interest that a single roentgenogram of this patient, taken four weeks later, still was inconclusive for triplets.

Comment

The increase in complications associated with multiple gestation, the desire for early diagnosis, as well as the growing concern for irradiation hazards[8] and our resultant desire to avoid the use of roentgenograms have prompted this investigation. The presence of single or multiple fetal hearts was diagnosed by means of the Grass electroencephalograph. Three hundred twenty-one tracings were obtained from 295 patients. We found that it is possible to make an accurate diagnosis of single or multiple pregnancies or to support the occurrence of fetal death in the vast majority of all patients studied. Ninety per cent accuracy of diagnosis was achieved between the 20th and 27th weeks, the most favorable period for application of this test. One hundred per cent accuracy of diagnosis of multiple gestations was obtained from the 20th through the 27th week of gestation. The test is easily performed by a technician trained in electroencephalography and, as used here, does not require the presence of a physician during the recording. Because of its ease of application, its accuracy and safety, as well as its overwhelming acceptance by patients, the U. S. Naval Hospital, Portsmouth, Va., now employs this test as part of the prenatal routine in all cases of suspected multiple gestation or of intrauterine fetal death.

The opinions expressed in this article are those of the authors and not necessarily those of the Department of the Navy or Department of Defense.

SURGICAL INDICATIONS IN NONTOXIC NODULAR GOITER.—An analysis of a series of 4,885 private patients, not influenced by institutional selection, is analyzed in an attempt to establish a true cross section of the rapidly changing goiter problem in the Great Lakes' goiter belt. We may be experiencing the passing of an endemic goiter area. Until the early 1940s, the dominating indication for surgery was toxic goiter; only about 12% of thyroidectomies were done for nontoxic nodular goiter. From 1950 to 1958, about 73% of the goiters operated upon were classified as nontoxic types. In our experience, since there is an 11% incidence of cancer in nontoxic nodular goiter, and since the medical literature records an incidence varying from 5% to 30%, the problem becomes disturbing. We are confronted with two schools of thought in the management of nontoxic nodular goiter. (1) Thyroidectomy in all cases. (2) Selection of cases. There is general agreement that large nodular goiters should be removed because of pressure symptoms and for cosmetic reasons. It is also generally agreed that the high incidence of papillary and follicular cancer in asymptomatic nodular goiter in children under the age of 15 years demands thyroidectomy. Routine thyroidectomy in nodular goiter in adults in an endemic goiter area, however, would lead to many unnecessary operations. Cancer of the thyroid is a relatively rare disease. Only 0.5% of deaths from all cancer results from cancer of the thyroid. . . . Furthermore, in this area about 2% of the male and 6% of the female population have asymptomatic nodular goiters. These observations favor selection of cases for operation based on the appearance of a solitary nodule, a rapid lobular increase in size of a goiter, hard irregular nodules, palpable cervical lymph nodes, and any other suspicious changes in the gland.—C. W. Eberbach, M.D., Surgical Indications in Nontoxic Nodular Goiter: A Controversial Problem, *The Wisconsin Medical Journal*, April, 1959.

CLINICAL NOTES

LATEX-AGGLUTINATION SEROLOGIC TEST FOR TRICHINOSIS

PRELIMINARY REPORT

Filomena Innella, B.A., New York
and
Major Wallace J. Redner (MC), U. S. Army

The complement-fixation test has been in routine use in the First U. S. Army Medical Laboratory for the diagnosis of trichinosis. On occasion the bentonite-flocculation test has also been performed. Recently we have developed an agglutination procedure with latex (polystyrene) particles which promises to be as specific and sensitive, but less laborious, than either the complement-fixation [1] or the bentonite [2] test. The latex test is performed in small volumes in order to conserve reagents and test serum and, because of its simplicity, may be adapted for use in any laboratory. Results obtained in parallel tests with the complement-fixation and latex methods are presented in this report.

Materials and Method

Preparation of Trichinella Extract.—Trichinella (Trichina) extract is prepared by the method of Bozicevich.[2] It is carefully titrated with a number of serums from patients known to have trichinosis. Lack of nonspecific and anticomplementary activity is assessed by testing serum from normal persons and patients with diagnoses of syphilis, Echinococcus disease, tuberculosis, leptospirosis, and rheumatoid arthritis. The extract is freeze-dried in individual vials, in volumes sufficient for one day's tests. The dried extract used for this study has been stored for a period of three years, with no loss of activity.

Complement-Fixation Test for Trichinosis.—The complement-fixation test for trichinosis is a modification [3] of the Kolmer complement-fixation test.[4] Antisheep amboceptor and guinea pig complement, either prepared in this laboratory or obtained commercially, are titrated for a 100% unit of hemolysis, with 2% sheep cell suspension, in a total volume of 0.54 ml. The same total volume is used for the test: 0.04 ml. of serum, 0.1 ml. of antigen extract, and 0.2 ml. of complement. After overnight refrigerator incubation, the test is completed at 37 C by addition of 0.2 ml. of sensitized cells, consisting of one part of amboceptor and one part of 2% sheep cell suspension. Readings are made according to standard methods, by recording 4+ for complete lack of hemolysis, with gradations of 3+, 2+, 1+, and ±, depending on the degree of hemolysis.

Trichinella Latex Particle–Agglutination Test.—Essentially, the Trichinella latex particle–agglutination test is a modification of the diagnostic procedure of Singer and Plotz [5] for rheumatoid arthritis. A stock suspension of latex particles (0.81 μ in size) is prepared in distilled water and then added to Trichinella extract and glycine saline buffer solution; the quantities are as follows: Trichinella extract, 1.0 ml.; saline glycine buffer solution (pH 8.2), 4.0 ml.; and stock solution of latex particles, 0.2 ml. This volume is sufficient for 50 tests. The test is performed in small test tubes (8.5 by 75 mm.), with 0.1 ml. of antigen and 0.1 ml. of serum. After incubation for 30 minutes at 37 C, the tests are cooled at room temperature and then centrifuged at 2,000 rpm for three minutes. Readings are determined by degree of precipitate flocculation as 4+, 3+, 2+, 1+, or ±; the 4+, 3+, and 2+ tests have sparkling, clear supernates, with some cloudiness appearing at the 1+ to ± readings. A negative test is cloudy and there is no agglutination.

Table 1.—*Screening Tests for Trichinosis with Undiluted Serums*

Diagnosis	No. of Cases	Complement-Fixation	Latex-Agglutination
Trichinosis	20	Positive	Positive
Syphilis	10	Negative	Negative
Rheumatoid arthritis	10	Negative	Negative
Echinococciasis	4	Negative	Negative
Normal	50	Negative	Negative

We have used also an antigen control consisting of glycine buffer solution and particles only (without antigen extract), with each serum tested. This is to control nonspecific agglutination of latex particles. No such nonspecific agglutination has been observed to date.

Tests have been performed on lyophilized stored serum, preserved with thimerosal (Merthiolate) from known cases of trichinosis; on preserved, lyophilized, or stored serum from persons with syphilis, rheumatoid arthritis, and Echinococcus

---

Chief, Immunohematology Section (Mrs. Innella) and Commanding Officer (Major Redner), First U. S. Army Medical Laboratory, New York.

disease; and on preserved lyophilized, stored and fresh serum from persons considered to be normal controls. The complement-fixation and latex particle–agglutination tests were performed on undiluted serums and all positive reacting serums were titrated in both methods. Results obtained in all tests with undiluted serums are recorded in table 1, and titrations of all reacting serums in table 2.

Comment

The results recorded in table 1 indicate that the degree of specificity obtained in the latex test for trichinosis remarkably parallels that obtained by the complement-fixation test performed in this laboratory. In tests for sensitivity (table 2) the latex test is at least as sensitive as the complement-fixation test and, in most cases, more sensitive. While it is realized that this study is incomplete in that serums from persons with parasitic infestations such as strongyloidiasis, filariasis, and schistosomiasis and fresh serums from Trichinella-infected or possibly infected persons have not been included, these preliminary tests are encouraging. Complement-fixation tests are informative, but well-trained technicians are needed and, unless the test is performed in copious numbers, reagents are expensive and the procedure is time-consuming. The bentonite-flocculation test was not used in this study, but past experience with it in this laboratory proves it to be more laborious and much more subjective in interpretation than the latex-agglutination test. Once an antigen extract has been prepared, it is extremely simple to perform the latex-agglutination test for trichinosis. Antigen extracts can be prepared in large quantities, lyophilized, and used over long periods of time, without loss of activity. As previously mentioned, the extract used in this study was prepared and lyophilized three years ago. The volumes of serum and reagents used for the latex test are extremely small (0.1 ml.), rendering it suitable for both diagnostic and epidemiologic studies.

[†] C.F.: Complement-fixation test.
[‡] AC: Anticomplementary in complement-fixation tests.

The latex test was performed both in the tube, as described, and on a slide. Results of both tests were the same. For the slide test, latex particles of larger size are necessary, however, and a more concentrated Trichinella extract must be used. The tube test is preferred in this laboratory, both because it permits a conservation of antigen extract and because the latex particles of 0.81 μ size are also used in this laboratory for tests for rheumatoid arthritis. The test has been performed in various volumes from 0.1 to 1.0 ml., with no change in reactivity. However, for dispensary laboratories and doctors' offices where small-size tubes, water baths, and centrifuges may not be available and for epidemiologic purposes, the slide test, simply performed with one drop of latex Trichinella antigen mixed with one drop of serum, is an advantage. It is believed that the latex Trichinella antigen will lend itself well to commercial preparation.

Summary

The latex test is a simple serologic test for trichinosis, in which Trichinella (Trichina) extract, as the antigen, and latex (polystyrene) particles are used. In parallel tests with a number of serums from known cases of trichinosis and other pathological and normal serums, the latex test has been shown to be as specific and as sensitive as the complement-fixation test, and, in some cases, more sensitive.

Although described here as a tube test, the latex test may also be performed on slides. The simplicity and ease with which it can be performed render it useful for small laboratories for diagnostic purposes and for large-scale epidemiologic studies.

FATAL JAUNDICE AFTER ADMINISTRATION OF BETA-PHENYLISOPROPYLHYDRAZINE

REPORT OF A CASE

Daniel T. Beer, M.D.
and
Fenton Schaffner, M.D., New York

The therapeutic usefulness of iproniazid prompted the search for related compounds when hepatotoxicity was reported.[1] One of the newer analogues developed is beta-phenylisopropylhydrazine (Catron), and the following case represents a hepatic reaction with a fatal outcome after its administration.

A 65-year-old woman entered the Mount Sinai Hospital with a one-week history of jaundice. The patient, who had severe hypertension, had previously taken many drugs. Six weeks prior to admission she was given 18 mg. a day of beta-phenylisopropylhydrazine for two weeks; then therapy was maintained with 12 mg. a day in addition to chlorothiazide and reserpine. Her blood pressure of 240/120 mm. Hg, which was unresponsive to treatment with chlorothiazide, hydralazine, ganglionic blocking agents, and reserpine, was reduced to 160/90 mm. Hg after two weeks of beta-phenylisopropylhydrazine therapy, and she was symptomatically better. During the week preceding admission, after a total dose of about 600 mg. of beta-phenylisopropylhydrazine, she noted dark urine, light stools, and progressively increasing lethargy, about which she neglected to tell her physician.

From the departments of medicine and pathology of the Mount Sinai Hospital. Dr. Beer is now with the Department of Medicine, Montefiore Hospital, Bronx, N. Y.

She continued to take her medicaments in the prescribed amounts. When seen by her physician on the day of admission, she was deeply icteric and was hospitalized immediately. Her history was significant only in that severe hypertension had been present for 15 to 20 years. She had had a transient cerebrovascular accident five years prior to admission and an episode of myocardial ischemia one year prior to admission. She had no history of previous liver disease and was not known to have been exposed to hepatitis or known hepatotoxic agents.

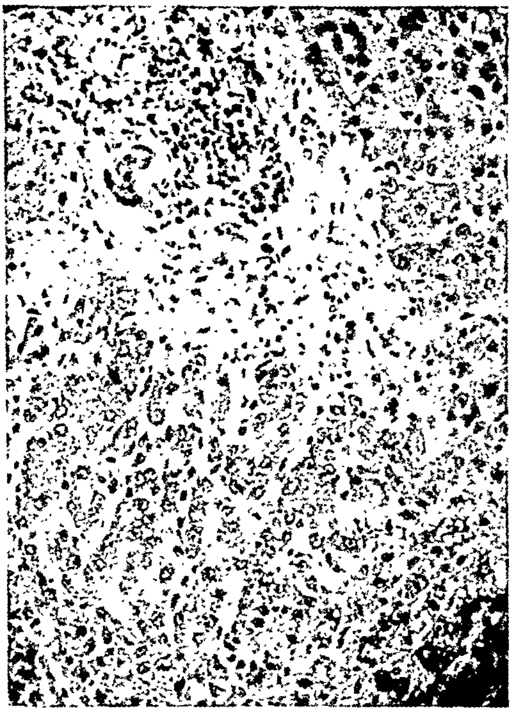

Fig. 1.—Postmortem needle biopsy specimen of liver, showing area of massive necrosis around portal tract (hematoxylin-eosin stain, × 120).

On admission to the hospital, she was lethargic and deeply icteric, with a strong fetor hepaticus. Vital signs were within normal limits. Blood pressure was 150/90 mm. Hg. In addition to lethargy and icterus, a flapping tremor was present and a soft, nontender liver was felt 2 cm. below the right costal margin. The spleen was not palpable. The remainder of the examination was within normal limits. The hemoglobin level was 13.8 Gm.%; the white blood cell count was 14,750 per cubic millimeter, with 88% polymorphonuclear leukocytes, 4% band forms, 5% lymphocytes, 1% eosinophils, 1% basophils, and 1% monocytes. The urine had a specific gravity of 1.020 and contained a trace of albumin, no sugar or acetone, and occasional red and white blood cells. The blood urea nitrogen level was 21 mg.%, and the serum cholesterol level was 310 mg.%, with 215 mg.% esterified. The serum bilirubin level was 22.2 mg.%, with 15 mg.% conjugated. The total serum protein level was 7.6 Gm.%, with albumin 3.2 Gm.% and globulin 4.4 Gm.% The serum alkaline phosphatase activity was 28 King-Armstrong units; serum glutamic oxalacetic transaminase (SGO-T) level was 465 units; prothrombin time was 33 seconds (control 12.5 seconds). The electrocardiograph showed nonspecific T-wave abnormalities.

The patient received steroids intravenously and vitamin K parenterally and was given neomycin by stomach tube and enemas. Despite these measures, her condition deteriorated; she gradually became comatose and died three days after admission.

Biopsy of the liver was obtained with a Vim-Silverman needle after death. Autopsy was not performed. The liver architecture was generally intact. Large areas of necrosis were seen in which liver cells had disappeared and collapse of the stroma was beginning (fig. 1 and 2). Many inflammatory cells, predominantly polymorphonuclear leukocytes, were present in the necrotic areas and in the portal tracts. In the regions of remaining parenchyma, the liver cells showed considerable variation from cell to cell with vacuolization of cytoplasm and differences in nuclear staining. Severe bile stasis was present. Occasional acidophilic bodies were noted. The Kupffer cells were proliferated and contained much polysaccharide, which stained with the periodic acid–Schiff reaction after diastase digestion. Numerous proliferating ductules were noted, especially in the areas of necrosis; in

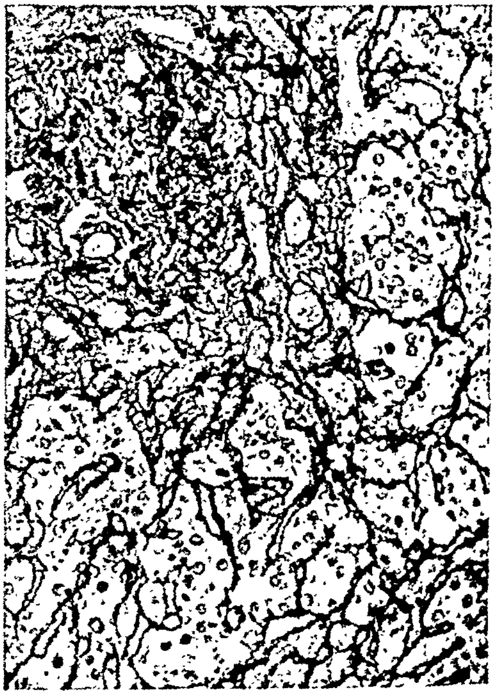

Fig. 2.—Same area as shown in figure 1, showing collapse of reticulum framework in necrotic zone (Gomori silver impregnation, × 120).

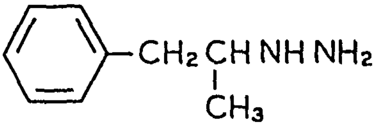
the same areas the reticulum appeared to be condensed. The central veins were the site of a rather severe phlebitis.

Comment

Beta-phenylisopropylhydrazine is a congener of amphetamine and is structurally represented as shown below.



It is a hydrazine derivative. Two functions have been ascribed to this drug: first, monoamine oxidase inhibition and, second, a dihydroxyphenylalamine (DOPA)–decarboxylase coenzyme inhibition. Its total effect is dependent on which enzyme inhibition predominates. As a monoamine oxidase inhibitor in the brain, it is 50 times more potent than iproniazid, although in the liver it is about equal to iproniazid.[2] It is longer acting than iproniazid, e. g., one dose exerts an effect for several days.[3] It is known to potentiate the action of other drugs such as tranquilizers and amphetamine.[4] Beta-phenylisopropylhydrazine has been used in treatment of mental depression, angina pectoris, rheumatoid arthritis, and experimentally in hypertension. Agin[5] reports no signs of toxicity in a group of patients with psychoneurotic and involutional disorders given 12 mg. a day, as measured by blood counts, urinalysis, and various hepatic tests; over a three-month period there was clinical improvement generally characterized by elevation of mood.

In hypertension equally gratifying results, without toxicity, are reported with doses of 6.25 to 25 mg. per day of the drug for at least two months.[6] Doses of 25 mg. daily until blood pressure is controlled, with maintenance at 6 to 12 mg. daily, are suggested by some.[7] Although the manufacturer states that the use of the drug in hypertension is on an experimental basis and the daily dose should never exceed 12 mg. a day, the patient reported here received 18 mg. a day initially and continued taking the drug for a week after jaundice had appeared. While none of the currently available hepatic tests seems to be of value in predicting the appearance of jaundice, alteration of the results of any of them, particularly serum bilirubin or transaminase, during therapy should be followed by immediate cessation of use of the drug.

Popper[1a] described pathological findings in the liver in 27 cases of jaundice associated with iproniazid therapy. Changes in appearance of the liver were identical to changes seen in viral hepatitis. Several other unrelated drugs have been reported to produce the same type of hepatitis-like picture.[8] The characteristic feature of jaundice produced by any of these drugs is a low incidence but a high mortality. The clinical findings, the course, and the laboratory data in the present case are also the same as in iproniazid jaundice and in severe viral hepatitis. This suggests the possibilities that the hepatic reaction is the result of a coincidental viral hepatitis, that the drug aggravated a preexisting or carrier stage of hepatitis, or that this represents an exceptionally occurring hepatic hypersensitivity reaction. The findings in a single case do not permit the selection of the most likely possibility. The present case is reported to alert physicians to the fact that a viral hepatitis-like picture may develop during administration of this drug and that such cases should be documented in the attempt to establish a causal relationship.

Summary

A fatal case of jaundice resembling viral hepatitis developed in a patient after administration of about 600 mg. of beta-phenylisopropylhydrazine over a six-week period. The clinical, laboratory, and pathological findings in the liver were the same as those in jaundice caused by iproniazid and were indistinguishable from severe viral hepatitis. Documentation of similar cases is needed to establish a causal relationship between the drug and hepatitis.

Fifth Avenue and 100th Street (29) (Dr. Schaffner).

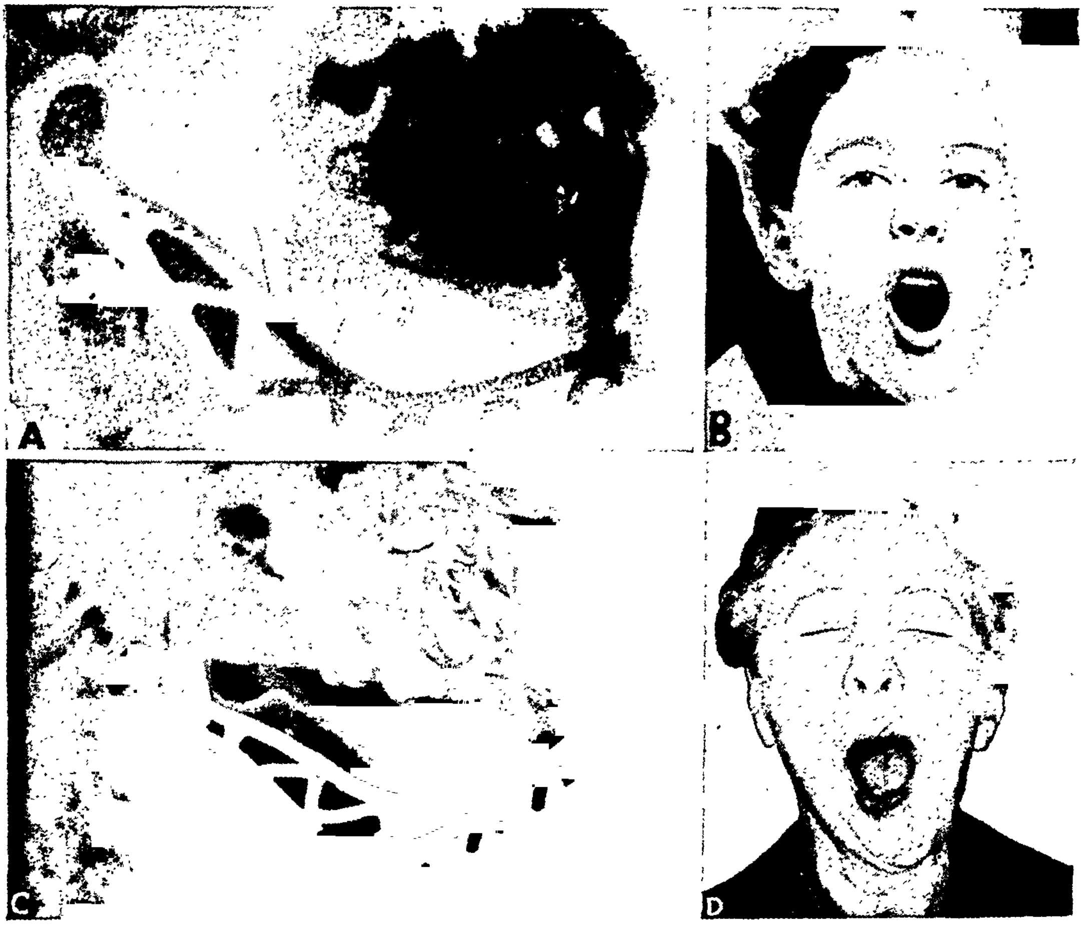
SILVER IMPLANT IN SITU FIFTY-ONE YEARS AFTER RESECTION OF MANDIBLE

Marsh Robinson, D.D.S., M.D., Santa Monica, Calif.

A 61-year-old housewife was referred on March 26, 1958, to my office because a roentgenogram taken by her dentist showed an angular fracture of her left metal mandible. She had no complaints. Her history revealed that at 11 years of age she developed an extraoral protuberance. Her family doctor incised the protuberance, which yielded black blood. The wound healed and she was referred to Dr. John B. Murphy in Chicago. In March, 1908, Dr. Murphy removed [1] her left mandible and inserted a metal jaw. The reason for the resection was that "a giant cell sarcoma had attacked the angle of the right half of the mandible." The external incision continued to drain until January of 1909, when the lower portion of the metal jaw was removed. Within two weeks the drainage stopped. She had no difficulty with her jaw until about eight years ago. At that time a lower tooth was removed while she was under general anesthesia and she thought the metal jaw broke. This caused her no difficulty except she felt that her lower teeth did not fit properly against the upper teeth.



A and *B*, roentgenogram and photograph of patient with massive silver implant. Note "freedom of motion of jaw with only slight flattening of cheek on right side."[1] *C* and *D*, roentgenogram and photograph of same patient 51 years after implant was placed. *Note fracture of metal in area of mandibular angle.* (*A* and *B* reproduced from Murphy.[1])

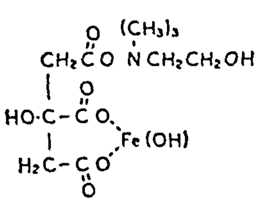
COUNCIL ON DRUGS

NEW AND NONOFFICIAL DRUGS

The following descriptions of drugs are based on available evidence and do not in any case imply endorsement by the Council.

H. D. Kautz, M.D., *Secretary.*

Ferrocholinate (Chel-Iron, Ferrolip).—Iron choline citrate chelate.—A chelate prepared by reacting equimolar quantities of freshly precipitated ferric hydroxide with choline dihydrogen citrate. The structural formula of ferrocholinate may be represented as follows:



Actions and Uses.—Ferrocholinate is a hematinic agent which is used for the treatment of iron deficiency anemias. The iron of this preparation is present in a chelated form; *i. e.*, the metallic ion is sequestered and firmly bound into a ring within the chelating molecule. This process apparently alters its toxic properties and the diffusion of the iron into the circulation. Thus, although ferrocholinate is much more soluble in water and digestive juices than either ferrous sulfate or ferrous gluconate, its acute toxicity is less. For example, doses of 200 to 250 mg. of elemental iron per kilogram of body weight, as the sulfate or gluconate, are fatal to rabbits and dogs, but the same dose of elemental iron as ferrocholinate is well tolerated in these animals. In addition to a lower acute toxicity, ferrocholinate also causes less gastrointestinal ulceration, vomiting, diarrhea, and weight loss in animals than does the same dose of iron as ferrous sulfate or ferrous gluconate.

Ferrocholinate is proposed for oral administration in the prevention and treatment of microcytic, hypochromic anemias due to iron deficiency. Such anemias may be the result of deficient iron intake, excessive loss of iron as in hemorrhage or heavy menstrual flow, or in infancy or pregnancy in which the demand for hemoglobin is increased. Clinical experience with ferrocholinate for any of these conditions has been very limited to date. Although preliminary studies would suggest that hematological responses are comparable to those previously attained from other iron preparations, more clinical experience is necessary to substantiate the ultimate usefulness of ferrocholinate as a hematinic agent.

The available clinical evidence, although meager, would appear to bear out the results of the laboratory toxicity experiments; that is, ferrocholinate seems to be better tolerated in the therapeutic dosage range than are ferrous sulfate and ferrous gluconate. In the small number of patients so far observed, complaints were limited to mild nausea, diarrhea, or constipation. These complaints tended to disappear on continuation of therapy, and in no case were they so severe as to require discontinuance of medication.

On the basis of these laboratory and clinical observations, ferrocholinate may have an advantage over other orally administered iron preparations from the standpoint of tolerance and danger of acute toxicity after overdosage. In terms of clinical efficacy, however, present evidence is inadequate to warrant such comparisons.

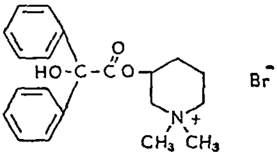
Dosage.—Ferrocholinate is administered orally. For adults and children over six years of age, the proposed dose is 330 to 660 mg. three times daily. This amount supplies 120 to 240 mg. of elemental iron per day. For infants and children under six years of age, the proposed maintenance dose is 104 mg. (12.5 mg. of elemental iron) once a day; therapeutic dosage for such patients should be determined by the physician according to the severity of anemia present. Pending more clinical evidence to support the usefulness of ferrocholinate, the foregoing doses must be regarded as tentative.

Preparations.—solution (oral) 208 mg. per cc.; syrup 33.2 mg. per cc.; tablets 330 mg.

Year of introduction: 1958.

Flint, Eaton & company cooperated by furnishing scientific data to aid in the evaluation of ferrocholinate.

Mepenzolate Methylbromide (Cantil).—1-Methyl-3-piperidyl benzilate methylbromide.—The structural formula of mepenzolate methylbromide may be represented as follows:



Actions and Uses.—Mepenzolate methylbromide is an anticholinergic compound that has been used chiefly for the relief of spasm and hypermotility associated with diseases of the lower gastrointestinal tract.

There is convincing evidence in experimental animals that mepenzolate methylbromide, in common with other atropine-like agents, is highly active and relatively specific in antagonizing the effects of acetylcholine. It inhibits both spontaneous and chemically induced intestinal contractions. Reports differ on its relative effects on various segments of the gastrointestinal tract, but there is some evidence that it has a more pronounced and prolonged spasmolytic effect on the colon than on the higher portions of the gastrointestinal tract. It causes relaxation of the sphincter of Oddi and suppresses pancreatic secretion. Its actions on other organ systems are also typical of cholinergic blocking agents.

In human subjects, mepenzolate methylbromide inhibits the motility of the small intestine and, to a lesser degree, that of the stomach. The evidence concerning its effect on the colon is conflicting, some reports indicating a more significant reduction of colon motility than of the small intestine. It is reported to produce a definite reduction in the free hydrochloric acid and total volume of gastric secretion.

Mepenzolate methylbromide has proved useful in relieving the abdominal pain, gaseous distention, and diarrhea associated with diseases of the colon. It is more effective in functional conditions, such as the irritable bowel syndrome or spastic colon, in which it has been reported to be as effective as atropine and to compare favorably with the more acceptable synthetic anticholinergic agents. It may also provide some symptomatic improvement when used as an adjunct in the management of ulcerative colitis, regional ileitis, infectious diarrheas, and other inflammatory diseases of the intestinal tract.

Side-effects that have been observed include dryness of the mouth, blurred vision, dizziness, headache, and constipation. These may frequently be satisfactorily controlled by reducing the dosage. Difficulty of urination and urinary retention in the presence of prostatic hypertrophy are claimed to occur less frequently with mepenzolate methylbromide than with other anticholinergic drugs; these complications have, nevertheless, been reported.

Mepenzolate methylbromide is contraindicated in the presence of glaucoma, pyloric obstruction, and cardiospasm. It should be used with great caution in the presence of prostatic hypertrophy.

Dosage.—Mepenzolate methylbromide is administrated orally. The optimal dosage should be carefully determined for each individual patient. For initiating therapy, 25 mg. four times daily may be tried. If the response is unsatisfactory, the dosage may be gradually increased until the desired therapeutic effect is obtained or until untoward symptoms intervene.

Preparations.—tablets 25 mg.

Year of introduction: 1956.

Lakeside Laboratories, Inc., cooperated by furnishing scientific data to aid in the evaluation of mepenzolate methylbromide.

Parenteral Use of Methylphenidate (Ritalin) Hydrochloride

The Council has reviewed the available scientific evidence relating to the usefulness and safety of methylphenidate hydrochloride when administered by the subcutaneous, intramuscular, and intravenous routes. The oral use of this central nervous system stimulant has been described previously. (See the monograph on methylphenidate hydrochloride in New and Nonofficial Drugs.) Owing to a more rapid onset of action, the injectable form of the drug is better suited for use in emergency situations in which a prompt cortical stimulating effect is desired. Parenteral therapy is indicated also in patients who, for various reasons, may be unable to take oral medication and for uncooperative patients in whom it is important to assure that a full dose is received and retained. Presently available evidence indicates that parenterally administered methylphenidate (10 mg. one to three times daily or as a single dose of 20 to 30 mg.) is useful in overcoming the drowsiness and lethargy sometimes produced by phenothiazine derivatives, rauwolfia alkaloids, barbiturates, anticonvulsants, and other sedative drugs. It may also be tried (30 to 50 mg. every 30 minutes as indicated), along with the usual supportive measures, for counteracting the signs and symptoms of acute overdosage of such agents. The drug has likewise been given parenterally (10 to 30 mg.) in the immediate postoperative period to hasten recovery from surgical and dental barbiturate anesthesia. As with the oral form of the drug, parenterally administered methylphenidate (10 to 20 mg.) can be used as a psychomotor stimulant in depressed, withdrawn, regressed individuals as a means of improving mood and behavior and for stimulating verbalization during psychiatric interviews. The dose for the latter purpose is 10 to 20 mg., given intramuscularly 10 to 15 minutes before the interview.

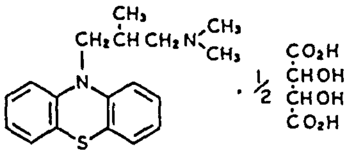
Whereas significant increases in blood pressure and pulse rate are rare when methylphenidate is administered orally, these occur not infrequently when the drug is given parenterally, especially by the intravenous route. Hence, parenteral therapy should be approached cautiously in patients with hypertension. In all patients, blood pressure should be checked before, and at frequent intervals after, each dose is injected. Other side-effects to the parenterally administered drug include occasional instances of nervousness, insomnia, anorexia, dizziness, palpitation, headache, nausea, and vomiting. Methylphenidate is contraindicated in patients with hyperexcitability and agitation and should be used cautiously in those with epilepsy.

Methylphenidate hydrochloride may be injected either subcutaneously, intramuscularly, or intravenously, the route chosen depending principally on the speed with which cortical stimulation is desired. Solutions for parenteral injection should be freshly prepared from the lyophilized powder, using the special solvent provided with each vial of the drug. Such solutions are pharmaceutically incompatible with a barbiturate or strongly alkaline solution and should not be injected through tubing or a syringe containing these agents.

The Council voted to amend New and Nonofficial Drugs to describe the parenteral use of methylphenidate hydrochloride.

Ciba Pharmaceutical Products, Inc., cooperated by furnishing scientific data to aid in the evaluation of the parenteral use of methylphenidate hydrochloride.

Trimeprazine Tartrate (Temaril).—10-(3-Dimethylamino-2-methylpropyl)phenothiazine tartrate.—The structural formula of trimeprazine tartrate may be represented as follows:



Actions and Uses.—Trimeprazine tartrate is a phenothiazine compound which is structurally and pharmacologically related to promazine. It is identical in chemical structure to promazine except for the 2-methyl substituent in the propyl chain. As may be expected, trimeprazine exerts most of the actions of the phenothiazine derivatives, such as depression of the central and sympathetic nervous systems and counteraction of histamine. However, some of these actions, especially the antiemetic, hypotensive, and potentiating effects, are not as prominent as with other phenothiazine derivatives. On the other hand, the histamine-antagonizing action of trimeprazine is, depending upon the test and mode of administration, from one and one-half to five times as potent as that of promethazine, which is closely related chemically to trimeprazine.

Pharmacological studies in animals indicated possible areas of usefulness for trimeprazine in the treatment of allergic disorders and mental or emotional states. During early clinical testing, however, it became apparent that trimeprazine, in low dosage, exerted antipruritic action which was more pronounced than any of its other effects. Clinical evaluation demonstrated that trimeprazine was effective in relieving pruritus accompanying dermatoses of allergic, inflammatory, metabolic, hemovascular, and psychic origins. In addition, it was found useful in those dermatoses, such as dermatitis herpetiformis, whose etiology is not clearly understood. Although its mode of action is not known, trimeprazine appears to exert an antipruritic effect that is not directly related to its histamine antagonism or to its tranquilizing or sedative actions. Accordingly, trimeprazine has been recommended exclusively for the symptomatic treatment of mild and severe pruritus, whether acute or chronic. It often relieves itching which is not relieved by other therapies, and, in many cases, the administration of trimeprazine permits the reduction or elimination of concomitant topical and systemic medication. Presumably, this is made possible by interrupting the itch-scratch-itch cycle, which encourages healing of lesions.

In general, all of the precautions applicable to other phenothiazine compounds, such as promethazine and chlorpromazine, should be observed when using trimeprazine. Mild and transient drowsiness is the most frequently encountered side-effect; however, it disappears, in most cases, after several days of medication. The drug has not been shown to cause jaundice, but one case of agranulocytosis has been reported; no difficulty was encountered in reversing this disorder. Because such serious side-effects are seen with some phenothiazine derivatives, even though infrequently, patients receiving trimeprazine should be watched for their possible appearance. Since virtually all reported cases of agranulocytosis associated with administration of phenothiazine compounds have occurred between the fourth and tenth weeks of treatment (including the case just cited), patients on prolonged therapy should be observed particularly during that period.

Dosage.—Trimeprazine tartrate is administered orally. Dosage should always be adjusted according to severity of the symptom and the response of the patient. The usual daily dosage for adults is 2.5 mg. four times daily or 5 mg. (as a sustained release capsule) every 12 hours. Resistant cases may require up to 30 or 40 mg. daily (nonambulatory patients with severe itching have received as much as 80 mg. in 24 hours with no ill-effects). The usual daily dosage for children up to the age of 2 years is 1.25 mg. at bedtime or, if needed, 1.25 mg. three times daily. Severe or refractory cases may require 1.25 mg. four times daily. The usual daily dosage for children 2 to 12 years of age is 2.5 mg. at bedtime or, if needed, 2.5 mg. three times daily. Severe or refractory cases may require 2.5 mg. four times daily. Total daily dosage should not exceed 5 mg. for children up to 2 years of age or 10 mg. for children 2 to 12 years of age. When itching is a nighttime problem, for adults or children, larger doses (5 or 10 mg.) should be administered at bedtime, with daytime dosage adjusted accordingly.

Preparations.—capsules (sustained release) 5 mg.; syrup 0.5 mg. per cc.; tablets 2.5 mg.

Year of introduction: 1958.

Smith Kline & French Laboratories cooperated by furnishing scientific data to aid in the evaluation of trimeprazine tartrate.

DRUG-INDUCED HEMOLYTIC ANEMIA

DRUGS that are innocuous to many patients result in untoward reactions in a few sensitive persons. Such reactions, when they involve the blood, are particularly serious. Most investigators have focused attention on immune mechanisms and have searched extensively for antibodies in sensitive patients. In a few instances antibodies have been implicated clearly in drug reactions affecting the blood,[1] but more often this approach has been unrewarding. Recently, a new mechanism of drug sensitivity has become apparent. Biochemical investigations of drug-induced hemolytic anemias have clarified the mechanism of sensitivity in this disorder. At the same time, the pathogenesis of favism has been at least partly elucidated. These studies have recently been reviewed in detail.[2]

The hemolytic effect of the antimalarial drug, primaquine, was studied in many volunteer subjects. By means of cross-transfusion experiments with red blood cells labeled with radioactive chromium (Cr^{51}) it was established that sensitivity to this drug is due to an intrinsic abnormality of the red blood cell. These abnormal red cells were found to be also uniquely sensitive to the hemolytic effect of a variety of other drugs including acetanilid, sulfanilamide, acetophenetidin (Phenacetin), naphthalene, nitrofurantoin (Furadantin), and, in very large doses, even aspirin. Only the older members of the red blood cell population were susceptible to hemolysis. Thus, hemolytic anemia induced by primaquine was self-limited: even if drug administration was continued, the hemoglobin level returned to normal. Since young erythrocytes are metabolically more active than older ones, attention was focused on biochemical processes in the erythrocytes. It was discovered that the concentration of the tripeptide sulfhydryl compound glutathione (GSH) in the red blood cells of sensitive subjects was substantially reduced. When drug-sensitive, GSH-deficient cells were incubated with acetylphenylhydrazine, much of the remaining GSH was changed to oxidized glutathione (GSSG). No such change occurred with nonsensitive red blood cells. This finding formed the basis of a relatively simple in vitro test for drug sensitivity, the glutathione stability test.[3] Furthermore, attention was drawn to the metabolic pathways important in the maintenance of glutathione in the reduced state. Investigations of these pathways resulted in the demonstration that red blood cells of susceptible persons are deficient in activity of the enzyme glucose-6-phosphate dehydrogenase.[4] This enzyme catalyzes the first step in the oxidation of glucose by the red blood cell. In the absence of this enzyme the red cell is unable to reduce triphosphopyridine nucleotide (TPN), the coenzyme most effective in maintaining glutathione in its reduced state. It is not clear whether red blood cells of sensitive subjects contain less of the enzyme or whether they contain an abnormal enzyme molecule with diminished enzyme activity.

It has been suggested that hemolytic drugs may induce the formation of hemoglobin-peroxide compounds. When sufficient reduced glutathione is present these compounds are destroyed through the mediation of another red blood cell enzyme, glutathione peroxidase.[5] Since drug-sensitive cells are

unable to maintain their supply of reduced glutathione, the hemoglobin may be destroyed by the formation of peroxide compounds under the influence of drugs. It has not been established whether these speculations are correct, and it is possible that the actual chain of events leading to red blood cell destruction is more complex. Extensive studies of other enzymes in drug-sensitive red blood cells have resulted in the demonstration of other abnormalities, some of which may well represent attempts to compensate for a primary deficiency of glucose-6-phosphate dehydrogenase.

Since primaquine sensitivity is limited to certain racial groups, it seemed probable that this defect is transmitted genetically. Family studies with use of the glutathione stability test demonstrated that the red blood cell defect is transmitted as a sex-linked gene, with varying degrees of penetrance in females.[6] Later studies using direct assay of the enzyme glucose-6-phosphate dehydrogenase appear to substantiate these conclusions.

Even in societies most exposed to hemolytic drugs, contact with naturally occurring agents, such as Vicia fava beans, might be expected to lead to early death in some affected persons, resulting in the gradual elimination from the population of the gene for glucose-6-phosphate dehydrogenase deficiency. Why, then, does it persist in some populations at levels as high as 35%? The answer may be in hidden advantages conferred by this gene. An analogous situation occurs with the sickle cell gene. The homozygote suffers from sickle disease, which usually leads to early death, but yet the sickling gene is maintained at very high levels in some Negro populations. Evidence has accumulated that this is due to a balancing, beneficial effect, namely, increased resistance to malaria.[7] Because of the racial distribution of primaquine sensitivity, namely, a high incidence among Sardinians, Sephardic Jews, and Negroes, it has been suggested malaria might also be the factor that helps to maintain high levels of the gene involved in glucose-6-phosphate dehydrogenase deficiency. Evidence has been accumulated by Motulsky[8] which shows marked parallelism between the distribution of this enzymatic deficiency and that of the malarial parasite.

The finding that this type of drug sensitivity is due to a hereditary enzymatic deficiency should lead to investigation of other types of drug reactions from the biochemical and genetic point of view.

DIAGNOSIS OF EFFORT SYNDROME

The characteristic symptoms and clinical findings of effort syndrome still constitute the fundamental basis for diagnosis. The chief manifestations are palpitation, dyspnea, precordial distress, and exhaustion, all of which are aggravated by mild exercise. When the symptoms are typical and there *is no evidence of heart disease on physical examination*, radiologically, and electrocardiographically, diagnosis is easy. In the presence of organic heart disease, diagnosis is rendered more difficult. It can still be established, in most such instances, by a careful correlation of the nature and extent of the avowed disability with the demonstrable evidence of heart disease. Tests of effort tolerance and of the response to hyperventilation have been devised to assist in demonstrating the neurotic basis for the altered functional capacity, but they have not enjoyed wide usage.

The effort syndrome may superficially resemble hyperthyroidism, but differentiation is seldom difficult if one is familiar with the physiological effects of excessive thyroid hormone; the personality structure, and therefore the patient's attitude toward the presenting symptoms, contrasts sharply in the cardiac neurotic as compared to the hyperthyroid person. Where reasonable doubt exists, isotope studies of thyroid function will clarify the diagnosis. The only type of hypertension which may present a problem in differential diagnosis is that associated with pheochromocytoma. When this tumor gives rise to paroxysmal attacks characterized by intermittent hypertension and evidence of sympathetic discharge, the true nature of the disorder is not apt to be confused with the effort syndrome. Persistent hypertension due to pheochromocytoma may mimic the effort syndrome but can be correctly identified by blocking tests and determination of urine catecholamines.

CHANGE OF ADDRESS

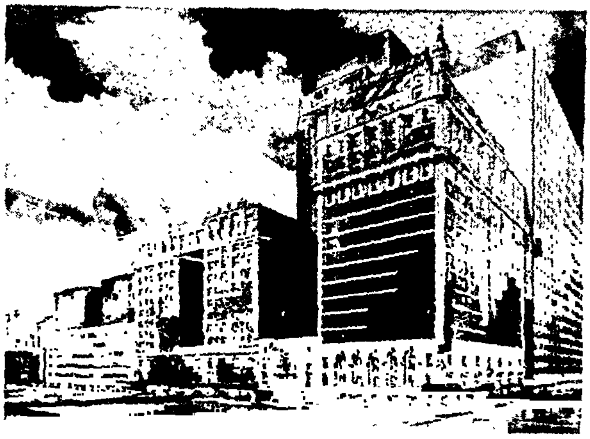
If you change your address please notify The Journal at least six weeks before the change is made. Include the address label clipped from your latest copy of The Journal, being sure to clearly state both your old and new address. If your city has Postal Zone Numbers, be sure to include this Zone Number in your new address.

WELCOME TO DALLAS

From a log cabin at a ferry across the Trinity River to a city whose fame and influence are international—that is the colorful history of Dallas, already home of more than a million Texans and 16th largest city in the United States. The city was born when John Neely Bryan, a Tennessean, came from Arkansas in 1841 to investigate the possibilities of a trading post. Despite its almost unbelievable progress, Dallas has already achieved a charm all its own.

Records fail to show definitely for whom the city was named. Bryan has been quoted as saying that "The town was named for my friend Dallas," but it has never been known who that friend was. Sightseers enjoy visiting the city's many points of interest, ranging from Bryan's first tiny log cabin on the courthouse lawn to beautiful residential areas and modern skyscrapers, including the two tallest buildings west of the Mississippi River.

Geographically situated at the center of the mid-continent oil fields, Dallas is an important headquarters for more than 1,000 firms engaged in the oil production industry and many other concerns in allied industries. Aircraft production, insurance, finance and banking, oil production, electronics, and regional wholesale distribution are the city's leading industries. The city is also the Southwest's top convention center, and it is rapidly becoming one of the nation's most popular. Last year Dallas played host to almost 200,000 convention-goers. Conventioneers enjoy Dallas' ample meeting and exhibit space, including the beautiful new Memorial Auditorium, where this year's clinical meeting will be held, modern in appearance and versatile enough to fit any size group. Dallas is also in the heart of one of the nation's largest blackland belts. Principal crops grown in this area include cotton, corn, wheat, and dairy products. Dallas County has over 2,500 farms.



Adolphus Hotel

The park systems of Dallas include more than 100 different parks, with a total of more than 6,500 acres of developed recreational facilities. Swimming, boating, fishing, or visiting the Marsalis Park Zoo are all popular pastimes in Dallas. Making these many parks enjoyable throughout the year is the fine Texas climate.

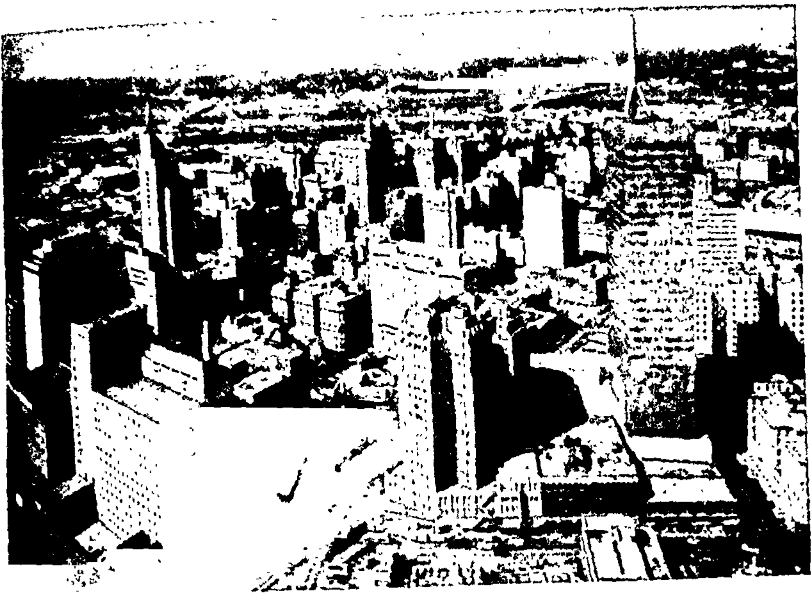
Dallas has a dry, temperate, healthful climate. The average growing season (period between frosts) is 243 days. The average annual number of days with a minimal temperature of 32 F or less is 30. The average number of days of rain (0.01 in. or more) is 81. The average annual snowfall is 2.4 in. (over an average of four days). The annual normal temperature at Dallas is 66.5 F. The annual maximum temperature is 76.6 F. Average annual rainfall is 34.43 in.

Dallas has gained wide fame in recent years as a medical center and as this fame increased new hospitals were established until the city now has 29 hospitals. Nine fully accredited hospitals have some 3,500 rooms. The Dallas County Medical Society has 1,106 members.

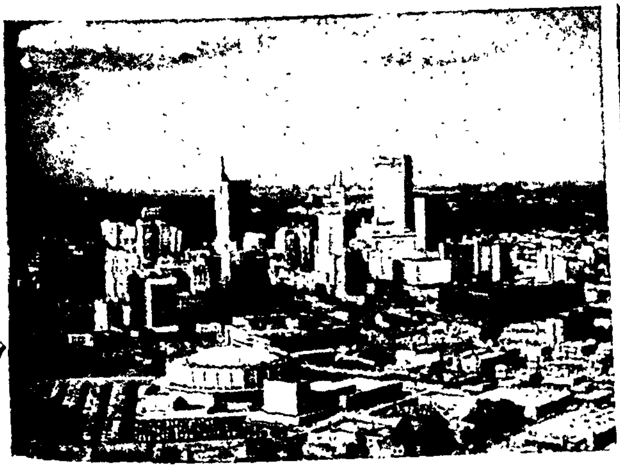
Some 70 theaters throughout the city offer a wide variety of films and there are numerous nightclubs and restaurants presenting excellent entertainment. For the gourmet there are Mexican, Swedish, Italian, German, Greek, and Chinese foods.

Located almost midway between the two oceans at the heart of the Southwest's famous highway network, Dallas is served by six major airlines and five of its nine railroads provide passenger service. Nonstop air service is offered to and from Chicago, New York, Los Angeles, Washington, D. C., Cincinnati, San Francisco, St. Louis, New Orleans, Kansas City, Mo., Houston, Atlanta, Ga., Denver, and other major cities. U. S. highways connecting Dallas with the rest of the nation include, 75, 77, and 67 to the north and south and 80 to the east and west. Almost all of these highways now enter Dallas as divided expressways.

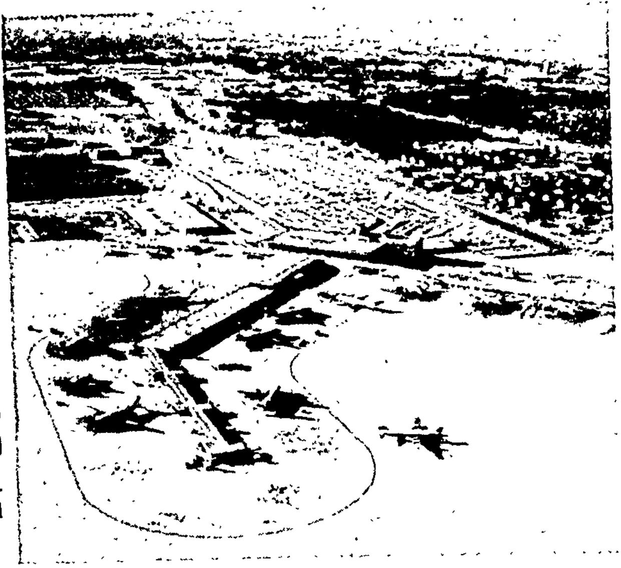
DALLAS SIGHTS



Dallas' many new buildings are visible from observation deck of Southland Tower, tallest building west of Mississippi. Observation deck is open to public.

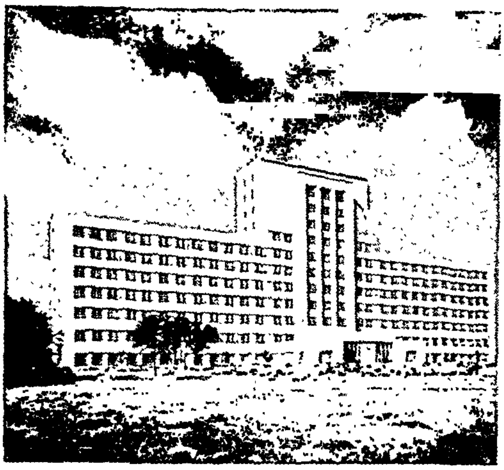


Dallas presents one of nation's most dramatic skylines, including two tallest buildings west of Mississippi River. In foreground is new memorial auditorium.

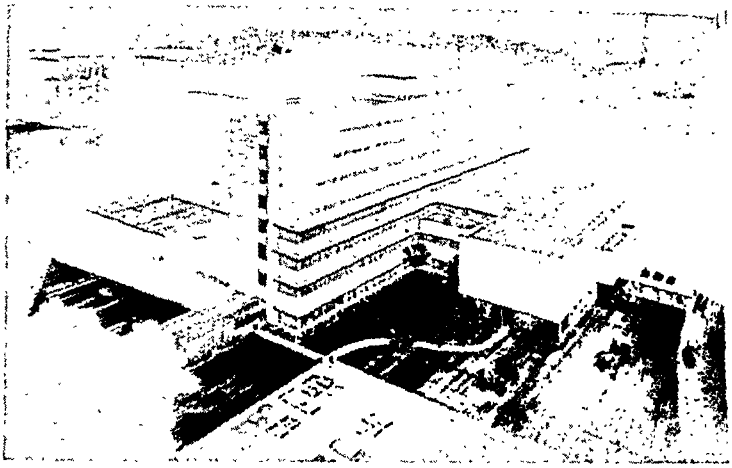


First sight many will see in Dallas—the airport.

Dallas' Monorail, one of few operating in United States, is located on grounds of State Fair of Texas.

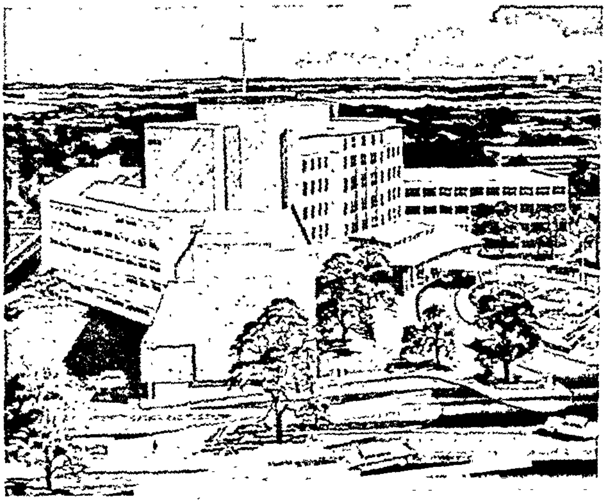


Parkland Memorial Hospital, located on outskirts of downtown Dallas, is hospital of city of Dallas as well as Dallas County.

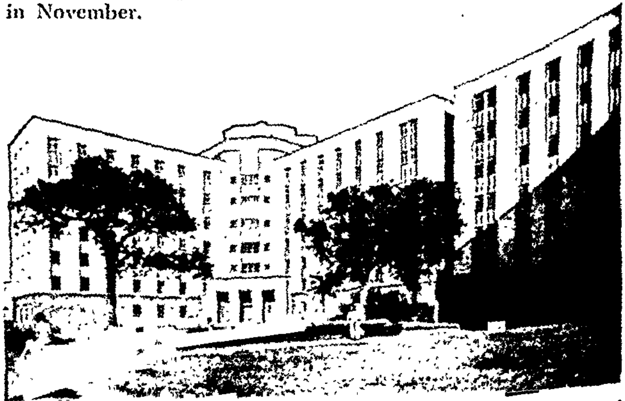


Saint Paul Hospital is to be part of Southwestern Medical Center.

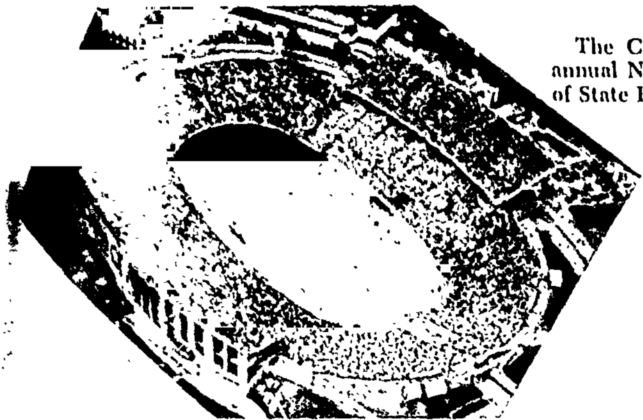
Southern Methodist University's modern campus in Dallas boasts more than 50 buildings.



Methodist Hospital in Dallas will open its new building in November.

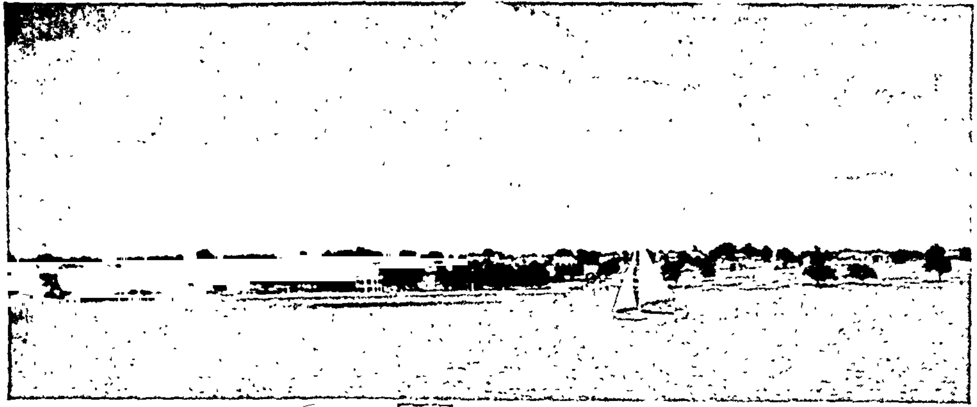


Women's and Children's Building, adjoining Truitt Memorial Unit, of Baylor University Hospital.



The Cotton Bowl, home of S. M. U.'s Mustangs and scene of annual New Year's Day Cotton Bowl Game, is located on grounds of State Fair of Texas.

White Rock Lake, year-round recreation spot, with facilities for swimming, sailing, and water skiing, is just 15 minutes from downtown Dallas.



Although Texas Longhorn is disappearing from the plains, many are kept by cattlemen who remember Texas' early days.

Parkland Memorial Hospital (center), with University of Texas and Southwestern Medical School on right.

THE CLINICAL MEETING

AMERICAN MEDICAL ASSOCIATION

Dallas, Dec. 1-4, 1959

OFFICIAL CALL

To the Officers and Members of the American Medical Association

The Clinical Meeting of the American Medical Association will be held in Dallas, Dec. 1-4, 1959.

House of Delegates: The House of Delegates will convene at 10 a. m. Tuesday, Dec. 1, in the Main Ball Room of the Adolphus Hotel. The representation of the constituent associations in the House for the 1959 Clinical Meeting is as follows:

Alabama	2	Montana	1
Alaska	1	Nebraska	2
Arizona	1	Nevada	1
Arkansas	2	New Hampshire	1
California	17	New Jersey	6
Colorado	3	New Mexico	1
Connecticut	3	New York	17
Delaware	1	North Carolina	3
District of Columbia	2	North Dakota	1
Florida	4	Ohio	9
Georgia	3	Oklahoma	2
Hawaii	1	Oregon	2
Idaho	1	Pennsylvania	11
Illinois	11	Puerto Rico	1
Indiana	5	Rhode Island	1
Iowa	3	South Carolina	2
Isthmian Canal Zone	1	South Dakota	1
Kansas	2	Tennessee	3
Kentucky	2	Texas	8
Louisiana	2	Utah	1
Maine	1	Vermont	1
Maryland	3	Virgin Islands	1
Massachusetts	6	Virginia	3
Michigan	7	Washington	3
Minnesota	4	West Virginia	2
Mississippi	2	Wisconsin	4
Missouri	4	Wyoming	1

The scientific sections of the American Medical Association, the Medical Corps of the Army, the Medical Corps of the Navy, the Medical Corps of the Air Force, the Public Health Service, and the Veterans Administration are entitled to one delegate each.

Scientific Meetings: The Opening General Meeting will begin at 10 a. m., Tuesday, Dec. 1, in the Theater (Room 5, 2nd floor) of the Dallas Memorial Auditorium.

The Scientific Program will open Tuesday, Dec. 1, at 11 a. m., and will continue through the afternoon of that day. The program will continue on Wednesday and Thursday, Dec. 2 and 3, on Friday morning, Dec. 4, closing at 12 noon.

Scientific Exhibits: The scientific exhibits will be housed in the auxiliary exhibit area (1st floor) of the Dallas Memorial Auditorium; the exhibits will be open from 8:30 a. m. to 5:30 p. m. on Tuesday, Wednesday and Thursday, Dec. 1-3, and from 8:30 a. m. to 12 noon on Friday, Dec. 4.

Industrial Exhibits: The industrial exhibits will be housed in the main exhibit area (1st floor) of the Dallas Memorial Auditorium; the exhibits will be open from 8:30 a. m. to 5:30 p. m. on Tuesday, Wednesday, and Thursday, Dec. 1-3, and from 8:30 a. m. to 12 noon on Friday, Dec. 4.

Registration: The Registration Bureau will be located near the entrance to the main exhibit area (1st floor) in the Dallas Memorial Auditorium; it will be open as follows:

Tuesday, Dec. 1—8 a. m. to 5:30 p. m.
Wednesday, Dec. 2—8:30 a. m. to 5:30 p. m.
Thursday, Dec. 3—8:30 a. m. to 5:30 p. m.
Friday, Dec. 4—8:30 a. m. to 12 noon.

Louis M. Orr, President
Norman A. Welch, Speaker, House of Delegates
R. M. McKeown, Secretary-Treasurer

GENERAL INFORMATION FOR DELEGATES

The House of Delegates will convene at 10 a. m., Tuesday, Dec. 1, 1959, in the Main Ball Room of the Adolphus Hotel.

The Reference Committee on Credentials will meet in the French Room at 8 a. m. on Tuesday, Dec. 1; the committee will also meet preceding each subsequent meeting of the House of Delegates. Each delegate should present properly executed credentials to the reference committee, which have been signed by the president or secretary of the constituent association, by the chairman or secretary of a section of the Scientific Assembly, or by the surgeon general or chief medical director of the government service represented. Alternate delegates presenting credentials should see that the delegates whose places they are to take have signed the alternate authorization.

Credentials should be presented to the Reference Committee on Credentials as early as possible on Tuesday, Dec. 1, so that the official roll of the House may be prepared and the House of Delegates may organize promptly and proceed with its business.

Meeting rooms have been provided for the use of Reference Committees of the House of Delegates. Reference Committee meetings must be held at the time and in the room assigned so that any who are interested in referred matters may appear before the committees.

Typists will be available in the AMA Headquarters Office (Regency Room) for preparing official reports, resolutions, and motions.

OFFICIALS OF THE AMERICAN MEDICAL ASSOCIATION—1959-1960

GENERAL OFFICERS

President, Louis M. Orr	Orlando, Fla.
President-Elect, E. Vincent Askey	Los Angeles
Vice President, J. Stanley Kenney	New York

The Executive Vice President, Assistant Executive Vice President, and Editor are *ex officio* members of all Standing Committees.

REGISTRATION

The Registration Bureau will be located near the entrance to the main exhibit area (1st floor) in the Dallas Memorial Auditorium; it will be open as follows:

Tuesday, Dec. 1—8 a.m. to 5:30 p.m.
Wednesday, Dec. 2—8:30 a.m. to 5:30 p.m.
Thursday, Dec. 3—8:30 a.m. to 5:30 p.m.
Friday, Dec. 4—8:30 a.m. to 12 noon

An information window will be operated in connection with the Registration Bureau.

Who May Register

Members—Active, Affiliate, Associate, Service and Honorary—and invited guests may register for attendance at meetings.

Residents, interns, medical students, Student A. M. A. Members, and registered nurses will be given registration cards at a designated window. These should be filled in and presented at the window indicated, together with their professional identification or a card or letter signed by the superintendent of the hospital where they are registered or the dean of the medical school they attend.

Suggestions That Will Facilitate Registration

Members who have Advance Registration Cards can be processed with little or no delay, if the name of your convention hotel or local address and the number of guests you wish to admit are filled in prior to registering.

Present completed card at windows marked "Advance Registration" and you will receive a badge and a copy of the Official Program.

If you do not have an Advance Registration Card and wish us to send one to you, just fill out the form on advertising page 86 and return it before November 6, 1959, to the American Medical Association, 535 North Dearborn Street, Chicago 10, Illinois.

Members without Advance Registration Cards will find blank cards to fill in on tables near the registration windows. The filled-in card should be presented, together with your American Medical Association Membership pocket card, at the window indicated. Your pocket card will be returned to you and you will receive a badge and a copy of the Official Program.

See advertising page 336 for hotel registration coupon, room rates schedule, and map of Dallas.

Registration at Adolphus Hotel

General Officers of the American Medical Association, members of the House of Delegates, alternate delegates, and the president, president-elect, and constitutional secretary of the constituent medical associations may register at the Adolphus Hotel. Advance registration facilities will be set up in the A. M. A. Headquarters Office in the Regency Room; it will be open as follows:

Sunday, Nov. 29–4 p.m. to 8 p.m.
Monday, Nov. 30–9 a.m. to 8 p.m.

On Tuesday, Dec. 1, registration facilities will be set up in the French Room; it will be open from 8 a.m. to 12 noon.

Delegates are urged to register early so that all members of the House of Delegates may be seated in time for the opening session of the House, which will convene at 10 a.m., Tuesday, Dec. 1.

Medical Society Executives Registration

Staff members of state, territorial, and county medical societies, editors of state medical journals and county medical society bulletins, and staff members of national organizations of medical interest may register in the A. M. A. Headquarters Office in the Regency Room; advance registration facilities will be open as follows:

Sunday, Nov. 29–4 p.m. to 8 p.m.
Monday, Nov. 30–9 a.m. to 8 p.m.

On Tuesday, Dec. 1, registration facilities will be set up in the French Room; it will be open from 8 a.m. to 12 noon.

MEETING PLACES

House of Delegates: Adolphus Hotel, 1321 Commerce St. (between Field and Akard Streets), Main Ball Room. House convenes 10 a.m., Tuesday, Dec. 1.

General Scientific Meetings: Dallas Memorial Auditorium, 717 S. Akard St. Opening General Meeting at 10 a.m., Tuesday, Dec. 1, in the Theater (Room 5, 2nd floor). The Scientific Program opens at 11 a.m., Tuesday, Dec. 1, and closes at 12 noon on Friday, Dec. 4.

Scientific Exhibit: Dallas Memorial Auditorium, auxiliary exhibit area (1st floor). Exhibits open at 8:30 a.m., Tuesday, Dec. 1, and close at 12 noon, Friday, Dec. 4.

Industrial Exhibit: Dallas Memorial Auditorium, main exhibit area (1st floor). Exhibits open at 8:30 a.m., Tuesday, Dec. 1, and close at 12 noon, Friday, Dec. 4.

Motion Pictures: Dallas Memorial Auditorium, Room 4 (2nd floor). Begins Tuesday, Dec. 1, and continues through Friday morning, Dec. 4.

Color Television: Dallas Memorial Auditorium, Room 5 (2nd floor). Begins Tuesday, Dec. 1, and continues through Friday morning, Dec. 4.

DALLAS HOTEL RESERVATIONS

If hotel accommodations have not yet been secured, it is suggested that the application form which may be found on advertising page of this issue of The Journal be filled in and sent directly to the A. M. A. Clinical Meeting Housing Bureau, 101 Commerce St., Dallas 1, Texas. Applications for hotel accommodations should not be sent to the American Medical Association office in Chicago as it delays receipt of the application by the A. M. A. Housing Bureau and its subsequent processing.

WOMAN'S AUXILIARY

The Woman's Auxiliary to the Texas Medical Association and to the Dallas County Medical Society will be hosts to the wives of physicians attending the Clinical Session of the American Medical Association in Dallas, December 1-4, 1959.

The Dallas County Auxiliary will be especially proud of this occasion since the first Medical Woman's Auxiliary in the nation was organized in Dallas in May, 1917.

A feature attraction will be the Educational Health Fair held in connection with the American Medical Association's December meeting in Dallas.

The information booths in the Dallas Memorial Auditorium, the Statler Hilton and Adolphus Hotels will be staffed by members of the Woman's Auxiliary to the Dallas County Medical Society. Complete details of Auxiliary activities and information will be available.

The following special events and attractions have been planned for visiting ladies, and they are cordially invited to attend:

Calendar of Scheduled Events

November 28—December 6

The Health Fair—An educational fair with many health exhibits sponsored by the Dallas County Medical Association will be located in the main arena on the first floor of the Dallas Memorial Auditorium.

December 1—Tuesday Evening

Concert by the Dallas Symphony Orchestra in the Memorial Auditorium Theatre. Complimentary tickets will be available at the registration desk.

December 2—Wednesday—12:30 p. m.

Grand Ballroom of the Statler-Hilton Hotel. Luncheon and Style Show by Neiman-Marcus honoring Dr. Louis Orr, President of the American Medical Association, and Mrs. Orr. Also honored will be Mrs. Frank Gastineau, President of the Woman's Auxiliary to the American Medical Association. Price of the luncheon—$3.75. Tickets will be available at all three information booths (Dallas Auditorium, Statler Hilton and Adolphus Hotels).

December 3—Thursday—10:00 to 12:00 noon

Guided tours of Southland Center. The 42 story Southland Tower is the tallest building west of the Mississippi River with the highest public observation deck and heliport. The tour will include a visit to the tower's "Chapel in the Sky" on the 39th floor. Tickets available at information booths.

THE SCIENTIFIC PROGRAM

DALLAS MEMORIAL AUDITORIUM

The Council on Scientific Assembly, in presenting the Scientific Program for the Dallas Clinical Meeting, wishes to call attention to the high caliber and broad interest of the material to be discussed. Physicians attending the meeting will find a wide choice of subjects. Lectures, symposiums, panel discussions, motion pictures, color television, a Trans-Atlantic Clinico-Pathological Conference, and the Scientific Exhibit will all take place in the Dallas Memorial Auditorium.

Color television will originate in Parkland Memorial Hospital and will be carried to the Auditorium by closed circuit. The Trans-Atlantic Conference will be conducted by a two-way telephone connection with the Glasgow Division of the British Medical Association on Thursday, Dec. 3, at 2:30 p. m. in Dallas and 8:30 p. m. in Glasgow.

Breakfast round tables will be held on Wednesday and Thursday mornings, Dec. 2 and 3, at 7:15 a. m. in the Baker Hotel. Each round table will be limited to 40 persons. Tickets will be available at $2.75 each, including the gratuity, as long as the supply lasts, in the Registration Area of the Auditorium.

A special première film showing will be held on Wednesday evening, Dec. 2, at 8:30 p. m. in the Crystal Ballroom of the Baker Hotel.

The Council on Scientific Assembly extends its appreciation to the Local Committee on Arrangements in Dallas for its initiative and painstaking care in preparing the program. Dr. Everett C. Fox, General Chairman of Arrangements; Dr. C. D. Bussey, Chairman of the Committee on Scientific Program; and Dr. John S. Chapman, Chairman of the Television Committee, have all been exceedingly active during the year. Others deserving mention include Dr. James A. Martin, Chairman, Scientific Exhibit Committee, and Dr. Don G. Harrel, who arranged the manikin demonstrations on problems of delivery. Mr. Millard J. Heath, Executive Secretary, *Dallas County Medical Society, has at all times been* most helpful.

Appreciation is also extended to Smith, Kline & French Laboratories, Philadelphia, for its part in the presentation of color television and the Trans-Atlantic Conference.

The program begins on Tuesday morning, Dec. 1, and continues until Friday noon, Dec. 4.

OPENING GENERAL ASSEMBLY: ROOM 5

Tuesday morning, Dec. 1

10:00

Presiding: Everett C. Fox, Dallas, General Chairman

Speakers:

Franklin W. Yeager, Corpus Christi, Texas.
President, Texas Medical Association.

Floyd A. Norman, Dallas.
President, Dallas County Medical Society.

Stanley P. Reimann, Philadelphia.
Chairman, Council on Scientific Assembly, American Medical Association.

Louis M. Orr, Orlando, Fla.
President, American Medical Association.

11:00

Presiding: C. D. Bussey, Dallas, Program Chairman

The Role of Medicine in the Space Age.
Hubertus Strughold, Professor of Space Medicine and Advisor for Research, School of Aviation Medicine, United States Air Force, Randolph Air Force Base, Texas.

LECTURES: ROOM 3

Tuesday afternoon, Dec. 1

Chairman: Don G. Harrel, Dallas.

1:30 Indications for Hysterectomy.
Willis H. Jondahl, Harlingen, Texas.

2:00 Endometriosis.
William P. Devereux, Dallas.

2:30 What Can Be Learned from a Dilatation and Curettage.
Buford Word, Birmingham, Ala.

3:00 The Irritable Female Bladder.
Maxwell Johnson, Tulsa, Okla.

3:30 Hydramnios and the Diagnosis of Congenital Anomalies in the Delivery Room.
Frank Moya and Virginia Apgar, New York.

4:00 Obstetrical Anesthesia and Analgesia.
Raymond Courtin, Dallas.

Wednesday morning, Dec. 2

Chairman: T. Haynes Harvill, Dallas.

9:00 Colloidal Isotopes in Treatment of Leukemia and Related Diseases.
Joseph M. Hill, Dallas.

9:30 The Natural History of Hypertensive Vascular Disease and Its Relation to Treatment.
James V. Warren, Galveston, Texas.

10:00 Esophagitis.
Arthur M. Olsen, Rochester, Minn.

10:30 *Newer Concepts of Metabolism of Bilirubin.*
William T. Foulk, Rochester, Minn.

11:00 Acute Renal Failure.
Walton R. Akenhead, New Orleans.

11:30 The Use and Misuse of Tranquilizers in Medical Practice.
Stewart Wolf, Oklahoma City.

Wednesday afternoon, Dec. 2

Chairman: Andrew B. Small, Dallas.

1:30 Surgical Approaches to the Treatment of Parkinson's Disease.
William W. McKinney, Fort Worth, Texas.

2:00 The Natural History of Pancreatitis.
John M. Howard, Philadelphia.

2:30 *The Acute Abdomen.*
Harwell Wilson, Memphis, Tenn.

3:00 The Physiological Basis for Treatment of Duodenal Ulcer.
N. C. Hightower Jr., Temple, Texas.

3:30 Incidence of Peptic Ulcer in Patients with Rheumatoid Arthritis and the Effect of Steroid Therapy.
Lloyd B. Bartholomew, Rochester, Minn.

4:00 Common Skin Diseases.
Harry L. Arnold Jr., Honolulu, Hawaii.

4:30 New Advances in the Treatment of Cardiac Arrhythmias.
Eliot Corday, Herbert Gold, and David Irving, Los Angeles.

Thursday morning, Dec. 3

Chairman: Edward L. Pratt, Dallas.

9:00 Trouble Spots in the Management of the Newborn.
Franklin C. Behrle, Kansas City, Kan.

9:30 Indications for Urological Appraisal in Children.
Henry Buchtel, Denver.

10:00 Immunizations: Routine, Special Cases, and the Future of Immunization.
Blair E. Batson, Jackson, Miss.

10:30 Practical Management of Children with Heart Murmurs.
Gladys J. Fashena, Dallas.

11:00 Children's Eyes—What a Practitioner Should Know About Strabismus, Injuries, Retrolental Fibroplasia and Vision Tests.
Tullos O. Coston, Oklahoma City.

11:30 The Recognition of Common Pediatric Orthopedic Conditions.
Edward T. Smith, Houston, Texas.

Thursday afternoon, Dec. 3

Chairman: Dan C. Gill, Dallas.

1:30 Conservative Treatment of Cystic Disease of the Female Breast.
John V. Goode, Dallas.

2:00 Adjuncts in Hernia Repair: Consideration of Basic Principles.
Francis C. Usher, Houston, Texas.

2:30 Athletic Injuries.
Don H. O'Donoghue, Oklahoma City.

3:00 Chemotherapy—Adjuvant to Cancer Surgery.
J. Samuel Binkley, Oklahoma City.

3:30 The Use of Tracheostomy in Lower Respiratory Disease.
Watts R. Webb, Jackson, Miss.

4:00 Complications of Diaphragmatic Hernia.
G. V. Brindley Jr., Temple, Texas.

4:30 Reliability of the Serum Amylase Determination.
Thomas F. Boyd, Boston.

Friday morning, Dec. 4

Chairman: Paul J. Thomas, Dallas.

9:00 Changes in the Bronchial Epithelium in Relationship to Cigarette Smoking and Lung Cancer.
Oscar Auerbach, East Orange, N. J., Arthur Purdy Stout, E. Cuyler Hammond, and Lawrence Garfinkel, New York.

9:30 Modern Resuscitation Techniques.
Peter Safar, Baltimore.

10:00 Prolonged Veno-Arterial Pumping for Circulation Support.
James F. Dickson III, and James Dow, Philadelphia.

10:30 Indications for Anticoagulants and Choice of Drugs.
James W. Culbertson, and Sherman H. Hoover, Memphis, Tenn.

11:00 Chemical and Radioactive Iodine Studies Following I-131 Therapy of Hyperthyroidism.
Joseph W. Goldzieher, Fred Hurd, and Jack Dominitz, San Antonio, Texas.

11:30 Hypercalcemia.
Donald W. Seldin, Dallas.

12:00 Bacterial Endocarditis.
Ralph Tompsett, Dallas.

SYMPOSIUMS: ROOM 1

Tuesday afternoon, Dec. 1

Chairman: Le Roy J. Kleinsasser, Dallas.

1:30-3:00

Symposium on Cerebrovascular Insufficiency

Clinical Considerations of Cerebrovascular Insufficiency.
C. H. Millikan, Rochester, Minn.

Carotid and Cerebral Angiography in Cerebrovascular Insufficiency.
John Whiteleather, Memphis, Tenn.

Surgical Considerations of Cerebrovascular Insufficiency.
Michael E. De Bakey, E. Stanley Crawford, and William S. Fields, Houston, Texas.

3:00-4:30

Symposium on Soft Tissue Injury.

The Lungs.
Byron H. Evans, Fresno, Calif.

The Liver.
Gordon Madding, San Mateo, Calif.

The Colon.
John A. Schilling, Oklahoma City.

The Upper and Lower Urinary Tract.
Harry Spence, Dallas.

Wednesday morning, Dec. 2

Chairman: Grady Reddick, Dallas.

9:00-10:30

Symposium on Whiplash Injury of the Neck

Orthopedist.
Bruce M. Cameron, Houston, Texas.

Neurosurgeon.
E. C. Schultz, Memphis, Tenn.

Physiatrist.
Donald L. Rose, Kansas City, Kan.

10:30-12:00

Symposium on Iatrogenic Disease

Induced by Rational Medication.
Jesse D. Rising, Kansas City, Kan.

Induced by Electrocardiogram.
E. Grey Dimond, Kansas City, Kan.

Induced by Surgery on the Gastrointestinal Tract.
Alvin J. Cummins, Memphis, Tenn.

Wednesday afternoon, Dec. 2

Chairman: J. Warner Duckett, Dallas.

1:30-3:00

Symposium on Intestinal Obstruction

Causes and Pathological Physiology.
J. F. McKenney, Temple, Texas.

Diagnosis.
Terrell Speed, Temple, Texas.

Surgical Treatment.
Raleigh R. White, Temple, Texas.

Symposium on Biliary Tract Surgery

The Differential Diagnosis of Jaundice.
Edward Storer, Memphis, Tenn.

Indications for Exploration of the Common Duct. The Retained Stone. Operative Choledochogram.
J. Cuthbert Owens, Denver.

The Sphincter of Oddi.
John Reynolds, Chicago.

Modern Roentgenographic Evaluation of the Biliary Tract.
Donald N. Dysart, Temple, Texas.

Thursday morning, Dec. 3

Chairman: John L. Goforth, Dallas.

9:00-10:30

Symposium on Newer Laboratory Procedures

Radioactive Triolein and Oleic Acid in Malabsorbtion States.
W. Crockett Chears, Dallas.

Abnormal Serum Proteins, Rheumatoid Factors, Le Phenomenon, Myeloma Proteins.
W. M. Mikkelsen, Ann Arbor, Mich.

The Use of Transaminase Determination in Hepatic and Cardiac Disease.
Felix Wroblewski, New York.

10:30-12:00

Symposium on Carcinoma of the Breast

Surgical Treatment.
Edward T. Krementz, New Orleans.

Chronic Cystic Mastitis and Carcinoma of the Breast.
Edward H. Soule, Rochester, Minn.

Mastastatic Disease.
Nylene E. Eckles, Houston, Texas.

Thursday afternoon, Dec. 3

Chairman: Henry M. Winans Sr., Dallas.

1:30-3:00

Symposium on Anemia

Anemia in Pregnancy.
Jack A. Pritchard, Dallas.

Anemia in Infection.
Charles C. Sprague, New Orleans.

Iron Deficiency Anemia.
Alfred P. Kraus, Memphis, Tenn.

3:00-5:00

Symposium on Problems with Antimicrobial Drugs

Untoward Reactions to Antimicrobial Drugs.
Ellard M. Yow, Houston, Texas.

Prophylactic Use of Antimicrobial Drugs.
Vernon Knight, Nashville, Tenn.

A Practical Program for Control of Staphylococcal Infections in Hospitals.
Ian Maclean Smith, Iowa City, Iowa.

Management of the Individual Patient with Staphylococcal Infection.
Joseph E. Geraci, Rochester, Minn.

Friday morning, Dec. 4

Chairman: Perry C. Talkington, Dallas.

9:00-10:30

Panel Discussion on Premarital and Marital Counseling
Oren R. Depp, New Orleans, Moderator.

Participants: Bertrand Y. Glassberg, St. Louis; John C. Montgomery, and Rev. Julius A. Fritze, Dallas.

10:30-12:00

Symposium on the Problem Child

Pre-Adolescent.
John G. Young, Dallas.

Adolescent.
Robert L. Stubblefield, Dallas.

Legal Aspects.
Judge Lewis F. Russell, Dallas.

PANEL DISCUSSIONS: ROOM 2

Tuesday afternoon, Dec. 1

Chairman: Elliott Mendenhall, Dallas.

1:30-3:00

Panel Discussion on the Treatment of Rheumatoid Arthritis.
W. Paul Holbrook, Tucson, Ariz., Moderator.

Participants: Charley J. Smyth, Denver; Morris Ziff, Dallas; and William S. Clark, New York.

3:00-4:30

Panel Discussion on Pulmonary Insufficiency.
Richard V. Ebert, Little Rock, Ark., Moderator.

Participants: Richard L. Riley, Baltimore; William F. Miller, Dallas; and Maurice S. Segal, Boston.

Wednesday morning, Dec. 2

Chairman: D. W. Carter Jr., Dallas.

9:00-10:30

Panel Discussion on the Treatment of Diabetes.
Randall G. Sprague, Rochester, Minn., Moderator.

Participants: Kelly M. West, Oklahoma City; Lillian Recant, St. Louis; and Leonard L. Madison, Dallas.

10:30-12:00

Panel Discussion on Infectious Diseases in Children.
Harris D. Riley Jr., Oklahoma City, Moderator.

Participants: Harriet M. Felton, Galveston, Texas, and Leo J. Geppert, Fort Sam Houston, Texas.

Wednesday afternoon, Dec. 2

Chairman: John S. Bagwell, Dallas.

1:30-3:00

Panel Discussion on Congestive Heart Failure.
James V. Warren, Galveston, Texas, Moderator.

Participants: Carleton B. Chapman, Dallas; Walton R. Akenhead, New Orleans; and E. Grey Dimond, Kansas City, Kan.

3:00-4:30

Panel Discussion on Non-Cancerous Medical and Surgical Disease of the Colon Including Preoperative Preparation.
J. Arnold Bargen, Rochester, Minn., Moderator.

Participants: Hyrum Reichman, Salt Lake City; Frank McGlone, Denver; and Edgar Jacob Poth, Galveston, Texas.

Thursday morning, Dec. 3

Chairman: Tom B. Bond, Fort Worth, Texas.

9:00-10:30

Panel Discussion on Gynecological Cancer.
John A. Wall, Houston, Texas, Moderator.

Participants: Phil C. Schreier, Memphis, Tenn.; Willis E. Brown, Little Rock, Ark.; and Juan A. del Regato, Colorado Springs, Colo.

10:30-12:00

Panel Discussion on Supervoltage Irradiation Therapy Today.
Jerry E. Miller, Dallas, Moderator.

Participants: Charles L. Martin, Dallas; Gilbert Fletcher, Houston, Texas; and Juan A del Regato, Colorado Springs, Colo.

Thursday afternoon, Dec. 3

Chairman: Oran V. Prejean, Dallas.

1:30-3:00

Panel Discussion on Obstetrical Emergencies.
Willis E. Brown, Little Rock, Ark., Moderator.

Participants: Arthur B. Lunin, Houston, Texas; Michael Newton, Jackson, Miss.; and John W. Records, Oklahoma City.

3:00-5:00

Panel Discussion on Treatment of Cancer of the Thyroid.
R. Lee Clark Jr., Houston, Texas, Moderator.

Participants: E. C. White, Mavis P. Kelsey, William O. Russell, Raymond G. Rose, and Lowell S. Miller, Houston, Texas.

MOTION PICTURES: ROOM 4

Following is a partial list of the motion pictures which will be shown daily:

Hospital Sepsis—A Communicable Disease.
American Medical Association, American College of Surgeons, and American Hospital Association.

Hospital Infection Control.
Brooke Army Medical Center, San Antonio, Texas.

Management of Breast Feeding.
Gordon D. Jensen, Seattle.

A Complete Office Gynecological Examination.
Frederick J. Hofmeister, Milwaukee.

Routine Pelvic Examination and Cytologic Method.
S. B. Gusberg, New York.

Total Hysterectomy.
Somers H. Sturgis, Boston.

Cardiac Arrest.
J. Beard, London.

Just 4 Minutes (Resuscitation for Cardiac Arrest).
Lenore R. Zohman, Valhalla, N. Y.

Acute Gallbladder Disease.
Allen Boyden, Portland, Ore.

Carcinoma of the Stomach: Gastrectomy.
Waltman Walters and William H. Re Mine, Rochester, Minn.

Cholecystectomy with Common Duct Exploration.
John B. Blalock, New Orleans.

Ocular Inflammation.
J. H. King Jr., Washington, D. C.

The Intraperitoneal Repair of Incisional Hernias with Marlex Mesh.
Francis C. Usher, Houston, Texas.

Use of Synthetic Knitted Mesh in Hernia Repair.
John R. Paine, Buffalo.

Physical Examination of the Newborn.
Mary B. Olney, San Francisco.

Management of Burns, Part I—Supportive Care.

Management of Burns, Part II—Local Care.
Department of the Army, Washington, D. C.

Radiation Hazards and Control in Diagnostic Radiology.
American College of Radiology.

Endoscopic Diagnosis of Certain Lesions of the Lower Bowel.
R. J. Jackman, Rochester, Minn.

The Early Detection and Medical Management of Ulcerative Colitis. Premiere Showing.
Nicholas C. Hightower, Jr., A. Comptom Boders, Jr., Henry Laurens, and Richard D. Haines, Temple, Texas.
Discussion by J. Arnold Bargen, Rochester, Minn.

Matter of Fact.
American Medical Association and American Bar Association.

PREMIERE FILM SHOWING BAKER HOTEL, CRYSTAL BALLROOM

Wednesday evening, Dec. 2

8:30 Rehabilitation Adds Life to Years.
Committee on Rehabilitation, American Medical Association.

Introductory remarks will be made by:
Louis M. Orr, President, American Medical Association.

Frank H. Krusen, Chairman, Committee on Rehabilitation, American Medical Association.

COLOR TELEVISION: ROOM 5

Tuesday afternoon, Dec. 1

2:00-4:00

Studies Preparatory to Heart Surgery.
Carleton B. Chapman, The University of Texas Southwestern Medical School, Dallas, Moderator.

Participants: Faoud Bashour, William F. Miller, and Richard Ernst, The University of Texas Southwestern Medical School, Dallas.

Demonstration of techniques and methods involved in location of cardiac abnormalities and in assessing the status of the circulation.

Wednesday morning, Dec. 2

10:00-12:00

Surgery—Operative Clinic.
Ben J. Wilson, The University of Texas Southwestern Medical School, Dallas, Moderator.

Participants: Jerry A. Stirman, The University of Texas Southwestern Medical School, Dallas.

Wednesday afternoon, Dec. 2

2:00-3:00

Neurosurgery.
William Kemp Clark, The University of Texas Southwestern Medical School, Dallas, Moderator.
Participants: Sven Eliasson, and Morris Sanders, The University of Texas Southwestern Medical School, Dallas.

3:00-4:00

Orthopedic Surgery.
Charles F. Gregory, The University of Texas Southwestern Medical School, Dallas, Moderator.
Participants: Louis H. Paradies and James H. Pollock, The University of Texas Southwestern Medical School, Dallas.

Demonstration of the use of various appliances, post immobilization care of injured limb, and treatment of strained joints.

Thursday morning, Dec. 3

10:00-12:00

Obstetrics—Operative Clinic.
Jack A. Pritchard, The University of Texas Southwestern Medical School, Dallas, Moderator.
Participants: Reuben H. Adams, Paul MacDonald, M. T. Jenkins, and William W. McCue, The University of Texas Southwestern Medical School, Dallas.

Friday morning, Dec. 4

10:00-11:00

Dermatology.
Bedford Shelmire Jr., The University of Texas Southwestern Medical School, Dallas, Moderator.
Participants: Coleman Jacobson, J. B. Howell, and D. Shelton Blair, The University of Texas Southwestern Medical School, Dallas.

Presentation of 10 cases of troublesome dermatological problems, presentation of tumors of the skin, and demonstration of office procedure.

11:00-12:00

Ophthalmology.
Carroll W. Browning and Jerome Byers, The University of Texas Southwestern Medical School, Dallas.

A demonstration of eye muscle imbalance problems, common external eye problems, and plastic surgery of the eye.

TRANS-ATLANTIC CLINICO-PATHOLOGICAL CONFERENCE: ROOM 5

Thursday, Dec. 3

American Medical Association Clinical Meeting, Dallas.
British Medical Association, Glasgow Division,
Glasgow, Scotland.
Presented in cooperation with Smith, Kline & French Laboratories, Philadelphia

2:30-3:30 p. m. (Central Standard Time)
8:30-9:30 p. m. (Greenwich Time)

American Medical Association Panel in Room 5, Dallas Memorial Auditorium.
John S. Chapman, The University of Texas Southwestern Medical School, Dallas, Moderator.
Pathologist: Charles T. Ashworth, The University of Texas Southwestern Medical School, Dallas.
Participants: James V. Warren, The University of Texas Medical Branch, Galveston, and Richard L. Riley, Johns Hopkins University Medical School, Baltimore.
British Medical Association, Glasgow Division, Panel in Glasgow, Scotland.

BREAKFAST ROUND TABLES: BAKER HOTEL

Ten breakfast round tables will be held in the Baker Hotel, five on Wednesday morning and five on Thursday morning. Attendance at each breakfast will be limited to 40 persons. Tickets will be available at $2.75 each including the gratuity, as long as the supply lasts, in the Registration Area in the Dallas Municipal Auditorium.

Following are the subjects to be discussed at each breakfast, the chairmen and the participants, and the place:

Wednesday morning, Dec. 2

7:15-8:45

1. **Diabetes: Newer Drugs and Research.**
   Chairman: James H. Herndon, Dallas.
   Participants: Randall G. Sprague, Rochester, Minn., and Lillian Recant, St. Louis.
   Baker Hotel, English Room.
2. **Diagnosis and Treatment of Non-Rheumatoid Arthritis.**
   Chairman: Richard A. Dathe, Dallas.
   Participants: W. Paul Holbrook, Tucson, Ariz.; William S. Clark, New York; and Charley J. Smyth, Denver.
   Baker Hotel, Tally-Ho Room.
3. **Air-Borne Infections.**
   Chairman: Robert R. Shaw, Dallas.
   Participants: Richard L. Riley, Baltimore, and Maurice S. Segal, Boston.
   Baker Hotel, Banquet Room No. 2.
4. **Metabolic Changes in the Injured and Burned Patient.**
   Chairman: Jerry Stirman, Dallas.
   Participants: John M. Howard, Philadelphia, and John A. Schilling, Oklahoma City.
   Baker Hotel, Banquet Room No. 4.
5. **Indications for and Choice of Diuretics.**
   Chairman: Alfred W. Harris, Dallas.
   Paricipant: Richard V. Ebert, Little Rock, Ark.
   Baker Hotel, Banquet Room No. 5.

Thursday morning, Dec. 3

7:15-8:45

6. **Severe and Unusual Infections.**
   Chairman: Ralph Tompsett, Dallas.
   Participants: Vernon Knight, Bethesda, Md., and Ellard M. Yow, Houston, Texas.
   Baker Hotel, English Room.
7. **Hepatitis.**
   Chairman: E. R. Hayes, Dallas.
   Participants: Felix Wroblewski, New York, and William T. Foulk, Rochester, Minn.
   Baker Hotel, Tally-Ho Room.
8. **Problems in Growth and Development.**
   Chairman: Floyd A. Norman, Dallas.
   Participants: Harris D. Riley Jr., Oklahoma City, and Blair E. Batson, Jackson, Miss.
   Baker Hotel, Banquet Room No. 2.
9. **The Management of Bladder Neck Obstruction in Children.**
   Chairman: Harry M. Spence, Dallas.
   Participant: Henry A. Buchtel, Denver.
   Baker Hotel, Banquet Room No. 4.
10. **Newer Methods in Anesthesiology.**
   Chairman: Oliver F. Bush, Dallas.
   Participant: Peter Safar, Baltimore.
   Baker Hotel, Banquet Room No. 5.

THE SCIENTIFIC EXHIBIT

The Scientific Exhibit will be located on the first floor of Dallas Memorial Auditorium, with access from the Industrial Exhibit, with the exception of two special features which will be presented in Room 6 on the second floor. These include manikin demonstrations on problems of delivery twice daily Tuesday through Thursday, and a symposium on sunlight and the skin which will be presented on Wednesday.

The Scientific Exhibit will open at 8:30 a. m. Tuesday, Dec. 1, and will close at 12:00 noon on Friday, Dec. 4.

PROBLEMS OF DELIVERY—MANIKIN DEMONSTRATIONS

Room 6, second floor.

Manikin demonstrations on problems of delivery will be conducted daily at 12:00 noon and 4:30 p. m., Tuesday through Thursday, by a group of Dallas obstetricians. An opportunity for questions and answers will follow each demonstration.

Don G. Harrel, Dallas, is in charge of the demonstrations. The following schedule will be presented:

Tuesday afternoon, Dec. 1

12:00 Forceps Delivery.
Oran V. Prejean, Dallas.
4:30 Delivery from Breech and Other Abnormal Presentations.
Charles H. Bruce, Dallas.

Wednesday afternoon, Dec. 2

12:00 Forceps Delivery.
William G. Langston, Dallas.
4:30 Delivery from Breech and Other Abnormal Presentations.
Asa A. Newsom Sr., Dallas.

Thursday afternoon, Dec. 3

12:00 Forceps Delivery.
Don G. Harrel, Dallas.
4:30 Delivery from Breech and Other Abnormal Presentations.
H. C. Henderson Jr., Dallas.

SYMPOSIUM ON SUNLIGHT AND THE SKIN

Wednesday, Dec. 2

Room 6, second floor.

A symposium on Sunlight and the Skin is presented by the Committee on Cosmetics of the American Medical Association in conjunction with an exhibit on this subject. The program follows:

9:00 a. m. Chairman: Stephen Rothman, Chicago.
Physical Factors in Sun Exposures.
Farrington Daniels Jr., Portland, Ore.
Experimental Photobiology.
Harold Blum, Princeton, N. J.
The Physiological and Pathological Changes in Sunburn and Suntan.
Allan L. Lorincz, Chicago.
Problems of Solar Hypersensitivity and Their Pathogenesis (Polymorphous Light Eruptions, Solar Urticaria, Photosensitization from Exogenous Sources, etc.).
Rudolf L. Baer, New York.
Discussion by Farrington Daniels Jr., Harold Blum, Allan L. Lorincz, and Rudolf L. Baer.

1:30 p. m. Chairman: Raymond R. Suskind, Cincinnati.
Diseases Aggravated by Sunlight (L.E., Porphyria); Therapeutic Benefits of Ultraviolet Light (Psoriasis, Atopic Dermatitis, Acne, etc.).
Kenneth H. Burdick, Cleveland.
The Sunlight Factor in Aging and Skin Cancer.
James B. Howell, Dallas.
The Prevention and Management of Harmful Effects Induced by Sunlight—Physical and Chemical Sunscreens.
John M. Knox, Houston, Texas.
The Use and Abuse of the Psoralens.
S. William Becker Jr., Chicago.
The Sun and Your Patients.
Discussion by Kenneth H. Burdick, James B. Howell, John M. Knox, and S. William Becker Jr.

SPECIAL EXHIBIT OF FRACTURES

Spaces 301-304

The Special Exhibit on Fractures is presented under the auspices of the following committee:

Ralph G. Carothers, Cincinnati, Chairman.
Harry B. Hall, Minneapolis.
Charles V. Heck, Chicago.

Continuous demonstrations will be conducted daily from 10 a. m. to 12 noon and from 2 to 4 p. m., Tuesday morning to Friday noon on the following subjects:

Fractures in Children.
Fractures of the Elbow.
Fractures of the Ankle.

Basic principles will be stressed and ample opportunity will be allowed for questions. Members of the committee will be present to discuss individual problems with visiting physicians. A pamphlet giving the essential features of the exhibit will be distributed. The following surgeons will assist the committee in the presentation of the exhibit:

Roy E. Brackin, Winnetka, Ill.
Warner D. Bundens Jr., Philadelphia.
David M. Cameron, El Paso, Texas.
Robert H. Cofield, Covington, Ky.
L. J. Cordrey, Cleveland.
Robert H. Denham Jr., South Bend, Ind.
Samuel H. Fraerman, Highland Park, Ill.
Robert T. Gallagher, Cincinnati.
Morris E. Goldman, Lewiston, Maine.
Kenneth T. Hubbard, Oak Park, Ill.
Richard H. Jones, Minneapolis.
Edward H. Juers, Red Wing, Minn.
William J. Kisiel, Springfield, Mass.
Andrew R. Mailer, Chicago.
William M. McMillan, Chicago.
Moore Moore Jr., Memphis, Tenn.
Jack Moshein, Beverly Hills, Calif.
Theodore Norley, West Palm Beach, Fla.
Frederick G. Rosendahl, Minneapolis.
Edmund T. Rumble Jr., Callicoon, N. Y.
Garland F. Smith, St. Louis.
William J. Stewart, Columbia, Mo.
Milton S. Thompson, San Antonio, Texas.
Franklin V. Wade, Flint, Mich.

HISTORY OF MEDICINE

Space 106

Texas Medical History.
William M. Crawford, Committee on Medical History, Texas Medical Association, Austin, Texas.

Space 108

History of Medical Education in the United States.

Walter S. Wiggins and Catherine Hayes, Council on Medical Education and Hospitals, American Medical Association, Chicago.

Space 109

Historic "Firsts" in Experimental Therapeutics.

Augustus Gibson, Charles E. Lyght, and *Marion J. Finkel,* Merck Sharp & Dohme Research Laboratories, Rahway, N. J., and West Point, Pa.

Space 110

"Old Doc," First Auto Test Driver.

Harold M. Camp, Theodore R. Van Dellen, and John A. Mirt, Illinois State Medical Society, Chicago.

ARTHRITIS AND RHEUMATISM

Space 202

Diagnosis and Treatment of Rheumatic Diseases.

Irvin F. Hermann, Kenneth M. Kron, Russell A. Del Toro, John Richards, and Richard T. Smith, Benjamin Franklin Clinic, Philadelphia.

Space 203

The Feet in Rheumatoid Arthritis.

John J. Calabro, Carlo Nosenzo, and Felix Traugott, Seton Hall College of Medicine and Jersey City Medical Center, Jersey City, N. J.

Space 213

Surgery of the Knee Joint in Chronic Arthritis.

Theodore A. Potter, Robert B. Brigham Hospital, Boston.

Space 204

Aortic Insufficiency and Aortitis Associated with Rheumatoid Spondylitis.

W. Robert Irby, Elam C. Toone Jr., Edwin L. Pierce, and Lester F. Belter, Medical College of Virginia, Richmond, Va.

Space 205

Gout and Blood Dyscrasias.

John H. Talbott and Donald M. Wilson, Buffalo General Hospital and University of Buffalo School of Medicine, Buffalo.

Space 206

Do You Have a Question, Doctor?

Donald F. Hill, Tucson, Ariz.; L. Maxwell Lockie, Buffalo; and John W. Sigler, Detroit.

Space 208

Action on Arthritis.

Ronald W. Lamont-Havers and Russell L. Cecil, Arthritis and Rheumatism Foundation, New York.

Space 209

Rheumatoid Spondylitis.

Thomas E. Weiss, William H. Schindel, Hurst B. Hatch, and Louis E. Tolbert Jr., Ochsner Clinic, New Orleans.

Space 210

The Latex Fixation Tests for Rheumatoid Arthritis.

Vol K. Philips and Norman O. Rothermich, Ohio *State University College of Medicine, Columbus,* Ohio.

Space 212

Corticosteroids in Rheumatoid Arthritis.

G. M. Wilson Jr., John W. Sigler, and Dwight C. Ensign, *Henry Ford Hospital, Detroit.*

Space 214

Reflex Neurovascular Dystrophy of the Extremities.

Otto Steinbrocker, Sidney S. Berkowitz, Mortimer E. Ehrlich, Harold Feinstein, Thomas G. Argyros, and Edoardo Guariglia, Hospital for Joint Diseases and Lenox Hill Hospital, New York.

CARDIOVASCULAR DISEASES

Space 306

Shock and Arrhythmias: Their Management.

Arthur Bernstein, Franklin Simon, Jerome Kaufman, Fred Cohen, Bernard Robins, and Edwin L. Rothfeld, Newark Beth Israel Hospital, Newark, N. J.

Space 309

The Management of Peripheral Arterial Insufficiency.

Saul S. Samuels and Herbert E. Shaftel, New York.

Space 310

Oral Digitalis Maintenance After Rapid Intravenous Digitalization.

Robert B. Crouch, Houston, Texas.

Space 311

Returning the Coronary Patient to Productivity.

Shepard Shapiro, New York.

Space 312

Treatment of Essential Hypertension (A Double-blind Study).

Raymond F. Grenfell, University of Mississippi School of Medicine, Jackson, Miss., and James G. Hilton, Marquette University School of Medicine, Milwaukee.

DIABETES

Space 314

Medroxyprogesterone: A Unique New Oral Progestin.

Harold L. Upjohn and Jacob C. Stucki, Medical and Research Divisions of the Upjohn Company, Kalamazoo, Mich.

Space 315

Combined Insulin-Tolbutamide Treatment of Maturity Onset Diabetes.

Sydney S. Lazarus and Bruno W. Volk, Isaac Albert Research Institute of the Jewish Chronic Disease Hospital, Brooklyn.

Space 317

Management of the Patient with Diabetes Mellitus: Sulfonylurea Drugs Alone and in Combination with Insulin.

Elaine P. Ralli, Roy C. Gumpel, and Sylvia Cruess, New York University-Bellevue Medical Center, New York.

DERMATOLOGY

Space 319

Treatment of Dermatoses with Intravenous 6-Methylprednisolone.

Lawrence C. Goldberg and Joel R. Barkoff, University of Cincinnati College of Medicine, Cincinnati.

Space 320

Griseofulvin in Ringworm Infections.

James Q. Gant Jr., Arnold Gould, and *Marc A. Weiner,* Washington, D. C.

Space 321

Triamcinolone Therapy in Dermatologic Disorders.

Saul Blau, Raul Fleischmajer, and *Norman B. Kanof,* New York University Postgraduate Medical School, New York.

Space 322

Fibrin Foam Injection Plus Dermabrasion in Treatment of Depressed Scars—5 Years Experience.

Arthur S. Spangler and Charles S. Keuper, Massachusetts General Hospital, Peter Bent Brigham Hospital *and Harvard Medical School, Boston.*

Space 323

Critical Evaluation of Topical Agents Using the Paired Comparison Method.

Frank W. Crowe, and Sheldon A. Walker, University of Oregon Medical School, Portland, Ore., and T. B. Fitzpatrick, Harvard Medical School, Boston.

Space 324
The Effects of the Sun on the Skin.
Veronica L. Conley, Committee on Cosmetics, American Medical Association, Chicago.

Space 325
Treatment of Disseminated Coccidioidomycosis with Amphotericin B.
Thomas H. Sternberg, Victor D. Newcomer, Edwin T. Wright, Earl G. McNall, Lloyd J. Sorensen, and Ronald M. Reisner, University of California Medical Center and Veterans Administration Center General Medical and Surgical Hospital, Los Angeles.

Space 326
Treatment of Secondary Infections of the Lower Extremities in Ambulatory Patients.
Reginald H. Farrar and Milton E. Ashur, Jersey City, N. J.

NEUROLOGY AND PSYCHIATRY

Space 402
Help and Hope for the Dystrophic Patient.
Ade T. Milhorat, Muscular Dystrophy Associations of America, Inc., New York.

Space 403
Effects of Phenothiazines in Chronic Psychotics Refractory to Previous Treatment.
Jackson A. Smith, Dorothy Christian, Avonell Rutherford, and H. C. Henderson, Nebraska Psyciatric Institute, Omaha.

Space 404
Recognition and Treatment of Depressions.
Frank J. Ayd Jr., Franklin Square Hospital, Baltimore.

Space 405
Management of Emotional Disorders in General Practice.
Blaine E. McLaughlin, Woman's Medical College of Pennsylvania, Philadelphia.

Space 406
Drugs in Emotional Disorders: Past and Present.
Leo E. Hollister, Veterans Administration Hospital, Palo Alto, Calif.

Space 407
Dual Approach to Patient Care.
Ross V. Parks and G. F. Moessner, Los Angeles.

Space 408
Facial Pain.
Arnold P. Friedman, Charles A. Carton, and Asao Hirano, Montefiore Hospital, New York.

Space 409
Alcoholism: Alcoholism Is Your Business.
Marvin A. Block, Buffalo, Committee on Alcoholism, American Medical Association.

Space 411
Management of Depression in General Medicine.
Joseph L. Bell, Hans Tauber, Albert Santy, and Frank Pulito, New York.

Space 413
Depression: Treatment with a New Monoamine Oxidase Inhibitor, Tranylcypromine.
H. P. MacCubbin and B. E. Roebuck, Winchester Memorial Hospital, Winchester, Va.

Space 414
Diagnosis and Treatment of Anxiety and Depression Reactions.
John C. Maerz, Howard G. Lee, and Harry H. Hunter, Oaks, Pa.

Space 415
Depression or Anxiety? A Common Diagnostic and Therapeutic Problem.
Milton M. Perloff and Leonard J. Levick, Philadelphia.

Space 416
Sublingual Ergotamine Therapy for Vascular Headache.
Lester S. Blumenthal and Marvin Fuchs, George Washington University Medical School, Washington, D. C.

Space 419
Acetazolamide in the Treatment of Epilepsy in Children.
Jean Holowach and Don L. Thurston, St. Louis.

Space 420
Cerebral Palsy: A Basic Approach to Successful Management.
Winthrop M. Phelps, Children's Rehabilitation Institute, Reisterstown, Md.

Space 421
The Family Physician's Responsibility to the Cerebral Palsied Patient.
Brewster S. Miller, United Cerebral Palsy Associations, Inc., New York.

DRUG THERAPY

Space 503
Sulfonamides New and Old: A Perspective.
William P. Boger, Norristown State Hospital, Norristown, Pa.

Space 504
Clinical Experience with a New Broncholytic Drug.
Edward Settel, Forest Hills Nursing and Rehabilitation Center, Forest Hills, N. Y.

Space 505
Iron Deficiency States: Treatment with Intramuscular Iron-Dextran.
Frank E. Kappen and Norman L. Mauroner, Willis-Knighton Clinic, Shreveport, La.

Space 506
Antineoplastic Effects of Fluoropyrimidines.
A. R. Curreri, C. Heidelberger, and F. J. Ansfield, University of Wisconsin School of Medicine, Madison, Wis., and R. Duschinsky and R. J. Schnitzer, Hoffmann-LaRoche Inc., Nutley, N. J.

Space 507
Comparison of Circulatory Effects of "Peripheral Vasodilators."
Walter Redisch, J. Murray Steele, and Kurt de Crinis, New York University College of Medicine, New York.

Space 508
Drug Action as Measured by Rotating Explants of Human Respiratory Epithelium.
Gunther Corssen, C. George Lefeber, Earl E. Pitsinger, and Charles R. Allen, University of Texas Medical Branch, Galveston, Texas.

Space 509
Inhibition of Cholesterol Synthesis.
Wilbur W. Oaks, Philip Lisan, and John H. Moyer, Hahnemann Medical College and Hospital, Philadelphia.

Space 510
Furaltadone—A New Peroral Antibacterial Agent.
James Neill Lysaught, Wesley Hospital Foundation, Oklahoma City.

Space 511
Pancreatic Enzymes.
Kenneth W. Thompson and R. T. Price, Organon Research Division, Orange, N. J.

Space 512
Buccal and Enteric Coated Trypsin: Clinical Study of 150 Cases.
John M. Coleman, Arkell M. Vaughn, C. M. Annan, and John A. Caserta, Stritch School of Medicine of Loyola University, Mercy and Cook County Hospitals, Chicago.

Space 513
Studies with the New Diuretics: A Comparison of the Electrolyte, Weight, and Water Loss in Humans.
A. Kahn and I. J. Greenblatt, Beth-el Hospital, Brooklyn.

Space 514
Comparative Pharmacology and Clinical Effectiveness of the Newer Diuretics.
Morton Fuchs, John H. Moyer, Sanford Mallin, and Benjamin Newman, Hahnemann Medical College and Hospital, Philadelphia.

Space 515
Demethylchlortetracycline (DMCT): A New Broad Spectrum Antibiotic Development, Chemistry, Pharmacology and Clinical Experience.
Stanton M. Hardy, W. M. Sweeney, A. C. Dornbush, J. M. Ruegsegger, J. R. D. McCormick, and N. O. Sjolander, Lederle Laboratories, Pearl River, N. Y.

Space 516
A New Analgesic in Acute and Chronic Pain.
Robert H. Yonemoto and Ralph L. Byron Jr., City of Hope Medical Center, Duarte, Calif.

Space 518
Identification Guide for Solid Dosage Forms.
Walter Wolman and Gordon Schrotenboer, Chemical Laboratory, American Medical Association, Chicago.

Space 521
Anti-inflammatory Adrenocorticoids.
Thomas H. McGavack and *Kung-Ying Tang Kao*, Veterans Administration Center, Martinsburg, W. Va.

SURGERY

Space 603
Tumors of the Parotid Gland: Their Surgical Management.
O. H. Beahrs, K. D. Devine, and L. B. Woolner, Mayo Clinic and Mayo Foundation, Rochester, Minn.

Space 604
Arterial Surgery for Arteriosclerotic Occlusions.
Dale J. Austin and Jesse E. Thompson, Dallas.

Space 605
A New Technique for the Repair of Incisional and Inguinal Hernias.
Francis C. Usher and John L. Ochsner, Baylor University College of Medicine, Houston, Texas.

Space 606
Esophageal Atresia of the Newborn.
E. R. Munnell, A. H. Bell, and C. M. Bielstein, Oklahoma City Clinic, Oklahoma City.

Space 608
Surgical Treatment of Bullous Emphysema.
Robert R. Shaw, Donald L. Paulson, and John L. Kee, Baylor University Medical School, Dallas.

Space 609
Surgical Aspects of Diaphragmatic Hernias.
Lawrence M. Shefts, San Antonio, Texas.

Space 610
What Is Your Diagnosis—A Clinic on Proctoscopy.
John McGivney, Marcel Patterson, Edward Lefeber, and Louis Field, *University of Texas Medical* Branch, Galveston, Texas.

Space 611
Complete and Continuous Parenteral Nutrition.
Carl O. Rice and J. H. Strickler, St. Barnabas Hospital, Minneapolis.

Space 613
Management of the Nephrotic Syndrome in Adults.
E. Lovell Becker, John T. Ellis, and David D. Thompson, The New York Hospital–Cornell Medical Center, New York.

Space 614
Newer Mechanisms of Constipation—and Their Control.
Samuel Weiss, Jerome Weiss, and Bernard Weiss, New York.

OPHTHALMOLOGY AND OTOLARYNGOLOGY

Space 615
Congenital Diseases of the Eye.
Everet H. Wood, Lovelace Clinic, Albuquerque, N. Mex.

Space 616
Secretory Otitis Media in Children.
C. F. Lake and R. L. J. Kennedy, Mayo Clinic and Mayo Foundation, Rochester, Minn.

Space 617
The Inflamed Eye.
Dan M. Gordon, Cornell Medical Center and New York Hospital, New York.

Space 618
Total Management of ENT Infections.
Joseph C. Elia, Reno, Nev.

RADIOLOGY

Space 703
Misleading Calcific Shadows in the Abdomen.
L. G. Bartholomew, J. C. Cain, G. D. Davis, and A. H. Bulbulian, Mayo Clinic and Mayo Foundation, Rochester, Minn.

Space 704
Diagnosis by Angiography in Patients with Stroke.
Robert A. Kuhn, All Souls Hospital, Morristown, N. J.

Space 706
Selective Visceral Arteriography.
Colvin H. Agnew, John Derrick, Robert N. Cooley, and Raymond Bermudez, *University* of Texas Medical Branch, Galveston, Texas.

Space 707
The Value of the Scintogram in the Diagnosis of Thyroid Disease.
J. Martin Miller, Melvin A. Block, and Raymond Mellinger, Henry Ford Hospital, Detroit.

Space 708
Positive Contrast Ventriculography.
McClure Wilson and S. R. Snodgrass, University of Texas Medical Branch, Galveston, Texas.

Space 710
Dosage Distributions for Various Loadings of the Ernst Cervical Radium Applicator.
Jack S. Krohmer, University of Texas Southwestern Medical School, Dallas.

PEDIATRICS

Space 711
Congenital Muscular Torticollis (Wryneck).
M. B. Coventry, L. E. Harris, and A. J. Bianco Jr., Mayo Clinic and Mayo Foundation, Rochester, Minn.

Space 712
Criteria for *Diagnosis of Some Congenital* Defects and Treatment of Some Complications of Therapy.
Lyon P. Strean, Joseph T. Ichter, and Eugene P. Leoni, Pennhurst State School, Spring City, Pa., and Hospital of the University of Pennsylvania, Philadelphia.

Space 713
Infections in Private Pediatric Practice: Rapid Diagnostic Susceptibility Tests and Prompt Antibiotic Therapy.
Frank M. Ripberger, Robert H. Anderson, and Richard E. Palmer, Alexandria Hospital, Alexandria, Va.

Space 714
Deaths in Children 48 Hours After Hospital Admission.
Thomas E. Reichelderfer, Robert L. Baird, Alphonse P. Palmieri, and Helen J. Ossofsky, Washington, D. C.

Space 715
Baby Feeding: Prolonged Intervals and Early Use of Solids.
Walter W. Sackett Jr., Doctors Hospital, Coral Gables, Fla.

PREVENTIVE MEDICINE

Space 717
Seven Paths to Fitness.
W. W. Bauer, W. W. Bolton, D. A. Dukelow, Fred V. Hein, and Wallace Ann Wesley, Department of Health Education, American Medical Association, Chicago.

Space 718
Nutrition Nonsense.
Philip L. White, Eugene H. Stevenson, and Mary Jane Kibler, and Sandra Brodie, Council on Foods and Nutrition, American Medical Association, Chicago.

Space 720
Western Equine and St. Louis Encephalitis in California: A Clinical Follow-up Study 1953.
Knox H. Finley, Stanford University School of Medicine, Stanford, Calif., and California State Department of Public Health, Berkeley, Calif.

Space 721
Who Has V.D.?
William J. Brown, Venereal Disease Branch, Communicable Disease Center, U. S. Public Health Service, Atlanta, Ga.

Space 722
Epidemiological Study of Infectious Syphilis.
John M. Knox, John A. Soquel, William O. Hosking, C. Hunter Montgomery, and Fred K. Laurentz, Venereal Disease Clinic, City of Houston Health Department, Houston, Texas.

Space 723
Prolonged Release Agents in the Treatment of Obesity.
Burton M. Cohen, Elizabeth, N. J.

Space 724
The Changing Polio Picture.
Thomas M. Rivers, The National Foundation, New York.

OBSTETRICS AND GYNECOLOGY

Space 803
The Psychic Factor in Prenatal Symptomatology.
Henry A. Belafsky, Samuel Breslow, Jack E. Shangold, and Leonard M. Hirsch, Perth Amboy, N. J.

Space 804
Surgical Complications of Pregnancy.
Frederick H. Falls and Charlotte S. Holt, Illinois State Department of Public Health, Chicago.

Space 805
The Treatment of Threatened Abortion.
Herschel S. Murphy, Roselle, N. J.; Ernest C. Lowenstein, Rahway, N. J.; Floyd D. Gindhart, Trenton, N. J.; Archibald K. Maness, Greensboro, N. C.; Harry T. McFarland, Cincinnati; and Edward R. Farrage, Council Bluffs, Iowa.

Space 806
Dysmenorrhea—Cramps or Psyche?
Dennis M. Voulgaris, Gulf Coast Medical Foundation and Rugeley and Blasingame Clinic, Wharton, Texas.

Space 808
A Vaginal Lytic Agent.
Richard X. Sands, St. Luke's Hospital—Woman's Hospital Division, New York.

Space 809
Iron Therapy in Pregnancy.
Fred B. Hapke and Jack L. Staur, Ohio State University Health Center, Columbus, Ohio.

MISCELLANEOUS SUBJECTS

Space 811
Rehabilitation of the Cancer Patient.
Roald N. Grant and H. A. Press, American Cancer Society, New York.

Space 812
Smoking and Lung Cancer.
Lewis C. Robbins, Cancer Control Program, Public Health Service, Department of Health, Education, and Welfare, Washington, D. C.

Space 813
Tobacco and Health—Research Program of the Tobacco Industry Research Committee.
Robert C. Hockett, Tobacco Industry Research Committee, New York.

Space 814
Cancer in Texas Today.
Charles Phillips, Committee on Cancer, Texas Medical Association, Austin, Texas.

Space 815
Acute Intermittent Porphyria.
D. A. Malooly, W. N. Powell, N. C. Hightower Jr., R. D. Haines, and J. D. Ibarra, Scott and White Clinic, Temple, Texas.

Space 816
The Diagnostic Uses of Cholecystokinin in Biliary Tract Disease.
W. Crockett Chears Jr., Milford O. Rouse, Cecil O. Patterson, Herbert A. Bailey, F. Clark Douglas, and John W. Fisher, Dallas.

Space 817
Sarcoidosis in Texas.
Harry E. Sarles, August R. Remmers, and Norman L. Renfro, University of Texas Medical Branch, Galveston, Texas.

Space 818
Gastrografin in Gastroenterologic Diagnosis.
F. Clark Douglas and Herbert A. Bailey, Dallas.

Space 819
National Clearing House Program—American Association of Blood Banks.
William P. Murphy Jr., American Association of Blood Banks, Miami, Fla.

Space 820
American National Red Cross Blood Programs.
Sam T. Gibson, The American National Red Cross, Washington, D. C.

Space 821
Hospital Services Tailored to Meet Patient Needs.

Space 822
Fundamentals in the Management of Asthma.
Henry D. Ogden, New Orleans and Marvin Fuchs, Washington, D. C.

Space 824
Group Medical Practice.
George W. Cooley, Council on Medical Service, American Medical Association, Chicago.

Space 825
The Educational Council for Foreign Medical Graduates.
Ruth E. Burrows, Educational Council for Foreign Medical Graduates, Evanston, Ill.

Space 826
American Society of Internal Medicine.
Clyde C. Greene Jr., American Society of Internal Medicine, San Francisco.

THE INDUSTRIAL EXHIBITION

13th A. M. A. Clinical Meeting

Dec. 1-4, 1959 • Dallas Memorial

The Industrial Exhibits at the Dallas Meeting will provide a quick review of the new developments in medicine.

The visiting physician will have an excellent opportunity to examine new ideas and new methods—as well as to review familiar products and new applications that have been developed.

From Tuesday to Friday, Dec. 1 to 4, in Dallas, 150 industrial exhibitors will put the newest developments in the field of medicine on parade for you. With ease and at your convenience you may pick and choose what is useful in your practice. Well-trained representatives of each company will answer your most technical questions and help in every way to make your practice of medicine more effective and efficient.

The Industrial Exhibits will be open from 8:30 a. m. to 5:30 p. m. each day of the meeting, closing Friday at 12 noon. For your convenience all features of the Dallas meeting are under the same roof. The Scientific Exhibits, Industrial Exhibits, Clinical Discussions, Color Television, and Medical Motion Pictures are placed within a few hundred feet of one another.

We look forward to seeing you in Dallas and to your making full use of the values the Industrial Exhibits offer you.

JOHN L. MURPHY
Advertising Manager and Manager of Industrial Exhibition

REPORTS OF OFFICERS

REPORT OF BOARD OF TRUSTEES

To the Members of the House of Delegates of the American Medical Association:

The following annual report of the Board of Trustees is respectfully submitted:

From July 1, 1958, to June 30, 1959, the Board held five meetings in addition to those held during the Annual and Clinical Meetings of the Association.

The composition of the Board changed during this period. The death of Dr. Warren W. Furey in November, 1958, necessitated an interim appointment. In December, 1958, therefore, the Board selected Dr. W. Linwood Ball, Vice-president, to serve as Trustee until the next meeting of the House of Delegates. In June, 1959, Dr. Percy E. Hopkins was elected to fill the unexpired term of Dr. Furey, and Drs. R. B. Robins and Hugh H. Hussey Jr. were re-elected for terms of five years. Dr. E. Vincent Askey, by virtue of his election as President-elect, also became a member of the Board in June, 1959.

At its organizational meeting, June 11, 1959, the Board elected Dr. Leonard W. Larson, Chairman; Dr. Julian P. Price, Vice-chairman; Dr. Hugh H. Hussey Jr., Secretary, and Dr. Raymond M. McKeown, Secretary-Treasurer of the Association. Dr. Cleon A. Nafe serves as the elected member of the Executive Committee of the Board.

During this report period the Board divided itself into three committees: the Committee on Scientific Activities, the Committee on Socio-Economic Activities, and the Committee on Miscellaneous Activities. The objective of these committees is to review the current programs of all committees and councils of the Association.

A report regarding the establishment of these committees was made to the House of Delegates in June, 1959.

Annual and Clinical Meetings

Policies.—At its meeting in November, 1958, the Board reviewed its present policies and practices concerning arrangements for the annual and clinical meetings and adopted, in December, 1958, a set of policies for the guidance of the staff. Adoption of these guides has improved our liaison with medical groups, hotels, exhibitors, and others.

Centennials.—In order to permit several of the Scientific Sections to arrange centennial programs in 1959 at the Atlantic City meeting, sufficient funds were appropriated by the Board so that distinguished guests could be invited to participate.

Meeting Dates.—The following places and dates have previously been approved for annual and clinical meetings of the Association:

Annual Meetings: 1960—Miami Beach, June 13-17
1961—New York, June 26-30
1962—Chicago, June 11-15

Clinical Meetings: 1960—Washington, D. C., Nov. 29-Dec. 2
1961—Denver, Nov. 28-Dec. 1
1962—Los Angeles, Nov. 26-30

General Chairmen.—On nomination by the local medical society, the following General Chairmen of the Local Committee on Arrangements have been chosen as indicated:

Annual Meetings:
1960—Miami Beach, Dr. Reuben Chrisman, Dr. Homer Pearson } *Co-chairmen*
1961—New York, Dr. William L. Wheeler
Clinical Meetings:
1960—Washington, D. C., Dr. Donald L. Stubbs
1961—Denver, Dr. William Condon

A. M. A. Affiliations

The American Medical Association continues its membership in the Joint Blood Council, Inc.; Joint Commission on Accreditation of Hospitals; Blue Shield Commission; World Medical Association; U. S. Chamber of Commerce, and others.

The Bylaws of the Joint Commission on Accreditation of Hospitals (following the withdrawal of the Canadian Medical Association) were amended to provide that the American Medical Association have seven representatives on the Board of Commissioners. The Board appointed Dr. Hugh Carmichael to the additional position.

The Board voted to rejoin the National Health Council as a member, and appointed Drs. Cleon Nafe, W. Linwood Ball, and Ernest B. Howard as American Medical Association delegates.

The Board also accepted membership on the Advisory Council on Medical Education, and designated Dr. Leland S. McKittrick, Chairman of the Council on Medical Education and Hospitals, or his designated alternate to serve as the A. M. A. representative.

Dr. Frederick C. Swartz was appointed an A. M. A. representative on the Joint Council to Improve the Health Care of the Aged. The representatives are now Dr. Swartz, the President-elect and the Executive Vice-president.

Liaison Activities

Liaison committees have been appointed to meet with similar committees of the American Nurses' Association, American College of Surgeons, the Association of American Medical Colleges, the American Hospital Association, Pharmaceutical Manufacturers Association, American Pharmaceutical Association, National Association of Retail Druggists, American Bar Association, Association of State and Territorial Health Officers, Inter-Association Committee on Health, and Health Insurance Council.

The Board has cooperated with the College of American Pathologists in the revision of its Code of Procedures and Ethics Relating to Autopsies; has approved collaboration with the American Child Guidance Foundation in its 1960 program; and is assisting the Junior Chamber of Commerce in its health program activities.

Several members of the Board are members of the Medical Advisory Board of the Sears Roebuck Foundation.

In June, 1959, the National Fund for Medical Education appointed Dr. McKittrick to its Advisory Council.

The A. M. A.-A. H. A. Joint Medicolegal Education Committee was first established in 1957 with the American Hospital Association in an effort to devise an effective in-hospital medical professional liability prevention program. The name was recently changed to indicate the medicolegal education nature of its work.

Representatives

On appointment by the Board, several of the Trustees and others attended or participated in the programs of the following associations during the report period:

British Medical Association and Canadian Medical Association Joint Meeting—Dr. Sigurd Gundersen.

World Health Organization—Dr. Leonard W. Larson, as member of U. S. delegation to World Health Assembly, and Dr. Walter B. Martin, as member of the Expert Committee on Medical Care.

International Seminars, Inc.—Dr. F. S. Crockett on a study tour in South America.

National League for Nursing—Drs. Maurice Hoeltgen and Julian P. Price as representatives on the Committee on Nursing of the NLN.

Advisory Board for Medical Specialties—two members of the Council on Medical Education and Hospitals.

Blue Shield Commission—Drs. George Fister, David B. Allman, and Dwight Murray.

Publications

Specialty Journals.—The Board reviewed: (*a*) purposes and objectives of the specialty journals; (*b*) programs of the journals in relation to the over-all program of the A. M. A. in the scientific area; (*c*) groups to which the circulation of the journals should be directed; and (*d*) functions of the editorial boards; and established the following policies:

(1) That a committee of the Board meet with the Chief Editors at least once every year;

(2) That nominations for membership on the editorial boards may be received from the editorial board, through the Chief Editor, appropriate specialty societies, or any other fruitful source;

(3) That editorial co-sponsorship by specialty organizations of the A. M. A. specialty journals be approved in principle, including representation on the editorial boards from the specialty groups with whom the affiliation is established;

(4) That members of the editorial boards be appointed for terms of two years, retroactive to January, 1953, so arranged that the terms of one-half of the membership expire in one year and the other half the following year, with a maximum of five consecutive terms;

(5) That the Chief Editor be appointed for terms of two years, with reconsideration at the end of each two years, but with a maximum of five consecutive terms as Chief Editor;

(6) That the above policy with reference to two-year terms for members of editorial boards will become effective January, 1960, but that not more than three retiring members shall be removed in any one year.

At its meeting in Atlantic City the Board recommended that (1) in addition to THE JOURNAL of the American Medical Association, each dues-paying member may receive a specialty journal of his choice as a benefit of membership and that (2) the prime objective of the specialty journal shall be the publication of scientific information for the field of interest of that journal. This recommendation has since been carried out.

A report on the above recommendations was presented to the House of Delegates at its meeting in Atlantic City (supplementary report J).

Quarterly Cumulative Index Medicus.—Negotiations were completed for a joint project of the American Medical Association and the National Library of Medicine, to be initiated in January, 1960. The National Library of Medicine will index the significant journals, and the A. M. A. will publish a cumulated index once a year. This action made it unnecessary to continue the current Quarterly Cumulative Index Medicus, which had been published by the A. M. A. for many years. A report on this action of the Board also was reported to the House in Atlantic City in June (supplementary report J).

A. M. A. Archives of Neurology and Psychiatry.—The Board after considerable discussion with various individuals and groups, voted that the *A. M. A. Archives of Neurology and Psychiatry* be divided into two periodicals, the *Archives of General Psychiatry* and the *Archives of Neurology,* to be devoted to clinical neurology as well as the wider aspects of the field. The first issue of the two new periodicals was July, 1959.

Committees of the Board

Appointments.—The Board appointed an *ad hoc* advisory committee to review the present scientific programs staffed by the Division of Scientific Activities, including their history, present status, and probable future, for the purpose of determining their effectivenes and recommending their future course. A two and one-half day meeting of this committee at Hershey, Pa., is planned in September, 1959.

Terms of Service.—In February, 1959, the Board adopted the following policies for its Standing Councils and Committees:

(1) That the term of service be one year subject to reappointment for a maximum of 10 years, retroactive to Jan. 1, 1953;

(2) That the membership be "frozen" for the remainder of the year 1959;

(3) That a panel of competent eligible individuals be developed, who could serve on a committee or council effectively; that such panel be derived from the committee or council concerned, state and county societies, and other sources.

The Board hopes to put these new rules into effect by Jan. 1, 1960.

Reports.—Reports from several of the ad hoc committees of the Board were submitted at the June, 1959, meeting of the House of Delegates. They were:

Committee on Amphetamines and Athletics
(supplementary report I)
Committee on Preparation for General Practice
(Handbook and THE JOURNAL [170:681-684 (June 6) 1959])
Commission on Medical Care Plans
(submitted in December, 1958; acted on by the House in June, 1959)
Joint Committee to Study Paramedical Areas in Relation to Medicine
(supplementary report E)
Medical Disciplinary Committee
(supplementary report H)
Committee on Nursing
(supplementary report D)
Joint A. M. A.-American Bar Association Committee on Narcotic Drugs
(supplementary report G)
A. M. A.-American Hospital Association Medicolegal Education Committee
(supplementary report F)

Annual reports herewith submitted from other *ad hoc* committees of the Board are as follows:

Committee on Medical Aspects of Automobile Injuries and Deaths
Committee on Medical Aspects of Sports
Committee on Medical Rating of Physical Impairment
Committee on Relationships Between Medicine and Allied Health Agencies
Joint Committee on Health Problems in Education of National Education Association and American Medical Association

Committee on Medical Aspects of Automobile Injuries and Deaths.—The major report of the Committee, "Medical Guide in Determining Fitness to Drive a Motor Vehicle" was published in THE JOURNAL (169:1195-1707 [March 14] 1959) and reprinted for distribution.

The American Association of Motor Vehicle Administrators requested A. M. A. cooperation in developing medical standards for driver licensing and in evaluating present standards. The Committee was assigned to represent the A. M. A. Work has started on guides to licensing authorities. These guides include a medical history, a screening physical examination for driver license applicants for administration by lay examiners, and an examination to be given by physicians to those applicants not passing the screening examination.

Staff Activities.—The Secretary staffed the exhibit "Physician's Responsibility in Highway Accidents" at meetings of the Ohio State Medical Association, the Illinois State Medical Society, and the American Medical Association.

The Secretary assisted in the preparation of statements to the Council on Legislative Activities in regard to proposed federal legislation on motor vehicle safety.

The report of the Committee "Medical Guide for Physicians in Determining Fitness to Drive a Motor Vehicle" was reprinted. The Secretary has devoted much staff time in replying to requests for the publication and in answering inquiries concerning the medical aspects of automobile injuries and deaths.

Committee on Medical Aspects of Sports.—The Committee on the Medical Aspects of Sports of the American Medical Association (formerly the Committee on Injury in Sports) was appointed by the Board of Trustees in 1956 at the suggestion of various athletic groups. Chief purpose of the Committee is to advise such groups on the health aspects of athletics including the prevention and control of athletic injuries. Because of its broader interests and the desire for positive approaches to the injury problem the Committee was renamed, as indicated above, by the Board of Trustees in June, 1959.

Present membership of the Committee is as follows: Allen J. Ryan, M.D., Chairman; Carl E. Badgley, M.D.; Harold P. Muller, M.D.; Francis Murphey, M.D.; Owen B. Murphy, M.D.; William D. Paul, M.D.; Thomas B. Quigley, M.D.; Augustus Thorndike, M.D., and Fred V. Hein, Ph.D., is Staff Secretary.

Actions and contributions of members in the development and carrying out of Committee functions are given below (some of these contributions are of an individual nature made by one member; others involve general action and service by all of the members):

(1) Reviewed records and statistics on head injuries in football and the possible relation of these injuries to the need for improvement of football helmets. The Committee also heard reports on research done on helmets and consulted with manufacturers concerning these. Some members (those working directly with footballs squads) are now using improved models and attempting to appraise the new types.

(2) Set up liaison with the Committee on Injury and Safety in Sports of the National Collegiate Athletic Association through the inclusion on the N. C. A. A. Committee of one of the members of the A. M. A. Committee on the Medical Aspects of Sports. (At the present time Dr. Allan J. Ryan, Chairman of A. M. A.'s Committee, holds the liaison membership.)

(3) Submitted ideas for, recommended the development of, and reviewed for publication the following items:

(*a*) "Protecting the Health of the High School Athlete," outlining ways in which schools and local medical societies can work together to assure proper health supervision of athletes.

(*b*) "The Bill of Rights for the College Athlete," stressing the importance of careful coaching, good officiating, right equipment, and proper medical care in the prevention of injuries.

(*c*) A series of pertinent short statements on various aspects of health and safety in athletics for promulgation to high schools. (Examples—"The All-American Diet," "Sleep and Sports," "First-Aid Recommendations".)

(*d*) "Safeguarding the Health of the High School Athlete," a checklist for appraising the health aspects of the high school athletic program.

(*e*) "Tips on Athletic Training," a compendium of statements on matters of conditioning and health practices in the field of sports.

(4) Cooperated with the Section on Orthopedic Surgery in the development of a symposium covering the medical aspects of sports at the June, 1959, Atlantic City Annual A. M. A. meeting.

(5) Participated as speakers in a number of postgraduate courses and conferences on the control of athletic injuries and other phases of sports medicine.

(6) Made suggestions, located speakers, recommended program participants in connection with the projected National Conference on the Medical Aspects of Sports to be sponsored by the American Medical Association under the auspices of the Committee at Dallas, Texas, immediately preceding the Clinical meeting, Nov. 30, 1959.

(7) Served as liaison and prepared articles and presentations for such organizations as the American College of Surgeons, American College of Sports Medicine, Pan-American Sports Congress, and other groups having similar committees and/or interests.

The Staff Secretary, in addition to his other duties as consultant in health and fitness for the Department of Health Education, aided the Committee in the implementation of the above plans and program in the following ways:

(*a*) Provided the detail work essential to the preparation and publication of Committee statements, recommendations, and pamphlets.

(*b*) Made arrangements with appropriate officials for joint activity with such groups as the National Federation of State High School Athletic Associations, the National Collegiate Athletic Association, and the National Association of Intercollegiate Athletics.

(*c*) Worked out methods for publicizing and disseminating materials prepared by the Committee including announcements of availability in appropriate medical and educational periodicals.

(*d*) Made mechanical arrangements for meetings of the Committee including the projected National Conference on the Medical Aspects of Sports at Dallas, Nov. 30, 1959.

(*e*) Carried on the necessary correspondence for the Committee, prepared its minutes and reports and otherwise performed the usual and expected duties of a secretary.

Committee on Medical Rating of Physical Impairment.—The Committee on Medical Rating of Physical Impairment is an *ad hoc* committee of the Board of Trustees. Its members are: Raymond M. McKeown, Chairman, George F. Gsell, Henry H. Kessler, Quentin W. Mack, and O. A. Sander. Mr. George W. Cooley and Mrs. Mary Van De Warker serve the Committee as staff members, and Mrs. Marjorie W. Grigsby as consultant.

The Committee was appointed by the Board of Trustees in 1956 and held its first meeting in December of that year. Its purposes are: (1) the establishment of guides to the evaluation (rating) of permanent impairment for use by the medical profession; and (2) liaison with the Bureau of Old-Age and Survivors Insurance (BOASI) and its Medical Advisory Committee (MAC) on medical matters under the BOASI program for the disabled.

The Committee met twice last year, once in Chicago and once in Boston. Additionally, individual members and/or consultants have met with the staff 18 times to work on specific assignments.

The majority of these meetings has been in connection with the development of further guides. The Committee currently uses two procedures for this purpose. Under either procedure, however, certain preliminary work is always required in the preparation of the original draft of any guide. This preliminary work requires a number of meetings of the individuals responsible for preparing the original draft at which they first review all pertinent literature and explore the problems inherent in rating impairment of the particular body system under consideration. Then, as the meetings progress, written material, based on the discussions, evolves. The final step involves careful and often numerous revisions by the responsible individuals until a suitable original draft is completed. For these reasons both individual meetings and the entire series of meetings are often protracted.

Under the first procedure established by the Committee for the development of a guide, certain members of the Committee prepare the original draft. This draft is then sent for prior review, with an explanation of the Committee's basic philosophy and responsibilities, to a group of specialists selected by the Committee as consultants. The consultants then meet with the originators of the draft and make any suggestions for its revision. Those suggestions compatible with the Committee's aims are then incorporated in the final draft of the guide which is submitted to the Committee for consideration.

Under the second procedure, the Committee appoints specialists in a given field to prepare the original draft under the chairmanship of a member of the Committee who has been appointed by the Committee as a whole. The original draft is then submitted to a group of consultants selected by the Committee. The meeting of the two groups, revision of the original draft, and submission of the final draft to the Committee is arranged as outlined under the first procedure.

Upon approval of the newly developed guide by the Committee, it is sent to the Board of Trustees for action. Upon approval by the Board and prior to publication, the guide is again referred to each consultant for consideration. He is asked to indicate to the Committee in writing whether or not he wishes his name listed as a consultant in the published guide.

To date, two guides have been published, a third is completed and three others are in preparation.

The first guide (on the extremities and back) was prepared under the first procedure. Two members of the Committee, Dr. Kessler and Dr. Mack, prepared the original draft which was submitted to the following consultants, all of whom are listed in the guide: Frank H. Krusen, Earl D. McBride, Carl O. Rice, Chester C. Schneider, Earl C. Steele, and Julian H. Bigelow, Ph.D., Joseph E. Markee, Ph.D., and Mr. James J. Reid. This 112-page guide was published as the first Special Edition of The Journal of the American Medical Association on Feb. 15, 1958. Since its publication the Committee has received over 6,000 requests for 18,000 copies from the 50 states, Puerto Rico, and 28 foreign countries. The response to the guide was most encouraging; hundreds of requests contained favorable comment. Less than a dozen letters have been received expressing dissatisfaction with one or more aspects of the guide, and in most cases constructive suggestions were made on ways to eliminate the objections.

Publication of the first guide has also brought a number of requests for members of the Committee to speak at meetings of medical and interested lay groups such as the International Association of Industrial Accident Boards and Commissions, and the American Railroad Association. Committee members have endeavored to fill as many of these requests as possible.

At the 1958 Annual Meeting, however, it became apparent that certain differences of opinion existed between the American Academy of Orthopedic Surgeons and the Committee. These differences appear to stem for the most part from the philosophical concepts expressed in the first guide. After some discussion it was agreed that it would be advantageous for a committee of the American Academy of Orthopedic Surgeons to study the guide and to make recommendations to be considered by the Committee in making any revision. Such a committee has been appointed and plans to meet this fall under the chairmanship of Dr. Earl D. McBride. A member of the Committee on Medical Rating, Dr. Kessler, has accepted an invitation to serve on this committee of the American Academy of Orthopedic Surgeons.

The second guide (on the visual system) was prepared under a modification of the first procedure because of existing A. M. A. reports. A Committee member, Dr. Gsell, conferred with the following consultants, appointed by the Committee and all of whom are listed in the guide: Ralph W. Danielson, Charles E. Jaeckle, and Harold Scheie. This guide was published as a Special Article in the Sept. 27, 1959, issue of The Journal of the American Medical Association. Since its publication 2,400 requests for 4,600 reprints have been received from the 50 states, Puerto Rico, and 9 foreign countries, including one behind the iron curtain. There have been many favorable comments and no dissatisfaction expressed to the Committee.

The third guide (on the cardiovascular system) was prepared under the second procedure established by the Committee and will be submitted to the Board for consideration.

In accordance with its second procedure, the Committee appointed one of its members, Dr. Kessler, as chairman and also appointed the following specialists to develop the original draft of the cardiovascular guide: Richard J. Clark, William A. Leff, Leonard J. Goldwater, and James V. Warren. After five meetings during the first year, the original draft was completed. It consisted of three sections: (1) organic heart disease; (2) hypertensive vascular disease; and (3) peripheral vascular disease. In the past year the original draft was submitted to the following consultants selected by the Committee: David I. Abramson, Edward F. Bland, Lewis Bronstein, S. Charles Franco, Hugh Montgomery, Jack Myers, Thomas W. Parkin, Oglesby Paul, Donal R. Sparkman, W. D. Stroud, and J. Allen Yager.

At the meeting with the consultants, the first two sections were found to be generally acceptable but it was felt that the third secion (peripheral vascular disease) needed further development. Dr. Warren, who had been responsible for this section, then met with Dr. Abramson and Dr. Montgomery to expand this material. After several meetings this section was completed and incorporated in the final draft of the guide which has been approved by the Committee.

The cardiovascular guide presented problems which had not been encountered previously by the Committee and were in urgent need of resolution. The chief difficulty arose from the lack of recognized standards except for the American Heart Association's functional and therapeutic classification and for grading retinopathy. This guide is, then, a first effort of its kind to enable all physicians to evaluate impairment competently without undue recourse to highly specialized and sometimes unavailable function tests.

In December, 1956, work on the pulmonary guide was begun. Under the chairmanship of a Committee member, Dr. Sander, the following specialists are preparing the original draft: Edgar Mayer, J. Burns Amberson, and George Wright. From the beginning this group has encountered difficulties arising from the nature and multiplicity of pulmonary disturbances, their sequelae, and of function tests. Concurrent obligations of the individuals involved have also made the arrangement of meetings difficult. Despite these problems, the group has worked earnestly to produce a suitable original draft which will be discussed at the next meeting of the Committee.

Two other guides are now in the process of preparation. One of the peripheral nerves affecting the extremities is being prepared in original draft form by two members of the Committee, Dr. Kessler and Dr. Mack, with the assistance of Joseph H. Markee, professor of anatomy of Duke University Medical School. A consultant group will be selected when the original draft is ready for submission.

The subject matter of this guide confronts the group with several difficult questions. How is pain to be considered in evaluation of permanent impairment? How can muscle strength be measured accurately and how is its loss to be evaluated? How impairing is sensory loss caused by a nerve lesion? The development of this guide is contingent upon the resolution of these and other questions as they may arise.

The other guide now in preparation is concerned with otolaryngology. A member of the Committee, Dr. Gsell, is the chairman and the specialists appointed by the Committee to prepare the original draft are: John Bordley, Aram Glorig, Dean Lierle, Daniel Miller, and Younger Staton. Harold Westlake, Ph.D., is working on speech impairment problems with the group. The first meeting was recently held at which time an outline of the guide was completed.

It is anticipated that guides for the gastrointestinal, genitourinary, hemic and lymphatic, endocrine, and central nervous systems and the skin will be undertaken as quickly as possible.

Representatives of the W. B. Saunders Company called on the Committee chairman, Dr. McKeown, regarding the possibility of publishing the guides either in a single book or a series of volumes. This proposal will be discussed by the Committee at its next meeting.

BOASI.—The second purpose of the Committee is to maintain liaison with BOASI and its Medical Advisory Committee. The Committee is invited to attend as observers each of the MAC meetings (usually 2 a year) and a copy of the written summary of these proceedings is sent to the Committee after each such meeting.

Sometime ago, BOASI suggested rather informally that the A. M. A. co-sponsor a film instructing physicians in the preparation of medical reports and the use of medical evidence in the process of disability determinations. The Committee suggested to the representatives of BOASI that a formal proposal be made for approval of the Board of Trustees. A letter of agreement was submitted to Dr. Blasingame just prior to the 1959 Annual Meeting. The letter has since been signed and returned to BOASI. The staff will meet in the near future with BOASI representatives to develop a working arrangement.

At the 1958 Annual Meeting, Resolution 23, introduced by the Medical Society of the State of New York, was adopted by the House of Delegates. The resolution was referred to the Committee on Medical Rating for implementation.

Resolution 23 had two resolves:

(1) *Resolved,* That this House of Delegates of the American Medical Association advocate that the schedule of allowances by the aforesaid Bureau of Disability Determinations be not lower than that adopted for the fee schedule of allowances under the Medicare Program in the various states.

(2) *Resolved,* That the Secretary of the American Medical Association is hereby requested to send a copy of this resolution to each constituent association.

The Committee on Medical Rating studied the resolution and then submitted a report to the Board through Dr. Blasingame, recommending that the resolution be not implemented and spelling out in some detail the reasons for this recommendation. The Board approved the report and transmitted it to the House of Delegates. At the Minneapolis Clinical Session the Reference Committee on Insurance and Medical Service concurred in the recommendation of the Committee and approved by the Board. However, the House of Delegates adopted the following amendment to the Reference Committee report:

The appropriate committee of the A. M. A. should be empowered to meet with representatives of the BOASI in Washington to develop a method by which each state medical society can reach an agreement directly with the BOASI concerning medical service rendered within each state under this program.

The Committee on Medical Rating is now studying this amendment.

Committee on Relationships Between Medicine and Allied Health Agencies.—Members of the Committee are: Drs. Sidney J. Shipman, Chairman, San Francisco, California; Paul A. Davis, Akron, Ohio; Paul C. Swenson, St. Paul, Minn.; Alfred Popma, Boise, Idaho; Leonard W. Larson, Bismarck, N. D.; Louis A. Buie, Rochester, Minn.; David B. Allman, Atlantic City, N. J.; and David A. Wood, San Francisco. Staff members are: Mr. George W. Cooley, Secretary; Dr. Donald Dukelow, Consultant; Mr. Donald Berg, Research Associate; and Miss Barbara Farley, Staff Assistant.

The Committee has met on two occasions during the past year—in Minneapolis, Dec. 5, 1958, and in Chicago, April 18-19, 1959.

Committee Activity.—The Committee's booklet "Suggested Guides to Relationships Between Medical Societies and Voluntary Health Agencies" which was published last fall, has had wide acceptance by medical societies and voluntary health agencies. To date, more than 50,000 copies of these Guides have been distributed and requests are still received. The Committee has been informed that these Guides have been used by voluntary health agencies and medical societies as a basis for organizing liaison committees at the local and state level.

Resolutions.—Substitute resolution 7 was approved by the House of Delegates at the December, 1958, Clinical Session and submitted by the Board of Trustees to the Committee for comment. The resolution concerned the feasibility of initiating a national conference of representatives of National Voluntary Health Agencies and United Funds to resolve problems involving fund raising practices by both groups. At the Dec. 5 meeting of the Committee, the resolution was discussed at length and the Committee's recommendations were sent to the Board of Trustees in a memo dated Jan. 6. In essence, this memo stated that the Committee had held meetings with both of the groups concerned and therefore offered its services to the Board if such a national conference was contemplated.

Resolutions 3, 4, and 18 which were submitted to the Board of Trustees at the House of Delegates' 1959 Annual Session concerned relationships between medical societies and The National Foundation. The Board of Trustees, in turn, referred these resolutions to this Committee for study and necessary action.

Meetings.—During the past two years the Committee has held meetings and conferences with representatives of the American Cancer Society, American Heart Association, National Tuberculosis Association, The National Foundation, and other voluntary health agencies. Representatives of United Funds and Councils of America have also been invited to discuss their activities. The Committee believes that these meetings have been beneficial to organized medicine, voluntary health agencies, and United Funds. Also, as a result of these meetings the Committee has been better able to inform physicians and medical societies on the various programs and policies of these health agencies.

Joint Committee on Health Problems in Education of National Education Association and American Medical Association.—The Annual Meeting of the Joint Committee was held at the Drake Hotel, Chicago, March 11-13, 1959. The Committee spent the greater portion of this meeting reviewing manuscripts which ultimately will become the fifth edition of a book entitled "Health Education."

The Editors preparing this edition of "Health Education" are Bernice Moss, Ed.D., professor of health education, Utah University; Warren Southworth, Dr.P.H., professor of health education, University of Wisconsin; and John L. Reichert, M.D., professor of pediatrics, Northwestern University. On completion of the revision, the Joint Committee plans a second edition of "School Health Services," work on which will start in 1960.

A major function of the Joint Committee is the preparation of pamphlets and brochures describing medically and educationally sound policies and practices in the school health program.

During this year, the Chairman of the Joint Committee was E. H. Pawsat, M.D. (A. M. A., Fond du Lac, Wis.); Vice-chairman, Lloyd S. Michael, Ed.D. (N. E. A., Evanston, Ill.); Secretary, Donald A. Dukelow, M.D. (A. M. A., Chicago). At the Annual Meeting the following officers were elected for 1959-1960: Lloyd S. Michael, Ed.D., Chairman; Jay J. Johns, M.D. (A. M. A., Taylor, Texas), Vice-chairman; and Donald A. Dukelow, M.D., Secretary.

Miscellaneous Reports

Report on Matters Referred by House of Delegates in June, 1959.

Traffic Safety.—Resolution 26 endorsed the issuance of a special postage stamp for traffic safety.

This resolution was transmitted to the Post Office Department. Mr. Franklin R. Bruns Jr., Director, Division of Philately of the Post Office Department, replied that the proposal was carefully reviewed by the Department's Citizens' Stamp Advisory Committee which recognized its value but decided it was not possible to recommend such a stamp in the 1960 program. Mr. Bruns stated that the proposal would be considered again, however, in the future.

Public Relations and Public Information.—The House urged even greater emphasis on the liaison program with magazine editors, free lance writers, and other principal sources of public information.

The staff is implementing to the fullest extent this recommendation. In June and July, 14 national magazines requested material on medical or related subjects, or review of articles. Twenty-three articles appeared in June issues of mass circulation magazines, most of which presented a favorable image of the physician.

McDowell Commemorative Stamp.—The Board reported in June, 1959, that the Postmaster General indicated, in response to a request that a commemorative stamp be issued in honor of Dr. Ephraim McDowell, that it was not possible to include this stamp in the 1959 schedule.

The Board can now report that such a stamp will be issued in December, 1959, at Danville, Ky.

Armed Forces Institute of Pathology.—Resolution 37 reaffirmed the position taken at Minneapolis in December, 1958, recommending the establishment of flag rank for the Director of the Armed Forces Institute of Pathology during his tenure of office and actively supported S. 1925, 86th Congress, which provides that an officer of the Army, Navy, or Air Force who is assigned to service as Director of the Armed Forces Institute of Pathology, shall hold a rank of not less than brigadier general, or rear admiral, as the case may be, while so serving.

In accordance with the directive of the House, copies of the resolution were transmitted to the President of the United States and other appropriate individuals and officers. All have indicated, in acknowledgment, that such action is not compatible with existing or projected policies regarding military rank.

Osteopathy.—The American Osteopathic Association has appointed a liaison committee to meet with a similar committee of the American Medical Association. The Board, in accordance with the House action in June, 1959, has appointed an A. M. A. liaison committee. No meeting of the two has occurred yet.

Distinguished Service Award.—The Board wishes to urge that members of the Association submit nominations for the Distinguished Service award. If possible, these nominations should be received in the office of the Executive Vice-president by March 1, 1960.

COUNCIL ON DRUGS

Council Activities

Pursuant to its fundamental program for evaluation of scientific data and dissemination of unbiased information on commercial preparations of drugs, the Council, individually (as referees) and collectively, completed actions leading to publication in The Journal during the current annual period of the following statements for ultimate inclusion in its annual publication, New and Nonofficial Drugs: monographs on 39 new or previously unevaluated drugs; supplemental statements on new uses of 4 previously evaluated drugs.

The Council collectively considered and sponsored publication in The Journal of 10 special reports covering a wide variety of therapeutic subjects (exclusive of those issued by its standing Committees on Pesticides, Research and Toxicology). These included several reports by outside experts dealing with the current status of therapy in such clinical disorders as infantile diarrhea, bronchial asthma and rheumatic fever. There were two reports of broader significance: (1) factors influencing the clinical evaluation of drugs; and (2) oral medication for prolonged action. The Council also published the first two of a series of six papers presented at its previously sponsored Symposium-Panel Discussion on The Use And Abuse of Adrenal Steroids which was held in Washington, D. C., on Sept. 25, 1958.

The Council, through its three-member intramural committee on nomenclature, and as a whole, separately considered and adopted nonproprietary names for a total of 74 new chemical or biologic agents expected to be or recently introduced for clinical use (these names are not for publication except in conjunction with statements or reports on drugs). The members of this committee serve individually as referees in the negotiation of nonproprietary terminology with American commercial sources. Dr. Windsor C. Cutting was appointed to serve as chairman of the committee following the untimely death of Dr. Elmer M. Nelson on Dec. 24, 1958.

The Council held its annual meeting at A. M. A. headquarters on Nov. 21-22, 1958, to receive the previous annual report of its own activities and those of its three standing committees; to elect a chairman and vice-chairman; and to consider special problems and questions of policy. All except three members attended. Dr. Torald Sollmann and Dr. James P. Leake were re-elected chairman and vice-chairman respectively. A unique feature of the meeting was the participation, for the first time, of two guest physicians engaged in full-time practice, who were invited to take part in the discussions and to express their views of the work of the Council. Both physicians revealed that there was a considerable lack of appreciation by the medical profession regarding the care with which the Council critically compiles and provides information on drugs. Their comments, subsequently summarized in a special article by the *AMA News*, indicated that the Council's statements could be made more appealing by changes in style or format and that expert promotional methods were needed to gain the interest of more physicians.

A major part of the agenda of the annual meeting was centered upon a discussion of various ways and means to foster wider readership of Council statements in The Journal and to increase the distribution of the Council's annual publication, New and Nonofficial Drugs. The Council voted to give greater prominence to trade names in its descriptions of drugs by placing them immediately after the nonproprietary titles of monographs and in the titles of supplemental statements; to identify commercial sources of drugs in the index of future editions of the book; to include an alphabetical appendix of the complete organizational names and addresses of these sources; to indicate the year of commercial introduction in conjunction with the publication of monographs on new drugs; and, as far as possible, to add such information to the descriptions of all drugs included in subsequent editions of the book. Also adopted was a motion to appoint an ad hoc committee to consider various suggestions for re-titling the book and the over-all problem of increasing its distribution to physicians; a committee composed of three members, subsequently appointed by the Chairman of the Council, explored this matter and forwarded comments for discussion in the Council bulletin and at the next annual meeting. Suggestions of this committee and other members of the Council for encouraging wider use of the book by physicians included (1) reconsideration of the former custom of distributing free copies to all sophomore medical students, (2) a forceful campaign to circularize directly physicians, hospitals, and libraries concerning the features of the book, and (3) distribution of each annual edition as a part of A. M. A. membership either by absorbing the cost or by an increase in dues.

Because Council-published statements still are being misconstrued by some readers as a form of approval, notwithstanding the termination of the seal-acceptance program in 1955, the Council further voted to preface all future descriptions of New and Nonofficial Drugs in THE JOURNAL with a revised introductory statement to disclaim any implication of endorsement.

The Council adopted a proposal to recommend to the Board of Trustees that the Council's Committees on Pesticides and Toxicology be united to form a separate Council on Toxicology. This matter is under consideration by the Board.

On the basis of a suggested outline of topics for a proposed symposium on acute injuries, the Council voted that Dr. F. A. Simeone undertake the chairmanship and organization of a committee to plan a program on this subject to be held in Cleveland during 1959. Dr. Simeone, together with the Chairman and Secretary of the Council, met in Cleveland on March 18, 1958, with representatives of the Academy of Medicine of Cleveland and Cuyahoga County Medical Society, Western Reserve University School of Medicine, the Ohio State Medical Society and the Ohio Committee on Trauma of the American College of Surgeons to select topics, speakers, and the date and place in Cleveland for a Symposium on the Therapy of Acute Injuries. The Auditorium of the Allen Memorial Medical Library in Cleveland and Oct. 7, 1959, were selected as the place and date for the program.

At the request of its Committee on Research, the Council approved, for consideration by the Board of Trustees, a recommendation that the Committee on Research establish a Subcommittee on Adverse Reactions of Drugs on the Central Nervous System. During this report period the Board had not had an opportunity to act on this recommendation.

During the latter part of this annual period the Council adopted a staff-prepared statement on Penicillin and Other Antibiotics in Milk, a problem arising from the use of animal mastitis preparations of antibiotics by dairy farmers, which had been assigned to the Council for study in conjunction with a resolution introduced at the A. M. A. Clinical Meeting in Minneapolis, Dec. 2-5, 1958.

Staff Activities

The activities of the staff of the Council on Drugs which include implementation of Council actions are summarized under the following categories:

Drug Evaluation.—Over the period of this report, the professional staff selected and transmitted to more than 200 outside consultants in the basic and clinical medical sciences, for their review and opinions, copies of scientific data (usually obtained through the cooperation of interested manufacturers) in conjunction with the Council's fundamental program for evaluation of drugs.

During the same period the staff drafted statements and prepared reports for consideration by the Council, individually and collectively, on a total of 39 new or previously unevaluated drugs and on new uses of 4 previously evaluated drugs for which statements were published in THE JOURNAL. Preparation of statements on drugs for publication by the Council entails creative writing and the exercise of medical judgment on the part of the professional staff, so that they may properly reflect as well as reconcile the shades of expert opinions expressed by consultants and individual members of the Council. In addition to contacts with consultants and individual members of the Council, preparation of each statement requires intensive study and writing by one medically trained individual for the equivalent of approximately 3 to 4 full working days. All drafted statements for publication are pre-edited for THE JOURNAL by the Department Publications Staff before presentation to the Council. Following Council consideration, the staff transmits statements for publication to cooperating manufacturers for comment, and considers their valid suggestions for revision prior to release to THE JOURNAL.

Over-all revision of the 1959 edition of the Council's annual book publication, New and Nonofficial Drugs (to accommodate the inclusion of 41 new drug monographs, and the exclusion of 12 monographs on drugs no longer requiring description or no longer commercially available) was directed by the staff with the editorial supervision of the Department Publications Section. Release of the 1959 edition of the book, for the first time in January of the publication year, was highlighted by a staff-prepared editorial in THE JOURNAL of Jan. 31, 1959, and by a special announcement in the *AMA News*.

The Secretary and other professional members of the staff supervised the preparation of the Council's bi-weekly confidential bulletin which is regularly composed by the stenographic personnel and circulated to members of the Council, together with scientific data on new drugs. The Council's bulletin is used to expedite the consideration of reports and to record transactions of meetings, committee functions, and special announcements. All departmental correspondence, memoranda, statements, and reports formulated by the professional staff, including the stenciling of Council bulletins, is transcribed by nonexempt personnel.

The Secretary prepared an explanatory statement which appeared in THE JOURNAL of Feb. 28, 1959, and simultaneously implemented, on the basis of Council actions, the following changes in the operation of the drug evaluation program: prefacing of descriptions of New and Nonofficial Drugs published in THE JOURNAL with a revised introductory statement to disclaim endorsement; placing of trademark names at the beginning rather than at the end of monographs; identification of commercial sources of drugs for the index of future editions of the book.

The staff instituted, with the cooperation of the Editor, listing of the names of drugs on the cover of THE JOURNAL in those issues in which the Council's statements appear, so as to attract the attention of more readers. The staff also took steps to employ, with some flexibility, additional subheadings in monographs to increase the accessibility of varied information on new drugs.

Nonproprietary Terminology.—The Council staff, with the assistance of the staff of the Chemical Laboratory and the advice of individual members of the Council's intramural committee on nomenclature, separately presented for adoption by the Council as a whole nonproprietary names for a total of 74 new chemical or biologic agents expected to be or recently introduced for clinical use. All nonproprietary terminology was considered in cooperation with interested American commercial sources and, with their permission, also transmitted prior to final adoption for consideration by the U. S. P., N. F., NIH (addicting drugs and biologics only), WHO and BPC.

The staff met informally at headquarters with legal representatives of several pharmaceutical manufacturers on May 13, 1959, to review for them the Council's cooperative arrangement with the foregoing outside agencies in the consideration of nonproprietary terminology.

Special Reports.—The professional staff screened and prepared for Council bulletin consideration, with the editorial assistance of the Department Publications Section, a total of 10 Council-sponsored special reports on various aspects of therapeutics which appeared in THE JOURNAL in addition to those sponsored by its standing committees. These included such subjects as the current status of therapy in particular clinical problems, the first two papers from the previously sponsored Symposium-Panel Discussion on The Use and Abuse of Adrenal Steroids presented in Washington, D. C., Sept. 25, 1958, and two articles of broader therapeutic significance; factors influencing the clinical evaluation of drugs; oral medication for prolonged action. Typescript copies prepared from a tape-recording of all six symposium presentations and the panel discussion were screened by the professional staff, forwarded for editorial review by the speakers, and otherwise readied for consideration and serial publication by the Council.

The Secretary, on approval of the Council, transmitted for consideration by the Board of Trustees a recommendation of the Committee on Research for the proposed establishment of a Subcommittee on Adverse Reactions of Drugs on the Central Nervous System.

The Secretary initiated a study and prepared a statement on Penicillin and Other Antibiotics in Milk, based upon information obtained from the Food and Drug Administration, the American Veterinary Medical Association, and a selected group of allergists. This matter was presented to the Council in conjunction with a resolution introduced at the Clinical Meeting in Minneapolis, Dec. 2-5, 1958, concerning the use of animal mastitis preparations sold directly to dairy farmers. The statement as adopted by the Council and transmitted by the Secretary for consideration by the Board of Trustees at the close of the period of this report was subsequently released for publication as a Council report in accordance with the advice that it need not be reviewed by the Trustees.

Meetings and Programs.—The Secretary, with the advice of the chairman and other members of the Council, scheduled, prepared the agenda, and conducted the Council's annual meeting at headquarters on Nov. 21-22, 1958. In addition to the implementation of changes in operation of the drug evaluation program (noted above), the Secretary also recorded and implemented in the Council bulletin the following further transactions of the meeting: appointment by the chairman of an ad hoc committee of three members to consider a more appealing title for New and Nonofficial Drugs and other ways or means to encourage its distribution; the decision to publish the presentations made at the Symposium-Panel Discussion on The Use and Abuse of Adrenal Steroids (noted above); a motion to ask Dr. F. A. Simeone to serve as chairman and organize a program committee with two other members of the Council and representatives of interested local medical groups to plan a Cleveland symposium on the management of acute injuries.

Upon the subsequent advice of Dr. Simeone, the Secretary implemented formation of the program committee and conducted a meeting on March 18, 1959, in Cleveland to select topics, speakers, and the date and place for the symposium. As of the close of the current report period, plans were completed, in cooperation with the Academy of Medicine of Cleveland and Cuyahoga County Medical Society, the Western Reserve University School of Medicine, the Ohio State Medical Association and the Ohio Committee on Trauma of the American College of Surgeons, to present a Symposium on The Therapy of Acute Injuries on Oct. 7, 1959, at the Auditorium of the Allen Memorial Medical Library of Cleveland. The American Academy of General Practice also gave its approval for an allowance of up to 5 hours of Category II credit for attendance by its members.

As a result of extensive discussion and action by the Council at its annual meeting, the Secretary also transmitted to the Board of Trustees a proposal that the Council's standing Committees on Pesticides and on Toxicology be united to form a separate Council on Toxicology.

Miscellaneous Activities.—In addition to direct replies to numerous outside inquiries concerning drugs, the professional staff provided comments and opinions on many manuscripts and reviewed several books referred from the Editor of The Journal. The staff also reviewed applications for the scientific exhibit at A. M. A. meetings referred from the Secretary of the Council on Scientific Assembly, as well as several motion picture films dealing with therapeutic subjects. The opinions of members of the Council also were polled and transmitted to the Law Division and the Council on Legislative Activities in connection with several proposed federal bills pertaining to drugs or therapy.

Professional Engagements and Personnel.—The Secretary presented a paper on Evaluation of New Therapeutic Agents at a symposium on Stress and Circulation sponsored by The Wayne County Chapter of The Michigan Academy of General Practice in Detroit on Jan. 7, 1959.

Dr. John C. Ballin, Assistant Secretary, attended the Sixth Annual Symposium on Antibiotics in Washington, D. C., Oct. 15-17, 1958, and the 18th Veterans–Armed Forces Conference on the Chemotherapy of Tuberculosis in St. Louis, Feb. 2-5, 1959.

Dr. Christian Wingard, formerly assistant professor of pharmacology at the University of Alabama School of Medicine and Dentistry, joined the headquarters staff on Feb. 2, 1959, as an Assistant Secretary of the Council. Dr. Wingard assists in the review of scientific data and preparation of statements on new drugs for publication by the Council.

Miss Cecilia Conroy, formerly employed as a junior pharmacologist, was engaged as a Staff Assistant on March 1, 1959, to aid the Secretary in the negotiation and consideration of nonproprietary names for new drugs.

The foregoing as well as further contemplated additions to the staff were expected to enable the Council to publish statements on new drugs more nearly coincident with their introduction for general clinical use.

COUNCIL ON FOODS AND NUTRITION

Council Activities

Currently, membership of the Council is: Charles S. Davidson, Chairman; John B. Youmans, Vice-chairman; George R. Cowgill, William J. Darby, Grace A. Goldsmith, Wendell H. Griffith, David B. Hand, Robert L. Jackson, Leonard A. Maynard, Robert E. Olson, and Clement A. Smith.

New projects were initiated and old ones that have proven of value were continued this year.

New Projects.—Interest in the relationship of diet to coronary heart disease has, at times this year, amounted to near hysteria. The Council, several members of which are active in this area of research, has recommended a conservative approach to major dietary changes. As a stabilizing influence, the Council has encouraged continued investigation, but it has also taken action. A committee studied the fat content of the diet, and has been charged with the responsibility of defining the frequently used terms, "low-fat," "moderate-fat," and "high-fat" diets. Dr. Hand, a member of the Council, is serving as chairman of the committee, of which Dr. Paul Day and Dr. George Mann are members. The rough draft of the report of the Committee has been completed and, if accepted by the Council, will be submitted for publication in The Journal of the American Medical Association.

Hypercholesteremia has been implicated by some as a direct correlative of coronary heart disease. Maintaining that the answer cannot as yet be given but that the profession should be kept informed, the Council requested statements from five investigators on "The Significance of Lowered Cholesterol Levels." These statements, to be published in The Journal in August, 1959, represent another new project of the Council; that is, to publish statements or short reports of investigators in areas of current research in which there is not agreement on findings or on the significance of findings.

Another area to which the Council has turned its attention this year is that of radioactivity in foods. The Council decided that a short general report on this subject should be published, followed by frequent reports of the amounts of radioactivity found in foods in various localities. The initial report is soon to be submitted to the Editor of THE JOURNAL.

A more formal cooperation with the American Dietetic Association was begun this year. A committee of physicians and dietitians was appointed to study and to define the frequently used, but seldom consistent "bland" or "low-residue" diet. It is hoped that the Committee, under the Chairmanship of Dr. Franz J. Ingelfinger, will soon be ready to present a rational definition and direction for use of this dietary regimen.

The Federal Food, Drug, and Cosmetic Act was amended in September, 1958, to allow for more complete control of food additives. The Council was pleased with this action, but recognized an added responsibility of the A. M. A. The Council has given serious consideration to the FDA's need for advice as to safety of the many thousands of substances added to foods during production, processing, and packaging.

A committee of the Council, organized several years ago, presented a report on "Vitamin Preparations as Dietary Supplements and as Therapeutic Agents." After preliminary consideration of this report, the Council submitted it for comments to the medical directors of the major pharmaceutical firms that manufacture and distribute vitamin preparations. Careful consideration was given to the many replies that were received from these consultants. In January, 1959, the statement was published in THE JOURNAL. Over 10,000 reprints of this statement on the proper use of multivitamin preparations have been distributed. It also has been added as a supplement to "Statements and Decisions of the Council on Foods and Nutrition."

Continuation of Existing Program: Symposiums.—In 1955, the Council decided to offer to the physician the opportunity of an intense one-day study of various current aspects of clinical nutrition. Usually six papers in a specific area are given by outstanding investigators. Time for thorough discussion is provided. These symposiums are directed toward the family practitioner, and the significance of the research findings to the general practice of medicine is emphasized. The symposiums are held in different locations each time and are cosponsored by local medical schools and medical societies.

As soon as possible following each of these meetings, the papers are published in THE JOURNAL and in monograph form for distribution. A special monograph, incorporating the papers given at the Council sponsored symposium on "Nutrition in Pregnancy" in October, 1957, was published. It was sent to each person who attended the symposium, in addition to the several hundred individual requests.

"Factors Involved in Formation and Diseases of Bone" was the subject of the fifth symposium, held at the University of Wisconsin, Oct. 16, 1958. Co-sponsors were the Medical School, University of Wisconsin, Dane County Medical Society, and the Charitable, Educational, and Scientific Foundation of the State Medical Society of Wisconsin. The papers presented were:

Historical Background of Vitamin D by Dr. H. T. Scott;
Mode of Action of Vitamin D by Dr. H. F. De Luca;
Clinical Indications for Use of Vitamin D Preparations by Dr. D. W. Smith;
Factors Influencing Tooth Formation and Repair by Dr. W. D. Armstrong;
Clinical Considerations in Bone Formation and Repair by Dr. D. M. Angevine and Dr. L. W. Paul;
Lathyrism and Bone Disease by Dr. I. V. Ponseti; and
Fall-out and Radioactive Strontium Utilization in Human Bone by Dr. Willard Libby.

The Council and Vanderbilt University Medical School cosponsored the next symposium which dealt with "Nutritional Problems in Medicine." The program, which was held May 8, 1959, included the following subjects:

Regulation of Electrolytes in the Management of Heart Disease by Elliot V. Newman, M.D.;
Diet and Diuretics in Hypertensive Heart Disease by Harriet Pearson Dustan, M.D.;
Role of Diet in Managing Coronary Heart Disease by Ashton Graybiel, M.D.;
Recognition and Management of Steatorrhea by Julian Ruffin, M.D.;
Celiac Disease and Pancreatic Fibrosis by Paul E. A. di Sant'Agnese, M.D.; and
Absorptive Difficulties Following Gastrointestinal Surgery by Parker Vanamee, M.D.

Cooperation with the Nutrition Foundation, Inc.—The Nutrition Foundation, Inc., New York City, is an organization formed by the food industry to support basic research and education in the science of nutrition. The Council has enjoyed excellent cooperation and support from the Foundation in its nutrition education program. In addition, certain reports are jointly sponsored for publication in THE JOURNAL by the Council and the Foundation. The following practical reports appeared during the past year.

1. Nutritional Management of Children with Diabetes Mellitus by R. L. Jackson, M.D., Sept. 6, 1958.
2. Low Sodium Diets by T. S. Danowski, M.D., Dec. 6, 1958.
3. Hereditary Galactose Disease by G. M. Guest, M.D., Dec. 13, 1958.
4. An Adequate Diet, by L. A. Maynard, Ph.D., May 20, 1959.
5. Diet in the Management of Peptic Ulcer by H. J. Shull, M.D., June 27, 1959.

Exhibit Symposium.—As a part of the scientific exhibit, a question and answer symposium was conducted during the A. M. A.'s Annual Meeting in Atlantic City, June, 1959. Thirty-two sessions were held. Under the general title of "Diet as a Preventive and Therapeutic Tool for the Doctor," subjects, such as diet in weight control, in cardiovascular disease, in the management of trauma, of the adolescent, and in the management of diabetes mellitus, were moderated by authorities in each area. The format of these meetings is a 15-minute introduction of current knowledge by the moderator, followed by a 30-minute period for specific questions from the audience. This represents the third year for such a program.

The Joseph Goldberger Award in Clinical Nutrition.—Annually, the Board of Trustees of A. M. A. cooperates with the Council in presenting the Joseph Goldberger award in Clinical Nutrition. This award is sponsored by The Nutrition Foundation, Inc. and consists of $1,000 and a plaque. It is presented for outstanding research in clinical nutrition. At the 1959 Annual Meeting of the A. M. A., Dr. Carl V. Moore of Washington University, St. Louis, was honored with the award for his work in iron metabolism and anemias. The "Goldberger Lecture," presented before the general session by Dr. Moore, was entitled "Iron Deficiency: Prevalence, Pathogenesis, and Problems in Prevention."

The Joseph Goldberger Fellowships.—The second annual group of fellowships was granted to 10 medical students for research in clinical nutrition. The fellowships, consisting of $600 each, are granted to outstanding students to carry on research during the nonacademic portion of their junior or senior school year. Application for these grants must be made by a faculty member who will supervise the study.

Each year these fellowships are given in honor of the previous recipient of the Joseph Goldberger award. Thus, the fellowships awarded in 1959 honored Dr. Virgil P. Sydenstricker and were for the following research: (1) niacin and niacin-containing cofactors in hepatic lymph; (2) the possible biosynthesis of vitamins A and D in fish; (3) the effects of iron stores and growth on iron absorption; (4) vitamin supplementation and the excretion of urinary oxalate; (5) cholesterol and carbohydrate metabolism; (6) studies on the rate of hydrolysis (in vivo and in vitro) of vitamin A esters; (7) the determination of body density of infants and children and the effect of diet on body composition; (8) an enzymatic and metabolic study of specific amino acids and the effect of certain nutritional conditions; (9) protein and amino acid requirements of rats following experimental injury; (10) the relationship of lipemia clearing to coronary artery disease.

Council Sponsored Articles.—Another means by which the Council presents current, authoritative information to the physician is that of sponsoring reports for publication in The Journal. These reports to the Council are written upon invitation from the Council and must present the subject in a manner to the satisfaction of each Council member before being submitted for publication. During the past year, the following such reports were published:

1. Nutritional State of the Mother Prior to Conception by G. Stearns, Ph.D., Nov. 22, 1958.
2. Maternal Nutrition and the Fetus by R. Hepner, M.D., Nov. 29, 1958.
3. Production of Congenital Malformations by Dietary Measures by J. Warkany, M.D., Dec. 13, 1958.
4. Effect of Reproductive Cycle on Nutritional Status and requirements by W. J. McGanity, M.D.; E. B. Bridgforth, A.B.; and W. J. Darby, M.D., Ph.D., Dec. 20, 1958.
5. Metabolic and Biochemical Changes in Pregnancy by I. G. Macy, Ph.D., Sc.D., Dec. 27, 1958.
6. Vitamin Preparations as Dietary Supplements and as Therapeutic Agents, Statement of the Council, Jan. 3, 1959.
7. Metabolism and Caloric Value of Alcohol by W. W. Westerfeld, Ph.D., and M. P. Schulman, Ph.D., May 9, 1959.

Lay Education.—The Council recognizes another responsibility in the area of nutrition education, and that is to the public. It believes, however, that the most effective means to be employed here is through the physician. The Council encourages its members and its staff to make every effort to serve as consultants or to participate in programs of nutrition education for the public.

Review of Educational Materials.—Trade associations, such as the American Meat Institute, American Institute of Baking, National Livestock and Meat Board, National Dairy Council, National Macaroni Institute and the Wheat Flour Institute have continued to ask for Council attention to their educational materials which are in a variety of forms: for example, booklets, radio and television scripts, exhibits, and advertising. These materials are reviewed by the entire membership of the Council for accuracy of the nutritional statements. When found to be satisfactory, the Council permits each item to carry the statement, "The nutritional statements presented have been reviewed by the Council on Foods and Nutrition of the American Medical Association and are considered to be in keeping with current authoritative medical opinion." Twenty-three pieces of educational materials were reviewed during the past year and all were granted permission to carry the statement after being revised in accordance with the Council's suggestions. Some of this material is presented by the trade associations to both physicians and the public.

Today's Health.—Three articles on nutrition appeared in *Today's Health*. They were:

What Should Oldsters Eat? by H. L. Gillum, July, 1958;
Diet for Mothers-to-Be by I. G. Macy, August, 1958;
How to Eat Well and Reduce Sensibly! by H. S. Mitchell, September, 1958.

These articles completed a series of 12 under the general title of "Food and Health," which was begun in October, 1957, and was co-sponsored by *Today's Health*, the Department of Health Education, and the Council.

Organization.—The Council met in Madison, Wisconsin, in October, 1958, and in Atlantic City in June, 1959. Dr. Charles S. Davidson and Dr. John B. Youmans were reelected Chairman and Vice-Chairman respectively.

The resignation of Dr. Conrad A. Elvehjem, president of the University of Wisconsin, was accepted regretfully. Dr. Elvehjem's 18 years of service to the medical profession as a member of the Council are gratefully appreciated.

Dr. Robert E. Olson, professor and head of the department of biochemistry and nutrition, Graduate School of Public Health, University of Pittsburgh, was welcomed to the membership of the Council. It is expected that Dr. Olson, through his intense activity in current research and his enthusiasm for disseminating practical nutrition information, will be a most valuable member of the Council.

The Council also welcomed Dr. Paul Day, scientific director of the Food and Drug Administration, as the FDA liaison representative to the Council. The value to the Council of such a representative was exemplified in the unstinting services rendered by the late Dr. E. M. Nelson, former director of the Division of Nutrition of the Food and Drug Administration. Dr. Nelson worked closely with the Council for 13 years before his death in 1958.

Dr. Goldsmith received the Osborne-Mendel award, one of the nation's top nutrition awards, given by the American Institute of Nutrition. She was honored specifically for her major contributions in the field of macrocytic anemias, the relationship of niacin to tryptophan, and protein malnutrition.

Staff Activities

The staff of the Council on Foods and Nutrition is directed by Dr. Philip L. White, Secretary. Other professional members are Eugene H. Stevenson, Assistant Secretary, Sandra L. Brodie, and Mary Jane Kibler.

Two responsibilities are recognized: (1) to implement directives received from the Council and from the Association, and (2) to instigate activities that will improve the Council's and the Association's service to the medical profession and to the public.

The business of the Council is regularly carried on by means of a Bulletin and two meetings each year. The Bulletin is issued periodically as needed, usually every two weeks. All of the educational materials submitted by trade associations for Council review, manuscripts of articles, and statements that the Council considers sponsoring for publication, and any other material that requires Council action is included in the Bulletin. All Council actions are recorded in the bulletin. The staff is, of course, responsible for this vehicle of communication.

The staff, in cooperation with the Chairman of the Council, is also responsible for the agenda and for physical arrangements for Council meetings.

During the past year, the Council sponsored two scientific symposiums in cooperation with two medical schools and their local medical societies. The staff works closely with the host Council member and a committee of his choosing in planning the program and the speakers. The staff is in charge of publicity, invitations, and other physical details of these meetings.

In October, 1958, the fifth symposium of the Council was held at the University of Wisconsin, cosponsored by the Medical School, Dane County Medical Society, and the Charitable, Educational, and Scientific Foundation of the State Medical Society of Wisconsin. "Factors Involved in Formation and Disease of Bone" was the title of the symposium.

"Nutritional Problems in Medicine" was the topic under consideration at the sixth symposium, which was held at Vanderbilt University in May, 1959. This meeting was cosponsored by Vanderbilt University Medical School and the Council.

Another means by which the Council presents current and authoritative information to the physician is that of sponsoring reports for publication in THE JOURNAL. Individual members, as well as the staff, suggest areas of need for such reports. When the Council has agreed on the subjects and possible authors, invitations are issued from the Council office. All arrangements, including communications with the authors, revisions to the satisfaction of both the author and the Council, and editing for content and for style acceptable to A.M.A. publications, are handled by the staff. Twelve articles and statements have been published.

In addition, five papers given at the symposium on "Nutrition in Pregnancy," which was held in October, 1957, were re-issued in monograph form.

Three articles on nutrition appeared in *Today's Health* under cosponsorship of *Today's Health*, Department of Health Education, and the Council.

These articles completed a series of 12 under the general title of "Food and Health" which began in October, 1957. In cooperation with the staffs of the cosponsoring departments, this series was handled in much the same manner as Council-sponsored scientific articles.

Several hundred thousand copies of Council-sponsored reprints have been distributed.

All Council activities are coordinated through the office of the Secretary. More detailed report of these activities is given in the report of the Council to the Board of Trustees.

Staff members are available at all times for cooperation with other offices of the Association.

The staff is especially pleased with the results of the campaign to combat nutrition nonsense and false claims. This campaign has been a cooperative effort of the Communications Division, the Department of Investigation, and the Council staff. During the past year, seven exhibits have been put into circulation. One 28-minute movie entitled "The Medicine Man" has been produced and shown on about 150 television stations plus other showings to organized audiences.

Two leaflets entitled "The Merchants of Menace" and "The Healthy Way to Weigh Less" were developed specifically for use with the exhibits on nutrition nonsense and on weight control. They are also promoted to the physician for distribution to his patients as supplements to his instructions. More than 250,000 copies of "The Merchants of Menace" and 600,000 copies of "The Healthy Way to Weigh Less" have been distributed during the past eight months.

At least 6,000 kits of materials designed to assist in planning local programs to combat food faddism have been distributed. It has received wide use by state and county medical societies, home economists, dietitians, and radio and television broadcasters. These kits contain materials to refute popular misleading claims and false ideas, an extensive bibliography, a sample speech, and instructions as to obtaining the movie, exhibits, and literature available from the Association.

Members of the staff cooperated with the editorial departments of the various A. M. A. publications. Manuscripts, "Letters to the Editor," etc., were reviewed. The staff was quite active as consultants for the question and answer columns in both THE JOURNAL and TODAY'S HEALTH.

The staff is frequently asked to serve as a consultant to the Advertising Committee.

Other Activities.—Dr. White was co-director of a Medical Nutrition Survey Team in Peru for three months. This survey was sponsored by the Interdepartmental Committee on Nutrition for National Defense and conducted at the request of the Peruvian government. More than 8,500 members of the Peruvian Armed Forces and civilian population were examined. A nucleus of an Armed Forces Research Institute was developed.

The Association is represented by staff members in a number of other organizations. Dr. White is a consultant to the Youth Power Congress of the National Food Conference, consultant to the Interdepartmental Committee on Nutrition for National Defense, member of the subcommittee on Food and Agriculture of the Interdepartmental Committee on Nutrition for National Defense, member of the Nomenclature Committee of the American Institute of Nutrition, member of the Food and Agriculture Research Advisory Committee of the U. S. Department of Agriculture, member of the Nutrition Committee of the American Heart Association, chairman of the Nutrition Committee of the Chicago Heart Association, and liaison representative of the Food and Nutrition Board of the National Research Council. Mr. Stevenson is also a liaison representative to the Food and Nutrition Board.

Members of the staff frequently participate in meetings of other professional groups and food trade associations. This participation is usually in the form of speeches or exhibits.

COUNCIL ON INDUSTRIAL HEALTH

Council Activities

Membership.—The make-up of the Council is the same as that given in last year's report except for the loss through death of one Council member, Dr. Paul S. Richards of Salt Lake City, and the addition in his place of Dr. Jan H. Tillisch of Rochester, Minn. Dr. Tillisch received his Doctor of Medicine degree from the University of Minnesota, and is at present a member of the Clinical Section of the Mayo Clinic. He has long had an interest in aviation medicine, and was Chairman of the A. M. A. Board of Trustees Committee on Aviation Medicine before aviation medicine was assigned to the Council and a Council Committee appointed (same members as Board of Trustees Committee). This is a Standing Committee of the Council, with Dr. Tillisch as its Chairman. Dr. Tillisch has been President of the Aero (now Aerospace) Medical Association; Consultant to the Surgeon General of the Air Force; Member of the Board of Visitors of the Air Force's Air University and Chairman of its Subcommittee on Medicine; Medical Director, Northwest Airlines; and Member of the American Board of Preventive Medicine.

Meetings and the Congress on Industrial Health.—Three meetings of the Council were held during this period, namely, in Portland, Ore., in September; in Cincinnati in February; and in Chicago in May.

The September meeting was held in Portland at the same time as the Pacific Northwest Industrial Health Conference and the Oregon State Medical Society Annual Meeting, in both of which several of the Council members actively participated. During the visit Council members also spoke before the Executive Club of Portland, the City Club of Portland, the Northwestern Association of Occupational Medicine, and a meeting of State Board of Health personnel and representatives of the voluntary health agencies.

The Cincinnati meeting was held in conjunction with the 19th Annual Congress on Industrial Health. Several excellent sessions were devoted to education and training in occupational medicine, industrial noise, research in ionizing radiation, occupational cancer, toxicology, and the presentation of cases of industrial disease by fellows and staff of the University of Cincinnati Institute of Industrial Health.

As in previous years, conferences with the chairmen of the state medical association committees on industrial health and with the officers and directors of the Industrial Medical Association were held in conjunction with the Congress. This meeting with the state chairmen has proved valuable both to the state medical associations and to the American Medical Association. It has helped to keep the Council apprised of problems requiring its attention. At the same time it has brought to the Council, for the solution of such problems, the collective thinking of the state chairmen, representing the views of physicians engaged in occupational health at the "grass roots." Solutions thus developed have been of inestimable value to the states concerned, often sparing them from having to learn the hard way. Additionally, the Council, acquainted as it is with A. M. A. policies, has been able to communicate and interpret them to the state chairmen for dissemination to their constituencies for their information and guidance. Conversely, the state chairmen and the industrial physicians they represent, being in touch with privately practicing physicians at the "grass roots" level, have been able to gather the latter's views, which have a vital bearing on industrial medicine, and to communicate these views to the Council, enabling it to make pronouncements that are realistic and helpful. The recent establishment by the Medical Association of Puerto Rico and by the Medical and Chirurgical Faculty of Maryland of committees on industrial health attests to the increasing recognition of the need for such committees and of the benefits they can yield the medical profession. All but a handful of the state medical associations now have *industrial health committees.*

General Council Activities.—During the American Public Health Association meeting in St. Louis in October and the Industrial Health Conference in Chicago in May, several of the Council members assisted the American Board of Preventive Medicine in the written and oral examinations of candidates for certification in Occupational Medicine.

Council members Kehoe and Sander represented the A. M. A. at the National Conference on Air Pollution held by the Public Health Service in Washington in November.

Dr. Sander took part as one of four delegates from the United States in an invitational Conference on Pneumoconioses in Johannesburg, South Africa, in February. The Conference was sponsored by the Pneumoconiosis Research Unit of the South African Council for Scientific and Industrial Research. Dr. Sander read two papers: "Radiological Appearances of the More Common Pneumoconioses and of Other Conditions Which Simulate Them," and "The Effect of Continuing in Original Dusty Occupation on the Progression of Pneumoconiosis." Dr. Sander is an associate clinical professor of occupational and environmental medicine, Marquette University School of Medicine.

Drs. Shepard, Kehoe, Sterner, and Newquist, members of the Council, took an active part in the National Health Council's National Health Forum held in Chicago in March. In addition to appearing on the program, Dr. Sterner was General Chairman of the Forum, which this year was on the subject "The Health of People Who Work."

The Council Chairman, with the Secretary and with corresponding representation from other councils and departments of the Division of Socio-Economic Activities and the Division Director and A. M. A. Assistant Executive Vice-president, appeared in May before the Committee on Socio-Economic Activities of the Board of Trustees. The Council Chairman made a verbal report to the Committee, offering recommendations as to the proper scope of activity the Council should have, basing his report upon a report (copies of which he furnished to the Committee) that had been developed by an *ad hoc* Committee on Council Scope chaired by Council member Sterner.

Committee Activities

Committee on Aviation Medicine (Standing Committee)

Dr. Jan H. Tillisch, Chairman, Rochester, Minn.
Dr. Wm. F. Ashe, Columbus, Ohio
Brig. Gen. Victor A. Byrnes, USAF MC, Washington, D. C.
Capt. Oran W. Chenault, USN MC, Washington, D. C.
Dr. Herbert F. Fenwick, Chicago
Capt. Ashton Graybiel, USN MC, Pensacola, Fla.
Dr. G. J. Kidera, Chicago
Dr. Ludwig G. Lederer, Washington, D. C.
Dr. W. Randolph Lovelace II, Albuquerque
Dr. L. O. Simenstad, Osceola, Wis.
Brig. Gen. M. S. White, Washington, D. C.
Dr. B. Dixon Holland, Secretary, Chicago

This Committee met on July 31 and Aug. 1 in Washington, D. C., to study and to formulate comments and recommendations on Medical Study Reports Nos. 1 and 2 of the Flight Safety Foundation to the Civil Aeronautics Administration, entitled, respectively, "Physical Qualifications of Air Traffic Control Personnel" and "Medical Aspects of Civil Aviation"; and to consider the organization of the medical division of the Civil Aeronautics Administration and legislation proposed to upgrade and strengthen this division. The Committee discussed these matters with representatives of the CAA and with Mr. Luikart, Assistant to Mr. Quesada, the then Special Assistant to the President for Airways Modernization and the present Administrator of the newly established Federal Aviation Agency, successor organization to the CAA. The Committee prepared and forwarded to the Administrator of the CAA comments and recommendations on the above-mentioned Flight Safety Foundation Medical *Study Reports.*

The Committee met again in November in San Antonio with Mr. Luikart and with Dr. Smith, former chief of the CAA medical division, and then Acting Civil Air Surgeon of FAA, principally to discuss and make recommendation on the medical setup of the FAA in an attempt to get it so staffed and so placed in the organization chart as to make it maximally effective in developing and applying standards of physical and mental fitness for flying. The Committee also discussed with Dr. Smith ways of getting the fullest possible cooperation between the medical profession and the FAA Civil Air Surgeon's office and central and regional medical departments for the promotion of flying safety. Considerable credit is probably due the Committee for the elevation of the Civil Air Surgeon with his medical department to a position directly under the FAA Administrator, and not under an intermediate office as was the medical chief of the CAA.

The Committee held its third meeting during the report year in April in Los Angeles. It discussed the FAA Administrator's failure to date to fill the position of Civil Air Surgeon; the proposed FAA rule changes to make stricter the standards of physical and mental fitness for flying and to designate physicians for the examination of applicants for Class III Airman (private and student pilots) certificates; the development of a guide to govern the transportation by air of nonmilitary patients suffering various illnesses; the desirability of having space medicine assigned to the Committee; and the development of The Journal editorials to impress physicians with the gravity of the responsibility they incur in pronouncing an individual physically and mentally fit to serve as an aircraft crew member or air traffic controller.

Committee on Interprofessional Relations

(Standing Committee)
Dr. Lemuel C. McGee, Chairman, Wilmington, Del.
Dr. E. S. Jones, Hammond, Indiana
Dr. Charles F. Shook, Toledo

This Committee has been concerned with the importance of presenting industrial medicine, its problems and demands, to the general practitioner. It is he upon whom most small industries must depend almost solely for whatever health guidance is provided their employees. The Committee has convinced the American Academy of General Practice that this is an important area and is assisting that Academy to prepare a meaningful program for its next annual meeting.

The Committee is also concerned with the schism between the American Industrial Hygiene Association and the industrial physicians in general. It has encouraged the AIHA to prepare a statement of Scope, Functions, and Objectives of Industrial Hygiene and to join with the

Council on Industrial Health in various statements which will indicate the most productive relationships between industrial physicians and industrial hygienists.

This Committee directed and coordinated the following Committees.

Committee on Industrial Nursing

Dr. Jermyn F. McCahan, Chairman, Chicago
Mary Louise Brown, R.N., New Haven, Conn.
Dr. David H. Goldstein, New York City
Dr. Emmett B. Lamb, Indianapolis
Katharine A. Lembright, R.N., New York City
Dr. O. Tod Mallery, Jr., Wausau, Wis.
Dr. Charles F. Shook, Toledo
Sara P. Wagner, R.N., New York City

The Committee met in New York in September, 1958, and in Chicago in March, 1959.

The report, "The Legal Scope of Industrial Nursing Practice," which was prepared in cooperation with the Law Division was published in The Journal (pages 1072-1075, March 7, 1959). The paper has been reprinted in at least two journals with wide circulation.

The Committee approved statements from the American Nurses' Association and the American Association of Industrial Nurses concerning the role of the licensed practical nurse in industry.

The Committee is working on the following statements: "Guiding Principles and Procedures for Nursing Care of Industrial Eye Injuries and Diseases," "Education in Occupational Health Nursing," and "The Occupational Health Nurse-Relationship to Management and Medical Supervision."

Joint Committee on Mental Health in Industry

*†Dr. Ralph T. Collins, Chairman, Rochester, N. Y.
†Dr. Leo H. Bartemeier, Baltimore
†Dr. Leonard E. Himler, Ann Arbor
*Dr. W. Donald Ross, Cincinnati
*Dr. Charles F. Shook, Toledo
(*Council on Industrial Health designee;
†Council on Mental Health designee)

This Joint Committee of the Councils on Industrial Health and Mental Health last year met in November in Chicago and in April in Philadelphia to restate and consider the objectives for which it was established and to draw up for their attainment a program of Committee activities. These objectives are (1) to bring to bear effective medical, joint psychiatric and occupational medical, leadership in the solution in industry of such mental health problems as alcoholism, inter-personal frictions, and (2) proper placement and utilization for maximum productivity of individuals who are emotionally or mentally disturbed. Among activities decided upon was the establishment and maintenance of liaison with management and labor groups, state and county medical societies, and other medical as well as nursing organizations in order to learn of their activities in industrial mental health and to determine how best to work with and through them.

Committee on Medical Education and Training

(Standing Committee)

Dr. Robert A. Kehoe, Chairman, Cincinnati
Dr. V. C. Baird, Houston
Dr. Lemuel C. McGee, Wilmington

This Committee has continued with activities designated by its name. It has cooperated with the American Board of Preventive Medicine in the preparation and conduct of written and oral examinations for physicians seeking certification in occupational medicine. It has also been of great assistance in preparing criteria for the accreditation of schools offering postgraduate study in occupational medicine. In addition, it has assisted in the development of criteria for the accreditation of in-plant residencies in occupational medicine.

Committee on Public Services

(Standing Committee)

Dr. Melvin N. Newquist, Chairman, West Cornwall, Conn.
Dr. John N. Gallivan, East Hartford, Conn.
Dr. Jan H. Tillisch, Rochester, Minn.

This Committee directed and coordinated the following Committees:

Committee on Industrial Health Emergencies

Dr. Norvin C. Kiefer, Chairman, New York City
Dr. Cortez F. Enloe, Jr., New York City
Dr. Allan J. Fleming, Wilmington, Del.
Dr. John N. Gallivan, East Hartford, Conn.
Dr. James H. Lade, Albany, N. Y.
Dr. Eugene Walsh, Chicago

Meeting in New York City last September, this Committee started a survey of 65 large industrial companies concerning their experiences with industrial immunization and work absence during the Asian influenza outbreak during the fall of 1957. The data obtained were used as background information for a "Guide to Industrial Immunization Programs." This "Guide" is now being revised, in accordance with suggestions made by the Board of Trustees. Plans for the second major project of the Committee the development of a "Guide to Planning Industrial Disaster Medical Service," were laid out at the Committee's January meeting, also held in New York City. A large number of industrial disaster plans have been studied, and a draft of this "planning guide" has already been prepared. In another project, the Committee is continuing its study of the value and use in industry of mouth-to-mouth resuscitation.

Committee on Workmen's Compensation

Dr. Gerald D. Dorman, Chairman, New York City
Dr. Joseph P. Cain, Jr., Mullins, So. Car.
Dr. Rutherford T. Johnstone, Los Angeles
Dr. Quentin W. Mack, Boise, Idaho
Dr. Jermyn F. McCahan, Chicago
Dr. O. A. Sander, Milwaukee
Dr. Carlton E. Wertz, Buffalo, N. Y.

The Committee met in Chicago in November, 1958.

No reports were published during the year, but the Committee continued work on a revision of the A. M. A. statement on "Medical Relations in Workmen's Compensation."

The Committee established liaison with the International Association of Industrial Accident Boards and Commissions and expects to contribute to the IAIABC annual meetings.

Reports on the following are in various stages of development:

Workmen's compensation aspects of hearing loss.
Workmen's compensation aspects of ionizing radiation.
Medical fees under workmen's compensation.
Medical testimony in compensation cases.

Joint Committee on Medical Care for Industrial Workers

†Dr. Frank J. Holroyd, Chairman, Princeton, W. Va.
†Dr. Thomas J. Danaher, Torrington, Conn.
†Dr. Edwin P. Jordan, Charlottesville, Va.
*Dr. Melvin N. Newquist, West Cornwall, Conn.
*Dr. Leo Price, New York City
*Dr. Wm. A. Sawyer, Rochester, N. Y.
*Dr. Frederick W. Slobe, Olympia Fields, Ill.
† Dr. Clyde C. Sparks, Ashland, Ky.
(*Council on Industrial Health designee;
† Council on Medical Service designee)

This is a Joint Committee of the Council on Medical Service and the Council on Industrial Health.

Its report is included in the report of the Council on Medical Service.

Committee on Scientific Development (Standing Committee)

Dr. James H. Sterner, Chairman, Rochester, N. Y.
Dr. Rutherford T. Johnstone, Los Angeles
Dr. O. A. Sander, Milwaukee

This Committee directed and coordinated the following Committees:

Committee on Neurological Disorders in Industry

Dr. Melvin D. Yahr, Chairman, New York City
Dr. Pearce Bailey, Bethesda, Md.
Dr. Benjamin Boshes, Chicago
Dr. Francis M. Forster, Madison, Wis.
Dr. Robert S. Garber, Belle Mead, N. J.
Dr. Augustus Rose, Los Angeles
Harry Sands, Ph.D., New York City
Dr. Edward D. Schwade, Milwaukee
Dr. Harry E. Tebrock, New York City

A "workshop-type" meeting was held in February with several industrial physicians in Cincinnati at the time of the A. M. A. Congress on Industrial Health. In addition to providing a large amount of information, the meeting gave to the Committee and to the attending industrial physicians a better understanding of the problems of neurological disorders in industry. As a result of the information obtained from this and other Committee investigations, the Committee at its June meeting in Atlantic City prepared a draft of a "Guide to the Classification and Employment of Individuals with Neurological Disorders." In addition to containing a classification of functional capacity, the "Guide" will outline other factors which must be considered by the plant physician, the general physician, the neurologist, and the plant supervisory personnel when dealing with the employment problems of an individual with a neurological disorder.

Committee on Industrial Medical Records

Dr. Earl A. Irvin, Chairman, Dearborn, Mich.
W. M. Gafafer, D.Sc., Washington, D. C.
Annette Hartsock, R.N., Detroit
F. M. Hemphill, Ph.D., Ann Arbor
Dr. J. A. Llewellyn, Butler, Pa.
Patricia O'Brien, R.N., Dearborn, Mich.
Dr. Logan T. Robertson, Asheville, N. C.

At its first meeting, held in Dearborn, Mich., last November, the Committee developed a set of objectives of industrial medical records, which is designed to guide the Committee in developing a kit of standardized, minimal, basic, industrial medical record forms. After studying a large number of industrial medical forms, the Committee developed at its May meeting in Asheville, N. C., a draft of a combined "Health History and Examination" form. Other record forms will be worked on in order.

Committee on Occupational Cancer

Dr. G. Burroughs Mider, Chairman, Besthesda, Md.
Harold F. Dorn, Ph.D., Bethesda, Md.
Dr. John G. Downing, Boston
Dr. Robert E. Eckardt, Linden, N. J.
Edward A. Lew, New York City
W. H. Maguigan, Ph.D., Hopewell, Va.
Dr. John J. Phair, Cincinnati

The Committee met on May 14 at the National Institutes of Health in Bethesda, Maryland to review its past work, including the preparation of its report "Occupational Cancer—Methods of Epidemiological Study" (The Journal, April 26, 1958) and to make plans to continue and intensify its efforts to improve epidemiologic studies for detecting and controlling substances that are or may be carcinogenic which are produced, used and handled in industry.

Committee on Industrial Ophthalmology

Dr. Edmund B. Spaeth, Chairman, Philadelphia
Dr. Franklin M. Foote, New York City
Dr. Ralph S. McLaughlin, Laconia, N. H.
Dr. Joseph F. Novak, Pittsburgh
Dr. Ralph W. Ryan, Morgantown, W. Va.
Dr. Benjamin J. Wolpaw, Cleveland

The Committee met twice, in October, 1958, in Chicago and in June, 1959, in Philadelphia.

Four reports were written and published during the year:
"Tonometry in Glaucoma Surveys," The Journal, Jan. 31, 1959, page 506.
"Use of Water in Emergency Treatment of Chemical Eye Injuries," The Journal, Sept. 6, 1958, page 47.
"Effect of Fluorescent Light on Vision," The Journal, Sept. 6, 1958, page 47.
"Eye Safety Equipment," The Journal, Sept. 6, 1958, page 47. The four publications were reprinted and distributed on request.

The Committee reviewed the acuity charts for distant and near vision developed by the Wilmer Ophthalmological Institute of Johns Hopkins University and recommended that they be referred to the appropriate department within the A. M. A. for evaluation.

Statements are being prepared on: the use of tinted lenses in night driving, and placement in industry of individuals with high myopia and chorioretinal degeneration.

Committee on Occupational Dermatoses

Dr. Donald J. Birmingham, Chairman, Cincinnati
Dr. Frank C. Combes, New York City
Dr. A. Fletcher Hall, Santa Monica, Calif.
Dr. James W. Jordan, Buffalo
Dr. George Morris, Boston
Dr. Ray O. Noojin, Birmingham, Ala.
Dr. Leonard Weber, Chicago

The Committee met in Chicago in December, 1958.

Five reports were prepared and published:
"Occupational Dermatoses—An Introduction," The Journal, July 26, 1958, pages 1636-1637.
"Occupational Dermatoses—Predisposing and Direct Causes," The Journal, Aug. 30, 1958, pages 2203-2205.
"Prevention and Control of Occupational Dermatoses," The Journal, March 21, 1959, pages 1340-1344.
"Prolonged and Recurrent Industrial Dermatitis," The Journal, Oct. 4, 1958, pages 516-520.
"Some Medicolegal Aspects of Occupational Dermatoses," The Journal, Nov. 8, 1958, pages 1351-1359.

The reports were reprinted together in one booklet and added to the Council's publications for distribution.

Committee on Medical Services for Construction Projects

Dr. Irving R. Tabershaw, Chairman, New York City
Dr. Joseph A. Quigley, Hamilton, Ohio

This Committee completed its assigned task with the publication in the Dec. 6, 1958, issue of The Journal of "A Guide for Medical Services for Construction Projects," and has been officially discharged. Reprints of this article are now available.

Committee on the Pneumoconioses

Dr. Edgar Mayer, Chairman, New York City
Dr. Nolan L. Kaltreider, Rochester, N. Y.
Dr. Norman Plummer, New York City
Dr. Frank J. Princi, Cincinnati
Dr. O. A. Sander, Milwaukee
Dr. Arthur J. Vorwald, Detroit
Dr. George W. Wright, Cleveland

This Committee (originally "Committee on Classification of the Pneumoconioses") was authorized by the Board of Trustees in June, 1958, on recommendation by the Council on Industrial Health. It held its first meeting in Philadelphia in June, 1959, and set for itself the task of developing material on the pneumoconioses, particularly for the general practitioner, including classification, causes, clinical and laboratory findings; and guides to correct history taking, examination, disability evaluation, determination of causal relationship to occupation, and medical management.

Joint Activities with Other A. M. A. Groups.—The Council on Industrial Health continued its cooperative efforts with other groups within the A. M. A. In addition to the aforementioned joint activities with the Council on Mental Health through the Committee on Mental Health in Industry, the Council on Industrial Health worked closely with the Councils on Drugs, Medical Physics and Medical Service, and the Committee on Toxicology. In fact, the Council on Industrial Health worked at one time or other with almost every one of the A. M. A. councils, departments and committees.

Liaison with Other Societies, Associations, and Groups

The Council continues to cooperate with the following groups:

American Academy of General Practice
American Academy of Ophthalmology and Otolaryngology
American Association of Governmental Industrial Hygienists
American Association of Industrial Nurses
American Board of Preventive Medicine
American Foundrymen's Society (Committee on Noise in Industry)
American Heart Association
American Industrial Hygiene Association
American Management Association
American Nurses Association (Industrial Nurses Section)
American Public Health Association (Subcommittee on Air Pollution)
American Society of Mechanical Engineers (Committee on Uniform Air Pollution)
American Standards Association (Committee on Uniform Industrial Hygiene Standards and Sectional Committee N6 Reactor Hazards)
American Union of Occupational Medicine (inter-American)
Association of State and Territorial Health Officers
Committee of United States Planning XIII International Congress of Occupational Health to be held in New York City, 1960
Industrial Medical Association and Occupational Health Institute
International Association of Industrial Accident Boards and Commissions
National Association of Manufacturers
National Health Council
National Safety Council's Traffic and Transportation Division, Industrial Division, Committee on Nuclear Energy in Industry, Industrial Nursing Section and Committee on Safety Films
President's Committee on Employment of the Physically Handicapped and its Medical Committee
President's Committee for Traffic Safety
President's Conference on Occupational Safety
World Medical Association
U. S. Government agencies, including the Public Health Service, the Office of Civil and Defense Mobilization, and the occupational health offices of the armed forces' surgeons general.

Miscellaneous.—Members of the Council and members of the Council's various committees were extremely helpful in providing information on many of the inquiries received by the staff on many subjects, such as occupational health programs, industrial nursing, industrial hygiene, job health hazards, job and highway safety, physical examination programs, aviation medicine and preventive medicine in general.

Staff Activities

Personnel.—The make-up of the staff is the same as that given in last year's report.

Activities.—Staff services were provided in connection with the plans and decisions reported in the Council report submitted by the Council Chairman to the Executive Vice-president for transmittal to the Board of Trustees.

The Council Secretary participated in a panel on "Where Is the Manpower Coming from?" at the National Health Council's National Health Forum held in Chicago in March, and took part in the final morning's breakfast sessions, at which suggestions for future action by the National Health Council were formulated.

In May the Secretary of the Committee on Industrial Health Emergencies attended at Battle Creek, Mich., an Office of Civil and Defense Mobilization course in "Industry Defense and Mobilization" as background for his work as Committee Secretary, particularly in the development of the "planning guide" proposed by the Committee.

In February in Chapel Hill, N. C. the Council Secretary attended the Third Annual Governor's Conference on Occupational Health; and the annual Seminar on Occupational Health, sponsored jointly by the School of Medicine of the University of North Carolina, the Committee on Occupational Health of the Medical Society of the State of North Carolina, and the Liberty Mutual Insurance Company. At this latter meeting he gave a talk on the "Scope and Interprofessional Relations of Occupational Medicine," which was accepted by THE JOURNAL for publication in its July 25, 1959, issue.

Staff met with Mr. Clinton Fair and Mr. Jerome Pollack, AFL-CIO, in Washington in April to develop a program of cooperative action between the two organizations in the field of workmen's compensation. Various projects and activities were considered and several agreed upon as worthy of exploration, study, and joint action. The first joint action will be to encourage the creation of medical advisory committees to workmen's compensation bodies in the various states. This was acknowledged to be the first step in securing necessary revision of laws. Future meetings have been planned to continue discussions and planning. The next meeting is tentatively scheduled for Boston in September during the meeting of the International Association of Industrial Accident Boards and Commissions, at which time the A. M. A. *Workmen's Compensation Committee* will also meet. This activity is in consonance with and implementation of the Council's published statements on workmen's compensation, approved by the House of Delegates in 1955.

The Secretary attended meetings of the President's Committee on the Employment of the Physically Handicapped and its Medical Committee. He told the Medical Committee about the work of the A. M. A. Committee on Rehabilitation in promoting greater interest and activity in rehabilitation on the part of physicians in general and recommended that it consider asking the committees on industrial health of the state medical associations to serve as the Medical Committees of the Governors' Committees on Employment of the Physically Handicapped.

The Council staff drafted a "Guide to Organization and Functioning of a Committee on Industrial Health of a State Medical Association," which, when completed with Council and other assistance, will be used to furnish state medical societies the advice they request in organizing and using such committees. It is expected also to be of great help to the chairmen of such committees.

During the past year thousands of copies of reprints pertaining to occupational health were supplied to industrial physicians, general practitioners, nurses, and other interested parties. In response to numerous requests from medical and nursing schools Council publications have been furnished in quantities for use in occupational medicine and nursing instruction. Hundreds of inquiries were answered, some requiring a great deal of literature research. These inquiries concerned a large number of subjects, such as occupational health programs, industrial nursing, industrial hygiene, job health hazards, job and highway safety, physical examination programs, aviation medicine, and preventive medicine in general.

A great deal of staff time was spent in connection with committee activities. Several Council Bulletins were published for the information of Council members.

COUNCIL ON LEGISLATIVE ACTIVITIES

This report covers the period from September 1, 1958, to September 15, 1959. The period of the report has been extended beyond July 1 in order to cover the complete activities of the First Session of the 86th Congress, which recessed on September 15, 1959.

At the December, 1958, meeting of the Board of Trustees and the House of Delegates, the former Committee on Legislation was elevated to Council status and redesignated as the Council on Legislative Activities. At the same time Doctor Martyn A. Vickers of Bangor, Maine, was appointed to succeed Doctor D. Olan Meeker of Riverside, Connecticut, who died on September 13, 1958. Doctor David B. Allman of Atlantic City, New Jersey, and Doctor Raymond L. White of Boise, Idaho, were added to the Council, and C. Joseph Stetler, Director of the AMA Law Division, was designated as Secretary of the Council. The composition of the Council at present is:

George M. Fister, M.D., *Chairman*
McKinnie L. Phelps, M.D., *Vice Chairman*
David B. Allman, M.D.
C. Byron Blaisdell, M.D.
R. B. Chrisman Jr., M.D.
Frank C. Coleman, M.D.
Harlan English, M.D.
Frank J. Holroyd, M.D.
J. Lafe Ludwig, M.D.
John E. McDonald, M.D.
George E. Twente, M.D.
Martyn A. Vickers, M.D.
Raymond L. White, M.D.
C. Joseph Stetler, *Secretary*

During the period covered by this report, the Council met on five occasions: on September 28, 1958, in Chicago, Illinois; on November 30, 1958, in Minneapolis, Minnesota; on February 28, 1959, in Washington, D. C.; on May 8, 1959, in Washington, D. C.; and on August 2, 1959, in Chicago. The Subcommittee on Political Avtivities also met in Chicago on August 1, 1959. The next meeting of the Council will be held in St. Louis, Missouri, on October 1 to be followed by a two-day Medical Legislative Conference to which representatives from all of the states have been invited.

First Session, 86th Congress

During the first session of the 86th Congress which began on January 7, 1959, and ended September 15, 1959, a total of 13,892 bills were introduced. More than one thousand were subject to serious study and 495 were analyzed for consideration by the Council on Legislative Activities. Of these bills 77 have been subject to some form of legislative activity. Six have been signed into law by the President. In addition three bills were awaiting Presidential signature when this report was prepared. There have been 28 reports by committees on bills being followed by the Association. The bills signed by the President involved Extension of the Selective Service Act, Presumption of Service-Connection for Veterans with Leprosy, Presumption of Service-Connection for Veterans with Multiple Sclerosis, Admission Requirements for Immigrant Aliens with Tuberculosis, Public Health Traineeships, and Federal Employees Health Insurance.

The bills awaiting Presidential signature are Nursing Home Loan Guarantees, Extension of the Air Pollution Control Law, and Atomic Energy Act Amendment Regarding Cooperation between the States.

During the period of the report more than 26,000 pages of the Congressional Record were studied and indexed and over 7,000 pages of the Federal Register were scanned for items of interest.

Testimony and Written Statements Presented

During the First Session of the 86th Congress the American Medical Association testified or submitted written statements on nineteen occasions, as shown below:

Bill No.	*Subject*	*Date*	*Presentation*
S. 57	proprietary nursing Mortgage Insurance for homes	1/26/59	Statement
H.R. 2357	Mortgage Insurance for proprietary nursing homes	1/29/59	Statement
H.R. 2260	Universal Military Training and Service Act	2/2/59	Statement
S.J.Res. 41	International Health and Medical Research Act of 1959	2/25/59	Testimony
H.R. 3089	Immigration of Aliens with Tuberculosis, health controls	3/20/59	Statement
S. 94	Health Insurance for Federal Employees	4/27/59	Statement
H.R. 5944	Community Facilities Act	4/29/59	Statement
Immigration and Naturalization Laws		5/26/59	Statement
Social Security		6/3/59	Statement
H.R. 10	Tax Deferment of Annuities for the Self-Employed	6/18/59	Testimony
H.R. 6769	Appropriations for Departments of Labor and HEW, etc.	6/19/59	Statement
H.R. 2347 S. 441	Air Pollution Control Act	6/26/59	Statement
Automobile Safety		7/6/59	Statement
H.R. 4700	Forand Bill	7/15/59	Testimony
S. 2162	Health Insurance for Federal Employees	7/21/59	Statement
S. 57 S. 2378	Mortgage Insurance for proprietary nursing homes	7/22/59	Statement
Problems of the Aged and Aging		8/5/59	Testimony
S. 1283	Hazardous Substances	8/13/59	Statement
S. 2575	Retired Federal Employees Health Insurance	9/2/59	Statement

In view of the oft-repeated and highly inaccurate accusation that the AMA is completely negative in its legislative policies, it is interesting to note that in fourteen of the above instances the Association supported the legislation in question, on four occasions the statement was informational only and only once—in connection with H.R. 4700—did we actively oppose the legislation.

Although all of the bills on which testimony or statements were presented are important, the measures of most current interest and significance to the medical profession are H.R. 4700, the "Forand Bill" and H.R. 10, the Keogh-Simpson legislation.

H.R. 4700—The "Forand Bill"

Undoubtedly the most important legislation with which the Council dealt during the period covered by this report was the Forand Bill, H.R. 4700. This measure proposed an amendment to Title II of the Social Security Act so as to provide hospital, surgical, dental and nursing home benefits for the more than twelve million beneficiaries of the Old Age, Survivors and Disability Insurance program. It was strenuously opposed at all levels of organized medicine and by the majority of other groups in the health field. At the adjournment of the *First Session of the 86th Congress* no final action had been taken on the bill.

Due to the seriousness of the "Forand-type" legislation and its clear-cut threat to the medical profession, the Association established a full time staff task force to work on this campaign. This group has worked closely with the Council throughout the entire year. The plans and strategy of this special staff operation were placed before the Council in detail on several occasions and received the endorsement of the Council on each occasion.

The members of the Council and the state legislative keymen devoted a great deal of time during the period of this report to the Forand campaign. They worked closely with the staff of the newly organized Field Service Division in an effort to effectively contact the twenty-five members of the House Ways and Means Committee and to persuade them and other influential Congressional leaders that this legislation was not in the public interest.

Testimony was given on H.R. 4700 by the Association during the five days of hearings conducted by the House Ways and Means Committee from July 13-17, 1959. Appearing for the Association were Doctor Leonard W. Larson, Chairman of the Board of Trustees, and Doctor Frederick C. Swartz of Lansing, Michigan.

Although this bill was contained in Committee during the First Session of the 86th Congress there can be little doubt that legislation of this type will be the most important measure facing the medical profession and the Council next year. The Council feels that this legislation is a clear-cut and direct threat to the private practice of medicine and is committed with all of the other agencies of the AMA to insure its defeat.

H.R. 10—Keogh-Simpson Legislation

The Keogh-Simpson bills, H.R. 9 and H.R. 10, under the same bill numbers, but with different authors, have been of interest to the American Medical Association and the Council since 1951.

H.R. 10 is intended to provide self-employed persons with an income tax deduction for limited amounts which they set aside for retirement purposes. To qualify as tax deductions these "retirement deposits" must be used:

a) To purchase a "restricted retirement policy" (an annuity or endowment contract underwritten by an insurance company); or

b) Deposited into a "restricted retirement fund" (a tax exempt trust fund administered by a bank).

Amounts set aside in this way and the earnings accumulated therefrom will be free from income taxes until they are withdrawn or paid out in benefits. The taxpayer must start drawing on these funds before he reaches the age of 70½.

The maximum amounts which a self-employed taxpayer could claim annually as a deduction for retirement deposits under the bills, would be limited by these rules:

1) Except as provided in subparagraph (2) below, the taxpayer could deduct up to 10% of his net earnings from self-employment each year, not exceeding $2,500.

2) For the taxpayer who attained age 50 before January 1, 1959, the annual limit would be increased by 1/10 for each full year of his age in excess of 50. Thus, for an individual age 60 on that date, the limit on his annual deduction would be 20% of self-employment income up to a maximum of $5,000.

3) The lifetime total amount which may be set aside tax free (exclusive of the amount which such deposits earn) is 20 times the maximum annual deduction allowable, but no more than a total of $50,000.

A special limitation is imposed on taxpayers who have previously received benefits under an employer's pension, profit-sharing or stock bonus plan.

A "self-employed individual" is defined as one who is subject to the tax on self-employment income under the Social Security Act and doctors and clergymen. The fact that a self-employed person receives some wages, subject to social security taxes, would not necessarily exclude him from eligibility for the deduction. If the taxpayer dies before he reaches age 70, his retirement deposits and accumulated earnings must be distributed within 5 years after death. Payment may be made in a lump sum or used to purchase an annuity for the taxpayer's widow.

The bill restricts the taxpayer from assigning his interest in the fund or pledging it as security for a loan. However, he can name beneficiaries who may inherit his interest if he should die. The bills provide that retirement funds may be invested only in government bonds, mutual fund shares and listed corporate stocks and bonds, and that the taxpayer will be taxed only when he receives payments from the retirement fund or insurance contract.

This bill was favorably reported by the House Ways and Means Committee on February 24, 1959. On March 16, under a suspension of the rules, the bill was considered and passed by the House. The Senate Finance Committee held hearings on H.R. 10 on June 17 and 18 and on August 11. At the June hearings, Doctor George M. Fister, a member of the Board of Trustees and the Chairman of the Council on Legislative Activities, and Doctor Vincent W. Archer, state legislative keyman for Virginia, testified.

Since the first session of the 86th Congress has adjourned it is hoped that action will be taken when Congress reconvenes. Prospects for the passage of H.R. 10 are brighter than they have been since this bill was first introduced eight years ago.

Legislative Activities of the Woman's Auxiliary to the American Medical Association

The program of close cooperation with the Woman's Auxiliary on legislative matters was continued during the period of ths report. The Chairman of Legislative Committee of the Auxiliary continued to attend the meetings of the Committee under a policy instituted in February, 1957. The Woman's Auxiliary has completed its own keywoman organization and all requests for legislative action sent to the state legislative keymen were also relayed to the Woman's Auxiliary through their Legislative Committee.

Conclusion

In closing its report, the Council wishes to express the appreciation to the Board of Trustees, the Woman's Auxiliary, the officers and staff of the Association, and the Washington Office, as well as to the state medical societies, for their cooperation and assistance during the period covered by this report. We particularly wish to asknowledge the significant contribution of the State Legislative Keymen and the physicians in the various states who took part in Federal legislative matters during this period.

COUNCIL ON MEDICAL PHYSICS

Council Activities

The Council on Medical Physics was organized in 1956. This is the third Annual Report and covers the activities and decisions of the Council during the period July 1, 1958, through June 30, 1959.

The Council submitted a list of nominees to the Board of Trustees for consideration for appointment to Council membership. Dr. Irving R. Adams was appointed to serve as a member of the Council to succeed Dr. Irving S. Wright who resigned. One Council member, Dr. Frederic C. Bost, died during the year.

At the request of the Council, William F. Hughes, M.D., submitted a report "Beta Radiation Sources, Uses, and Dangers in Treatment of the Eye." After receiving consultants' opinions on the paper, the Council authorized its publication.

The Council adopted a preliminary draft of a report entitled "Evaluation of Electrical Nerve-Muscle Stimulation in Providing Pulmonary Ventilation." Revisions as suggested by consultants will be incorporated in a final draft which will be considered by the Council for authorization for publication in THE JOURNAL.

Council evaluation projects authorized or under consideration for authorization include the following: evaluation of negative airborne ion therapy; cardiac resuscitation apparatus; room air-filtering apparatus; and oxygen therapy apparatus.

According to arrangements made two years ago, the animated portion of the Council exhibit on artificial respiration was transferred to the Chicago Museum of Science and Industry where it became a part of the Museum's permanent exhibit on the history of artificial respiration.

The Council provided the Board of Trustees with a list of names to be used as a basis for making appointments to the Board's *ad hoc* Committee on Atomic Medicine and Ionizing Radiation. This contained the names of approximately 65 individuals.

The Council-sponsored "Symposium on Mouth-to-Mouth Resuscitation (Expired Air Inflation)," THE JOURNAL, May 17, 1958, has been a significant contribution toward the dissemination of scientific information regarding methods of artificial respiration. It is anticipated that, on the basis of this and other subsequent information, it will be possible to prepare an evaluation report on various methods of artificial respiration intended primarily for use by the general public.

Staff Activities

At the beginning of the 12-month period covered by this report the permanent staff consisted of the Secretary of the Council, the Associate Secretary, and three office secretaries. During the year the Associate Secretary retired from this position to become a consultant to the Department and an assistant to the Director of the Division of Scientific Activities. Also a full-time staff assistant was added, and the services of a research assistant were available for several months.

The staff as part of its general activities provided consultation services and worked with all of the departments of the Association.

In serving the Council on Medical Physics the staff collected and processed data from many sources on various items being evaluated by the Council. Detailed biographical information was obtained on the 65 individuals whose names were submitted by the Council to the Board of Trustees to serve as a basis for appointments to the *ad hoc* Committee on Atomic Medicine and Ionizing Radiation.

Reprints of various Council-sponsored articles were distributed to interested persons or groups on request. These included 5,500 copies of the Symposium on Mouth-to-Mouth Resuscitation (Expired Air Inflation), 200 miscellaneous reprints, and 53,450 pocket-size instruction cards on artificial respiration.

During the year the staff did preliminary planning and survey work for the *ad hoc* Committee on Atomic Medicine and Ionizing Radiation. The necessary arrangements were made for conducting the meeting and providing the Committee with staff services.

Members of the staff participated in the following activities: a meeting of the Executive Committee of the Joint Conference on Electrical Techniques in Medicine and Biology; a meeting of the Committee on Hospital Operating Rooms of the National Fire Protection Association; a demonstration of various types of artificial respiration at the Chicago Health Fair given at the Chicago Museum of Science and Industry; the delivery by the Secretary of a paper at the National Safety Congress and Exposition, sponsored by the Industrial Medical Association, the American Society of Safety Engineers, and the National Safety Council, on oxygen and its uses in resuscitation; a meeting of the National Academy of Sciences–National Research Council *ad hoc* Advisory Committee on Artificial Respiration.

COUNCIL ON MENTAL HEALTH

Council Activities

The Council on Mental Health, since the last annual report, has held two meetings, November, 1958, and February, 1959; also two meetings of the Council's Planning Committee for the "Sixth Annual Conference of Mental Health Representatives of State Medical Associations" were held in February and April, 1959. A meeting of the Executive Committee of the Council was held in April, 1959. A third meeting of the full Council is scheduled for Oct. 16-17, 1959. The Council's primary concerns this year have been in studies relating to the medical uses of hypnosis; deliberations relating to licensure of clinical psychologists; and continued efforts toward strengthening relationships between the Council and the committees on mental health of the constituent medical associations.

During this past year the Council, with Board approval, appointed Dr. Leo H. Bartemeier and Dr. Leonard E. Himler to the newly formed Joint Committee on Mental Health in Industry, which is a joint effort with the Council on Industrial Health for the purpose of improving mental practices in industrial organizations.

Dr. Hugh T. Carmichael of the Council was appointed by the Board of Trustees to the Joint Commission on Accreditation of Hospitals, as its only present psychiatrist member.

Committee on Hypnosis.—In February, 1959, the Board of of Trustees voted to approve the establishment of a Committee on Hypnosis, composed of Dr. Harold Rosen, Chairman, Baltimore; Dr. M. Ralph Kaufman, Council Member, New York City; Dr. Zigmond M. Lebensohn, Washington, D. C.; and Dr. Louis J. West, Oklahoma City. The Committee has held two meetings, April and June, 1959, and is scheduled to have a third meeting in November, 1959. The primary objective of this Committee is to concern itself chiefly with the problem of implementing the suggestions and ideas expressed in the Council's Report on Medical Use of Hypnosis, which was approved by the Board of Trustees and the House of Delegates last year.

At its meetings, the Committee discussed future projects and voted to prepare a series of three or four articles on Medical Use of Hypnosis for publication as a special report in THE JOURNAL, and for compilation in manual form to be available for distribution to physicians throughout the country. The Committee believes that this will aid the immediate need to educate physicians who are now being bombarded with requests to sign up for two three-day courses in hypnotic techniques only. Another project in consultation with the Council on Medical Education and Hospitals, will be a report to the Board of Trustees outlining a proper curriculum for the teaching of hypnosis at medical school and postgraduate levels. It is hoped that a skeleton curriculum for inaugurating such teaching will be ready within the next few months.

Committee on Alcoholism.—Since the last annual report, the Committee on Alcoholism has held two meetings, September, 1958, and February, 1959. The Committee, continuing its attempt to carry out its 18-Point Program, undertook the project of establishing a curriculum for teaching alcoholism in the medical schools. Assistance was received from the Council on Medical Education and Hospitals, which also distributed the curriculum to the deans of all medical schools. The Committee now has under consideration the establishment of uniform terminology and definitions in the field of alcoholism, and will collaborate with the Association's Department of Standard Nomenclature of Diseases and Operations on this project. Plans are being made for a meeting in August, 1959.

Still available at Council headquarters is the Classified Abstract Archive of the Alcohol Literature for physicians and other interested groups as a reference guide to literature dealing with the problems of alcoholism.

Fifth Annual Conference of Mental Health Representatives of State Medical Associations.—Approximately 175 persons attended the Nov. 21-22, 1958, Council-sponsored Conference of Mental Health Representatives of State Medical Associations. The five main topics of discussion at this Conference were:

(1) Emotional Block Versus Brain Damage in the Diagnostic Categories of Mental Retardation or Mental Deficiency in School Children.
(2) Communicability of Mental and Emotional Illness.
(3) Education for Psychiatric Medicine.
(4) The Joint Commission on Mental Illness and Health—Progress and Problems.
(5) Mental Illness and Health in the Aged.

The Conference, as in past years, was chaired by Dr. Leo H. Bartemeier, the Council Chairman. The guest speakers in the morning and evening of Nov. 21 were: Dr. Gunnar Gundersen, President, American Medical Association; Dr. Ernest B. Howard, Assistant Executive Vice-president, American Medical Association; and Dr. Jonas E. Salk, Director, Virus Research Laboratories, University of Pittsburgh School of Medicine.

The Proceedings of the Conference have been published and distributed to all state medical associations and other participating organizations and guests. Copies are still available at the headquarters office.

Preparations are now being made for the Sixth Annual Conference scheduled for Nov. 20-21, 1959, at the Drake Hotel in Chicago.

At the meeting of the Council's Planning Committee in February, 1959, it was decided that there should be one unified topic broken down into a number of main facets. The theme selected and approved for this year's Conference is "Organized Medicine in Its Relationship to the Hospitalized Psychiatric Patient." Six main levels were selected for discussion by the Conference participants, i. e.: (1) state hospital level; (2) private hospital level; (3) general hospital level (psychiatric services in general hospitals); (4) outpatient psychiatric clinics; (5) rehabilitation programs, and (6) Veterans Administration hospitals.

It was also decided at the February meeting to invite the commissioners of mental health of the 50 states to attend this year's Conference. The Committee felt that the participation of the commissioners with the chairmen of the state association mental health committees will make the conference discussions and decisions with respect to improvements that can be made in the care and treatment of the mental patient much more effective. Subsequent meetings on this general theme at state levels will be encouraged to be organized and led by the state chairmen and commissioners jointly after the November meeting. Owing to the scope of this year's theme, it will be necessary to devote two full days to the Conference instead of a one-and-a-half-day meeting as in past years.

Joint Commission on Mental Illness and Health, Inc.—The Joint Commission on Mental Illness and Health closed its headquarters offices in Cambridge on June 30, 1959. Dr. Richard J. Plunkett, who was on part-time leave from the Association to act as associate director of the Commission, returned on a full-time basis to the headquarters office as of July 1, 1959. A skeleton staff will be maintained by the Joint Commission to complete the editing and publication of nine monographs as well as the final report of the Commission, which will be released in early 1960. Drs. Leo H. Bartemeier, Lauren H. Smith, Richard J. Plunkett and M. Ralph Kaufman (Chairman) are still retained as members of the Joint Commission's most important "Committee on the Studies," which reviews all material before final publication. Dr. Bartemeier continues as Chairman of the Board of Trustees of the Joint Commission and the Council is still represented by five of its members on the over-all body of the Joint Commission until the Commission becomes unincorporated, probably in early 1960.

Staff Activities

Activities of the headquarters staff this year as in past years revolve around the necessary implementation of decisions made by the Council which are approved by the Board of Trustees, and current projects of the Council. In this respect, the Secretary of the Council, with the Secretary of the Council on Industrial Health, agreed upon the organizational needs for setting up the first meeting of the Joint Committee on Mental Health in Industry. One of the decisions of this new Joint Committee was to publish an editorial in THE JOURNAL on alcoholism in the transportation industry. The editorial was prepared in preliminary form for approval of the members of the two Councils. Staff activities in this respect involved a bringing together and rediscussion of view-points so that the editorial would properly express the view-points of both Councils.

With regard to the Committee on Hypnosis, staff activity concerned the preparation and circulation to the Council members of a memorandum to the Board of Trustees requesting appointment of the Committee and appointment of members of the Committee. This necessitated a study of the background of the proposed Committee members and submission of this background material to the Board of Trustees along with the memorandum requesting the appointments. Staff activities for this Committee in the past year have also included heavy correspondence with doctors throughout the country who have become interested in the medical use of hypnosis, particularly with regard to where they might best apply for courses in hypnotic induction techniques, and in understanding the dynamics of psychology underlying the hypnotic process. In this we have so far not been able to provide fully satisfactory replies to these requests for the simple reason that there are no such courses in the United States that now fully satisfy the requirements of such a course as visualized by the members of the Committee on Hypnosis.

Staff activities regarding the Committee on Alcoholism this year involved the mechanics of inter-change between the Secretary's office and the Secretary of the Council on Medical Education and Hospitals to arrange for publication and distribution to deans of medical schools a basic curriculum for teaching about alcoholism at the medical school level; this document has been sent to the groups involved.

Considerable staff assistance was necessary during the past year for arranging space, time schedules and agenda for the November 1958 Annual Conference of Mental Health Representatives of State Medical Associations. This involved the preparation of invitation and descriptive material to the proposed representatives, not only of the state medical associations, but to associated participating organizations. As the agenda for each of these Conferences is set up, the staff also undertakes the collection and distribution to the Conference participants as much informational background material as is currently available concerning the immediate (five topics) of the Conference. In general the staff activities involve a continual correspondence with physicians in the United States who have a special interest in some aspect in the field of mental health, interest in what participating activities the Council may be undertaking in these fields, and correspondence with other organizations in the mental health field pointing toward co-operative endeavor in planning and carrying out programs that can be mutually agreed upon as advantageous.

The staff also follows through at the clinical and annual sessions of the Association all memoranda or recommendations made to the Board of Trustees with particular regard to additional information that might be required by the reference committees pertaining to projects or recommendations stemming from the Council.

The Council continues to work closely with many organizations in the field of mental and emotional health outside the Association. Some of these organizations are: American Psychiatric Association; Joint Commission on Mental Illness and Health; National Institute of Mental Health; American Psychoanalytic Association; American Nurses Association; National League for Nursing; and the American Association for Mental Deficiency. Within Headquarters itself the Council continues close cooperation with other Councils and Committees in work that touches upon or overlaps into other special council fields and/or pertains to the overall general efforts and programs of the Association.

COUNCIL ON NATIONAL DEFENSE

Council Activities

Meetings and Administrative Actions.—The Council and its two Committees each held two regular meetings during the period covered by this report, July 1, 1958-June 30, 1959. In addition, the Council held a special meeting on Dec. 14, 1958, in Chicago to review the draft report of the A. M. A. Commission on National Emergency Medical Care and make appropriate recommendations to the Board of Trustees. The Council met in regular session in Washington, D. C., on Nov. 16, 1958, and in Chicago on May 16, 1959. The Committee on Military Medical Affairs met in Washington, D. C., on Oct. 8-9, 1958, and in Chicago on May 4, 1959, while the Committee on Disaster Medical Care held regional meetings in Boston on Sept. 13-14, 1958, and in Colorado Springs on April 17-18, 1959, and a special meeting on March 10, 1958, at Fort Detrick, Md.

The Executive Committee of the Council met during the 1958 Clinical Session in Minneapolis and the 1959 Annual Meeting in Atlantic City. Moreover, Council and Committee members participated in numerous meetings with federal government officials, military leaders, and representatives of constituent medical societies and allied medical and health groups. In addition, Council and Committee members devoted a considerable amount of time to the special study on national emergency medical care.

The Board of Trustees, at its meeting in Minneapolis in December, 1958, approved the change in the name of the Council's Committee on Civil Defense to Committee on Disaster Medical Care. At the same time, the Board approved an increase in membership from seven to nine physicians for each of the Council's Committees.

The resignation of Council member Roscoe L. Sensenich, M.D., South Bend, Ind., a past-president of the Association, was accepted by the Board of Trustees at its meeting in Chicago on Feb. 6-7, 1959. As the fiscal year ended, there was one vacancy on the Council.

At the same meeting, the Board of Trustees appointed Henry A. Crawford, M.D., Cleveland, and Gerald D. Dorman, M.D., New York, to the two new positions on the Committee on Military Medical Affairs. Wayne P. Chesbro, M.D., Berkeley, Calif., and Francis C. Jackson, M.D., Pittsburgh, were appointed to membership on the Committee on Disaster Medical Care. There was one vacancy on the latter Committee as the fiscal year ended because of Dr. Sensenich's resignation.

The Role of the Council and Its Committees.—The Executive Committee of the Council reported on May 17, 1959, to the newly constituted Board of Trustees' Committee on Socio-Economic Activities and recommended a broad revision of the role of the Council in the military medical and disaster medical care areas. An expanded and more active program was recommended for the Committee on Disaster Medical Care. The Board Committee was furnished an outline of the mission and proposed activities of the Committee. Through the Committee on Disaster Medical Care, the Association would provide leadership and guidance in medical and health matters, as they pertain to civil defense and disaster preparedness, to individual physicians, constituent medical societies, national health associations and governmental agencies, and the general public.

In addition, the attention of the Committee was invited to the fact that there are nonmilitary medical activities in some departments and agencies of the federal government, such as the National Security Council, National Aeronautics and Space Administration and the Federal Aviation Agency, the responsibility for which has not been assigned to any council or committee of the Association. Moreover, it was suggested that the responsibility for some federal medical programs which is currently divided among several councils and committees within the Association possibly should be properly assigned to a single council or committee with "primary interest" and the responsibility for maintaining coordination with all other interested agencies of the Association.

Military Medical Activities.—In August, 1958, the Reorganization Act of the Department of Defense was enacted. This, in itself, is the most drastic reorientation of our nation's defense forces in the past 50 years. The Secretary of Defense was provided greatly increased authority, and an all-powerful enlarged Joint Staff, without medical or health staffing, was created.

To maintain liaison with the federal departments and agencies and secure the counsel of the senior military leaders of the medical services, the Committee on Military Medical Affairs held its fall meeting on Oct. 8-9, 1958, in Washington, D. C. In separate meetings the Committee was briefed by the following officials and their staffs: W. Palmer Dearing, M.D., Director of Health Services, Office of Civil and Defense Mobilization; Leroy E. Burney, M.D., The Surgeon General, U. S. Public Health Service; Frank E. Berry, M.D., Assistant Secretary of Defense (Health and Medical); Major General James P. Cooney, MC, USA, Deputy Surgeon General, Department of the Army, representing the Surgeon General, Major General Silas B. Hays; Rear Admiral B. W. Hogan, MC, USN, The Surgeon General, Department of the Navy; and Major General Dan C. Ogle, USAF, MC, The Surgeon General, Department of the Air Force.

At these meetings the Committee was briefed on various military medical subjects and on organizational structure, authority, rsponsibility, functions and current problems within the medical services of the military departments, the U. S. Public Health Service and the Office of Civil and Defense Mobilization. Such meetings with top level federal medical representatives have proved to be most fruitful in promoting discussion and maintaining liaison essential to the understanding of problems in the military medical area. This is of particular note at this time following the Lebanon and the Quemoy incidents involving U. S. forces, with no assigned medical responsibilities at the Joint Staff level.

Many matters in the field of military medicine were considered and recommendations made to the Council by the Committee on Military Medical Affairs at its Washington, D. C., and Chicago executive sessions. There follow some of the more important results.

Office of Assistant Secretary of Defense (Health and Medical) Continued.—The most significant action in the field of military medicine during the year was the decision of the Secretary of Defense, with the concurrence of the President, to continue the Office of Assistant Secretary of Defense (Health and Medical). The Defense Reorganization Act of 1958, Public Law 85-599, approved Aug. 6, 1958, provides, among other things, that the number of Assistant Secretaries of Defense be reduced from nine to seven. Prior to passage of this legislation, the Board of Trustees approved the recommendation of the Council and its Committee on Military Medical Affairs to actively oppose any downgrading of the Office of Assistant Secretary of Defense (Health and Medical). Numerous letters were written and consultations held between the Secretary of Defense, his advisors and officials of the Association and the Chairman of the Committee on Military Medical Affairs. In addition, the Chairman of the Committee on Military Medical Affairs testified on behalf of the Association before the Senate Committee on Armed Services. There is reason to believe that the decision to retain the position of Assistant Secretary of Defense (Health and Medical) was the result, to a considerable degree, of the Association's activities.

"Doctor Draft Law" Extended.—Public Law 86-4, approved March 23, 1959, extended to July 1, 1963, the induction provisions of the Universal Military Training and Service Act of 1948, as amended, which includes the special call-up and pay provisions applicable to physicians. In letters to the Chairmen of the Committees on Armed Services of the U. S. Senate and House of Representatives, the Association, upon recommendation of the Council, affirmed its position of 1957 that, ". . . if the demands for the defense and security of our nation are such that, in the opinion of Congress, it is necessary to have a draft act to maintain the strength of our Armed Forces, then the extension of the present legislation would be one method to insure sufficient physicians for the military services."

In that a four-year rather than a two-year extension of the law was proposed, the Association suggested that the additional two-year extension should be fully explained and justified because scientific and technical advances have resulted in rapidly changing concepts of military manpower requirements. Consequently, there have resulted, directly or indirectly, current and projected reductions in the strength of the Armed Forces and, conceivably, future manpower requirements may be subject to further downward revisions. Thus, it was the Association's view that a two-year rather than a four-year extension of the law would permit a timely review of military manpower requirements in light of pertinent changes in the then current military situations. This would have been particularly desirable with respect to the call-up of medical allied specialists because of the increasing demands and requirements of the civilian population for the nation's medical and health resources.

Equitable Military Call-up of Physicians in Time of National Emergency.—Resolution No. 63 adopted by the House of Delegates at the Annual Meeting in San Francisco in June, 1958, directed that liaison be effected with the Department of Defense for the purpose of effecting a more equitable call-up of physicians by the military services in time of a national emergency.

When this topic was mentioned by the Committee Chairman at the meeting of the Committee on Military Medical Affairs with the Assistant Secretary of Defense (Health and Medical) and members of his staff on Oct. 8, 1958, the Committee was informed that stand-by legislation had been drafted and was available for referral to Congress should the need arise. It was stated that this proposed legislation was a classified document. The Council informed the Board of its inability to further discuss this subject with the Department of Defense.

The utilization of physicians, in fact all medical and health personnel, in a grave national emergency is not of military concern exclusively. The needs and requirements of the civilian population are of equal importance. Consequently, the Office of Civil and Defense Mobilization was advised that the Association felt that it may be desirable for OCDM to request the Department of Defense to review and coordinate this matter with OCDM inasmuch as it has a direct bearing on the extent of medical and health manpower which would be available for the civilian population in time of national emergency.

In response, the Association was informed that OCDM has the continuing advice of its Health Resources Advisory Committee.

Armed Forces Institute of Pathology.—At its Clinical Meeting in Minneapolis in December, 1958, the House of Delegates unanimously approved a resolution that the Association petition the Secretary of Defense to provide for general or flag rank for the Director of the Armed Forces Institute of Pathology during his tenure of office. In response, the Assistant Secretary of Defense (Manpower, Personnel and Reserve) advised on March 26, 1959, that it is the view of the Department of Defense that the establishment of the position of Director of the Armed Forces Institute of Pathology for general or flag rank is not desirable. The reasons advanced were, first, that the specialist qualifications which the Director must possess preclude the routine assignment of a general or flag officer to the position; and second, the services are unable to accommodate within present general or flag officer authorizations a number of positions for which the assignment of a general or flag officer is considered fully justified.

Subsequently, at its Annual Meeting in Atlantic City in June, 1959, the House of Delegates reaffirmed its position and went on record in active support of proposed legislation in the 86th Congress to establish general or flag rank for the Director of the Armed Forces Institute of Pathology during his tenure of office. Copies of this resolution were transmitted to the President of the United States, the Surgeons General of the Departments of Army, Navy and Air Force, and the Chairmen of the Committees on Armed Services of the United States Senate and House of Representatives.

Medical Representation to Joint Chiefs of Staff.—Under the Department of Defense Reorganization Act of 1958, the Joint Chiefs of Staff now have an operational or command as well as a planning capability. Thus, the Council and its Committee on Military Medical Affairs believe that a medical section in the Joint Staff is essential. Currently there are six principal divisions of the Joint Staff. To effect coordinated medical planning for the combined, unified and special commands, the Committee feels that the Joint Staff should incorporate medical plans in the tactical and strategic plans. The Lebanon military operation in the summer of 1958 demonstrated the undesirable results of the three services making independent and uncoordinated medical plans for a combined operation.

On Aug. 20, 1958, the Association, in a letter to the Chairman, Joint Chiefs of Staff, expressed its concern as to how the Joint Chiefs of Staff planned to coordinate the support from the three military departments in the field of medicine, hospitalization, evacuation and sanitation with the combined, unified or special commands. The Association inquired as to what provisions would be made in the reorganized Joint Staff for medical intelligence covering all three services, medical planning for hospitalization, supplies and evacuation, and medical logistics for both tactical and strategic operations in overseas and separate theater commands.

The Chairman of the Joint Chiefs of Staff advised the Association on September 5, 1958 that: the Department of Defense Reorganization Act of 1958 does not change the policy that the military departments continue to be responsible for the support of the forces and personnel except in those cases where one service may provide support to another for reasons of economy and efficiency; the military departments working with the Assistant Secretary of Defense (Health and Medical) will formulate policies and procedures for the care of their military personnel; the military departments will continue to exercise medical planning for hospitalization, supplies and evacuation and medical logistics for the support of the personnel, based on joint strategic plans; and the Joint Chiefs of Staff will participate to the extent it may be necessary to ensure adequate medical support to a unified command and they will recommend allocation of medical resources when necessary and, in this connection, medical logistics will receive adequate consideration by trained personnel on the Joint Staff assisted by the qualified medical personnel of the military departments.

The Committee has noted no unclassified announcement to this date to support this position. The new directive of the Assistant Secretary of Defense (Health and Medical) makes no mention of its responsibilities in this field.

Military Nutritional Surveys.—The Committee has followed with considerable interest the efforts and programs of the federal government and particularly the Department of Defense in the food and nutritional field surveys in Asia, Africa, Europe, and South America. This presents a somewhat unorthodox approach to national defense and security.

National Defense Blood Program.—The Committee, following the Lebanon crisis, visited Washington, D. C. and requested information concerning a national defense blood program. The Committee is happy to note that since then liaison and coordination between the American Red Cross and the Department of Defense has been once again officially established with respect to a National Defense Blood Program.

Medicare Program.—In October, 1958, the Assistant Secretary of Defense (Health and Medical) issued directives *curtailing the care of military dependents in civilian facilities.* This included the denial of cancer detection, diagnosis and treatment in civilian facilities. Upon representation by the Committee, this matter was reviewed by the Department of Defense and in May 1959 directives re-established this care for female dependents suffering from cancer.

Federal Legislative Proposals.—The Council on National Defense advised the Council on Legislative Activities of its unalterable opposition to H. R. 720, a bill to provide for the establishment of a United States Armed Forces Medical Academy. Bills identical with H. R. 720 were introduced in the 84th and 85th Congresses. H. R. 1055 and a companion bill, S. 596, of the 85th Congress were not the subject of Committee hearings. The then A. M. A. Committee on Legislation had reviewed these bills and recommended opposition. The Board of Trustees approved this recommendation as it did the prior recommendation of the Committee to oppose the *identical bill, H. R. 2096 of the 84th Congress.*

The Council also advised the Council on Legislative Activities of the interest of the Council on National Defense in H. Con. Res. 71 and requested that the Council on National Defense be kept advised on developments in regard to this resolution. H. Con. Res. 71 is a concurrent resolution to establish a joint congressional committee to conduct an investigation and study of the alternatives to conscription.

The Council on Legislative Activities was requested to give favorable consideration to a recommendation to the Board of Trustees that the Association support S. 185, a bill to strengthen the Commissioned Corps of the U. S. Public Health Service through revision and extension of some of the provisions relating to retirement, appointment of personnel and other related matters. It was the opinion of the Council that officers of the U. S. Public Health Service should have the same privileges and benefits as medical officers of the military services.

With the concurrence of the Council on National Defense, the Council on Legislative Activities recommended to the Board of Trustees that the Association change its position to one of opposition to the creation of a Federal Advisory Council of Health. In the 84th and 85th Congresses, bills to create a Federal Advisory Council of Health were introduced but did not pass. Those bills provided that such Council would be comprised of four members of the medical profession and three with distinguished records in fields other than medicine, appointed by the President of the United States. The Council on National Defense is of the opinion that it is preferable that existing federal medical authority be implemented rather than that a new Federal Advisory Council be established. The creation of a Federal Advisory Council of Health was recommended by the Hoover Commission Report on Federal Medical Services of February, 1955. Such recommendation was actively supported in principle by the Association.

Disaster Medical Care Activities.—During the fiscal year the Committee on Disaster Medical Care held its third and fourth regional meetings in Boston and Colorado Springs in Office of Civil and Defense Mobilization Regions 1 and 6 respectively. Region 1 consists of the New England states, New York and New Jersey, while Region 6 embraces Colorado, Wyoming, North and South Dakota, Nebraska, Kansas, Minnesota and Iowa.

On the first day of these two-day meetings, the Committee meets with the executive secretary of the medical society of each state in the region, the chairman of each state society's emergency medical service committee and the chairman of the committee on civil defense of the woman's auxiliary to each state society as well as federal medical civil defense officials. The second day is devoted to an executive session of the Committee.

These regional meetings provide a forum for the exchange of ideas and information which is most helpful in the coordination of medical civil defense efforts. The meetings held to date in Atlanta, Dallas, Boston and Colorado Springs have been well attended and very successful in providing a stimulus for renewed effort and cooperation among medical civil defense people at state, regional and national levels of activity.

Some of the more important accomplishments of the Council and its Committee on Disaster Medical Care during the past year follow.

Chemical and Biological Defense.—At the May, 1959, meeting of the Council, a resolution was adopted that the federal Office of Civil and Defense Mobilization be requested to: (1) take appropriate action to have pertinent biological and chemical information declassified and released to the public to permit free discussion and an opportunity for preparation for biological and chemical defense and (2) to give serious consideration to the development of a realistic education and training program dealing with detection, decontamination, and other protective measures against biological and chemical warfare, including the stockpiling of appropriate supplies and equipment for subsequent distribution and use.

OCDM advised the Council on June 4, 1959 that the Department of Defense, the Department of Health, Education, and Welfare and OCDM are now working on the problem of declassifying such information for release to the public. In regard to an education and training program, OCDM is delegating this responsibility to the Department of HEW. OCDM also advised that the Council's resolution coincides with the training and education objectives contained in the National Plan for Civil Defense and Defense Mobilization.

Chemical and Biological Warfare Briefing.—On March 11, 1959, the members of the Committee on Disaster Medical Care, the members of the Health Resources Advisory Committee to the Office of Civil and Defense Mobilization and other federal medical representatives were briefed on chemical and biological warfare concepts and protection at Fort Detrick, Maryland.

Utilization of Reservists for Civil Defense Duties.—The Association's House of Delegates meeting in Clinical Session in December 1958 unanimously approved a resolution favoring the utilization of reserve Armed Forces units and personnel for civil defense operations. A copy of this resolution was transmitted to the Secretary of Defense and the Director, Office of Civil and Defense Mobilization.

The Director of the Office of Civil and Defense Mobilization informed the Association that he was in agreement with the principles of the Association's resolution and that the proposed program has merit. The Director of OCDM also advised that the Health Resources Advisory Committee of OCDM had reviewed and studied the resolution and had endorsed its adoption. Moreover, the Director of Health Services, OCDM, will make an evaluation as to the feasibility of its adoption. The Director of Health Services plans preliminary discussion with representatives of the interested federal agencies. The Department of Defense reply indicated that the Department regularly assists and strongly supports the Office of Civil and Defense Mobilization in its efforts to emphasize and develop such plans and the attainment of optimum survival capabilities.

Self Help in a Disaster Situation.—At its meeting on May 16, 1959, the Council, upon recommendation of its Committee on Disaster Medical Care, voted to support in principle the proposition that health information should be disseminated to the public for use in post-attack situations where expert medical service may not be available. The Director of Health Services, Office of Civil and Defense Mobilization, initiated a discussion of this subject before the Association's Board of Trustees on Feb. 7, 1959.

Upon notice of the Council's action, the Director of Health Services, OCDM, advised on June 2, 1959 that the U. S. Public Health Service has initiated a study to determine what people will have to know and what is the best method of teaching them. On June 9, 1959, the Chief, PHS Division of Health Mobilization, informed the Council that the Boston Public Health Service Hospital, which has the job of determining what people will have to know, has determined that the best approach to developing the essential knowledge would be in the preparation of a standardized procedures manual related to a standardized emergency medical kit. After evaluation, discussion and revision of the material for the manual by a committee recommended by the Schools of Public Health of both Yale and Harvard, the material will be submitted to the Council's Committee on Disaster Medical Care for review and recommendations. The PHS Division of General Health Services has the task of developing a feasible acceptable method of teaching the layman the material that is developed at Boston. This Division's proposals and progress will be submitted at intervals to our Committee for advice, guidance and informational purposes.

Commendation of U. S. Army Medical Service.—At its meeting in Minneapolis in December 1958 the Board of Trustees, upon recommendation of the Council, adopted a resolution of commendation in regard to the achievements of the United States Army Medical Service in conducting disaster medicine courses.

Shortly after World War II, the Army Medical Service initiated courses relating to medical matters incident to atomic and nuclear warfare. Up to December, 1958, nearly 50 courses had been conducted from which over 6,000 students have been graduated.

The resolution of commendation was transmitted to The Surgeon General, Department of the Army, and to the Secretary, Department of the Army.

Dissemination of Civil Defense and Disaster Information.—Meeting in Clinical Session in Minneapolis in December, 1958, the Association's House of Delegates strongly urged that pertinent information relating to civil defense and/or disaster planning be disseminated in The Journal of the American Medical Association and in the publications of state and county medical societies. In implementation, The Journal of Jan. 24, 1959 was a civil defense issue containing all papers presented at the Ninth County Medical Societies Civil Defense Conference of November, 1958, which is sponsored annually by the Council on National Defense. The proceedings of the Seventh National Medical Civil Defense Conference held in Atlantic City on June 6, 1959 will appear in the Sept. 12, 1959, issue of The Journal.

OCDM 200-Bed Civil Defense Emergency Hospital.—On May 27, 1959, the Council requested the Office of Civil and Defense Mobilization to consider the initiation of action to assure that future assemblies of the Civil Defense Emergency Hospital be functionally packed and marked in order to facilitate periodic inspection, use and repacking of the unit's equipment.

In response, on June 9, 1959, OCDM informed the Council that the need for a broader program of quality control has been recognized and that under the pending executive assignment of certain medical and health functions to the Department of Health, Education, and Welfare, it is hoped that an expanded program will be possible. OCDM and the Public Health Service will give full consideration to the Council's recommendations.

OCDM First-Aid Station and Emergency Treatment Station.—Pursuant to the action of the Council at its meeting on Nov. 16, 1958, the Chairman of the Committee on Disaster Medical Care informally discussed with Office of Civil and Defense Mobilization officials the Council's proposal that the OCDM First-Aid Station and Emergency Treatment Station be field tested. OCDM advised that federal policy in this area is under review in light of proposed further assignments of certain responsibilities for civil defense health services of the federal government to the Department of Health, Education, and Welfare for discharge by the U. S. Public Health Service. On finalization of such assignments, the Council's recommendation will be considered.

Flying Physicians Association.—During the year, the members of the Committee on Disaster Medical Care met several times with representatives of the Flying Physicians Association in regard to the utilization of the resources of that Association in disaster situations. As a result of these meetings, as well as a joint meeting with federal medical civil defense officials, it was agreed that the Flying Physicians Association could render maximum assistance through its membership participating in the civil defense plans and programs of the state medical associations and those of the state and local governments. The Office of Civil and Defense Mobilization advised state civil defense directors that members of the Flying Physicians Association are being urged to contact them to volunteer their services. The Council sent a letter to the chairman of the civil defense committee of each constituent state medical association urging those committees to cooperate with the Flying Physicians Association.

Air Defense Command Briefing.—While in Colorado Springs for its fourth regional meeting, the Committee on Disaster Medical Care was briefed by medical officials of the North American Air Defense Command at Ent Air Force Base. The Committee also toured the facilities of the Air Force Academy and was briefed by the Academy's Surgeon.

Federal Legislative Proposal.—The Council on National Defense recommended that the Council on Legislative Activities give favorable consideration to a recommendation to the Board of Trustees that the Association actively support S. 1628, a bill to provide for the vesting of primary responsibility for the protection of the public health and safety from radiation hazards in the U. S. Public Health Service. The Council is of the opinion that air and water pollution is a continuing Public Health Service responsibility and the proposed legislation is a logical extension of the basic responsibility of PHS in keeping with its normal functions concerning public health safeguards.

Special Council Activities: Report on National Emergency Medical Care.—The special study and report prepared at the request of and for the Office of Civil and Defense Mobilization was conducted by a special commission under the guidance of the Council. The report embodies recommendations with respect to the planning, training, and operational organization needed as a basis for a national emergency medical care plan for the treatment and care of casualties and noncasualties prior to, during and after a thermonuclear attack upon the United States.

The threat of nuclear warfare has imposed on the medical and allied health professions of this country a tremendous responsibility in the nation's effort to survive. In view of the important role that the medical profession must recognize and assume in civil defense preparedness, the Council is submitting a separate summary report to the

Board on this study project on national emergency medical care. The summary report will outline the problems and recommendations thereto concerning the role of the medical and associated professions, their functions, responsibilities, and training for medical disaster preparedness.

Ad Hoc Committee on Aeronautics and Space.—This Committee was appointed by the Board of Trustees to advise on the evolution of the government agencies and legislation affecting them in the area of aeronautics and space. Council members Harold C. Lueth, M.D., and Richard L. Meiling, M.D., were selected for membership on the Committee. Leonard W. Larson, M.D., was designated the chairman of the three-member Committee.

On June 2, 1959, the Committee submitted a report and recommendations to the Board of Trustees. The Committee recommended that the Association continue to follow the developments in the space programs and that this project be assigned to one of the existing councils or committees as the "responsible agent" of the Association. The Committee further recommended that, inasmuch as the major portion of the effort in space research and exploration is based upon military considerations, that this assignment be made to the Council on National Defense. As the responsible agency, the Council would continue its liaison with the military services concerned with space medicine and would effect liaison with the National Aeronautics and Space Administration. All other Association councils and committees having an interest in the space program would coordinate their activities with the Council on National Defense. This would permit comprehensive reports on space medicine to the Board of Trustees from a single source.

Appreciation.—The Council and its Committees are grateful for the cooperation and assistance received from the Board of Trustees, other councils and committees and officers of the Association, from allied professional organizations and from officials of federal government agencies with whom we have worked during the past year.

Respectfully submitted,

Reuben A. Benson, M.D.
Carroll P. Hungate, M.D.
Perrin H. Long, M.D.
Harold C. Lueth, M.D.
Walter B. Martin, M.D.
Richard L. Meiling, M.D.
David Henry Poer, M.D.
Herbert B. Wright, M.D.
Harold S. Diehl, M.D., Chairman

August 27, 1959

Staff Activities

This report covers the activities of the headquarters staff of the Council on National Defense for the period July 1, 1958 to June 30, 1959.

Meetings.—The staff prepared agenda, made arrangements for, and provided administrative and stenographic assistance for the ten meetings of the Council, the Committees, and the Executive Committee of the Council. The staff implemented the actions of the Council and Committees throughout the reporting period. Between meetings, members were kept currently advised on significant activities and developments. Appropriate reports on Council actions and staff implementation were furnished the Office of the Executive Vice President of the Association.

In addition, the following meetings were attended by staff members:

July 1958—Conference in Philadelphia with Program Committee of County Medical Societies Civil Defense Conference.
August—Conference in Battle Creek with representatives of OCDM on medical civil defense matters.
September—Conference in Battle Creek with representatives of OCDM on medical civil defense matters.
October—Speaker in Chicago at meeting of Woman's Auxiliary to A. M. A.
—Speaker in Philadelphia at meeting of Pennsylvania Nurses Association.
November—Attended in San Antonio meeting of International Symposium on Space and Medicine.
—Attended in Washington, D. C. meeting of Association of Military Surgeons.
December—Attended in Minneapolis conference on Federal Medical Services.
—Attended in Minneapolis Clinical Session of Association.
—Conference in Minneapolis with officers of Flying Physicians Association on civil defense program of that organization.
—Conference in Chicago with representatives of Department of the Army and National Medical Veterans Society on military medical matters.
January 1959—Conference in Washington, D. C. with military representatives on program of Seventh National Medical Civil Defense Conference.
February—Attended in San Antonio Army Medical Service course on Management of Mass Casualties.
March—Conference in Washington, D. C. with representatives of OCDM and Flying Physicians Association on civil defense program of Flying Physicians.
—Attended in Albuquerque military course on Medical Symposium at Armed Forces Special Weapons Project.
—Attended in Washington, D. C. medicolegal conference.
April—Conference in Detroit with Program Committee of County Medical Societies Civil Defense Conference.
—Attended in Cleveland medicolegal conference.
May—Conference in Atlantic City with military representatives on Seventh National Medical Civil Defense Conference in June 1959.
June—Staffed in Atlantic City Seventh National Medical Civil Defense Conference.
—Attended in Atlantic City Annual Meeting of Association and spoke at meeting of Woman's Auxiliary to A. M. A.
—Attended in Washington, D. C. hearings of Joint Committee on Atomic Energy on environmental and biological effects of nuclear warfare.

National Emergency Medical Care Project.—The staff of the Council participated in a number of meetings in Minneapolis, Battle Creek, Washington, D. C., and Chicago devoted to the study and research project of the special A. M. A. Commission on National Emergency Medical Care. After the Commission completed its mission and the Commission staff released in January, 1958, the staff of the Council carried on the many administrative actions and staff functions necessary in the review, revision, printing, transmittal of the report to the government, and contemplated distribution to medical and health organizations and personnel. Throughout the reporting period, the Council staff assisted the Commission and its staff in the many administrative actions required in furtherance of the project.

Survey of Separated Military Physicians.—The opinion survey begun in 1952 among physicians recently separated from active military duty continues to achieve salutary effects in encouraging not only the improvement of conditions under which medical service is performed in the military but also the maintenance of present high standards. During the current fiscal year, the staff has distributed 4,471 questionnaires of which 2,458 were completed and returned. Results of this survey are compiled each calendar year and published in The Journal. A summary of the compilation is also published in the *United States Armed Forces Medical Journal.*

Physician Placement Assistance.—In a program initiated in 1952 the staff continues to assist physicians being released from active military service by providing information on available civilian medical opportunities. The staff has made such information available to 2,404 physicians during the current fiscal year and received 359 requests for assistance. These physicians were given placement assistance with the cooperation of the Council on Medical Service.

Liaison with Physicians on Active Military Duty.—The staff continues to prepare a monthly article for publication in the *United States Armed Forces Medical Journal.* The pages made available to the Association by the *USAFMJ* are utilized to inform military physicians as to the objectives and activities of the Association, as well as what American medicine is doing currently. Council members also contribute timely articles for the publication from time to time.

Central Repository for Medical Credentials.—The services of the World Medical Association's Central Repository for Medical Credentials, which became available to doctors of the world on July 1, 1958, was publicized to the executive secretaries of state medical associations on Sept. 25, 1958. It was suggested that information on the availability of this worthwhile service be published in state medical association journals and other publications. Acknowledgements were received from many state associations that the service would be publicized. A letter of appreciation was received from Dr. Louis H. Bauer, Secretary General of W. M. A., in regard to this action.

Physician Travel to Hospital in Emergency Situation.—Pursuant to an action taken at the Ninth County Medical Societies Civil Defense Conference in Chicago in November, 1958, the staff communicated with the executive secretaries of state medical associations in regard to the problems involved in getting physicians to hospitals under emergency conditions. A request was made to alert the state associations' committees on emergency medical care to the problem. The committees were asked to work out a solution with local and state law enforcement agencies so that such travel by physicians could be expedited.

County Medical Societies Civil Defense Conference.—The ninth conference of the civil defense organization of the county medical societies, which was held in Chicago, Illinois on Nov. 8-9, 1958, required a considerable amount of time and effort of the staff, in both the planning and presentation of the program. Participating at the most successful conference to date were 217 physicians and allied medical and health personnel from 31 states, the District of Columbia, Puerto Rico, and Canada. Honorable Leo A. Hoegh, the Director of the Office of Civil and Defense Mobilization, was one of the featured speakers. This conference is sponsored annually by the Council on National Defense to inform, assist and encourage medical and health personnel at the local level to plan and prepare to render services which will alleviate suffering and save lives in disaster situations.

All arrangements for these conferences, including invitations and publicity, are handled by the staff. A well received additional feature of the conference was a display, that was prepared by the staff, of medical civil defense publications.

National Medical Civil Defense Conference.—The seventh National Medical Civil Defense Conference was held in Atlantic City on June 6, 1959. All arrangements for these conferences, including invitations and publicity, are handled by the staff. This year's conference was a departure from past conferences in that the program was presented by the United States Army Medical Service. Outstanding medical military leaders sustained the interest of the audience throughout the day with a presentation of a condensed one-day version of the Army Medical Service's excellent one-week course on the Management of Mass Casualties.

The conference was attended by 297 physicians and allied medical and health personnel from 41 states, the District of Columbia, Hawaii, and Canada. Dr. Louis M. Orr, the then President-elect, welcomed the conferees on behalf of the Association while Major General Leonard D. Heaton, The Surgeon General, United States Army, opened the mass casualty care program. The papers presented at the conference appeared in the Sept. 12 issue of THE JOURNAL.

Courses on Management of Mass Casualties.—Under an arrangement with the Office of The Surgeon General, Department of the Army, the Association is given a quota for spaces for civilian physicians to attend the military courses on Management of Mass Casualties. The Council staff publicizes this information and processes applications received from civilian physicians. The one-week courses are conducted at Walter Reed Army Medical Center, Washington, D. C., and Brooke Army Medical Center, San Antonio, Texas.

During the reporting period, seven spaces were filled through the facilities of the Council. For the fiscal year starting July 1, 1959, a total of 16 spaces for these courses have been allotted to the Council.

Publications.—Since May, 1951, the staff has prepared the *Civil Defense Review*, a bi-monthly publication which is distributed to approximately 2,000 civilian and military physicians, allied medical and health personnel, and federal, state, and local civil defense officials and organizations. The *Review* is devoted primarily to the medical and health aspects of civil defense.

There has also been published in THE JOURNAL and other similar publications selected articles and addresses on the medical aspects of civil defense. In addition, the Jan. 24, 1959 issue of THE JOURNAL was a special civil defense issue containing all papers presented at the Ninth County Medical Societies Civil Defense Conference.

Informational material on the medical aspects of disaster medical care and medical planning for civil defense is widely distributed by the staff.

Mass Immunization.—At the June, 1958 meeting of the Board of Trustees, the Special Committee on Influenza was discharged by the Board and the subject of mass immunization was referred to the Council for study. During the reporting period, the principal implementation of Council action was the distribution by the staff of questionnaires to constituent state medical associations and a sample of 2,000 physicians throughout the United States concerning operations and activities of Asian Influenza programs.

A final report on the development of a mass immunization stand-by program has been delayed pending coding, editing, tabulating, and analyzing the information contained in the completed questionnaires which have been received.

Ad Hoc Committee on Acronautics and Space.—This Committee, composed of Drs. Leonard W. Larson, Chairman, Richard L. Meiling, and Harold C. Lueth, members, was appointed by the Board of Trustees to advise on the evolution of the government agencies and legislation affecting them in the area of aeronautics and space. Through administrative staffing by the Secretary of the Council on National Defense, the Committee has been kept informed of the various space programs. The Secretary is currently maintaining a resource and reference file on astronautics and space.

COUNCIL ON RURAL HEALTH

Council Activities

The Council on Rural Health is composed of nine physicians from different areas of the country and each Council member is responsible for a certain group of states designated as regions. In June, 1945, the American Farm Bureau Federation invited the American Medical Association to join it in a study of rural health problems. For this purpose A. M. A. created a committee which is now the Council on Rural Health. Other rural organizations were invited to augment this cooperative program. There are now 13 medical and nonmedical advisors representing the Farm Bureau, the National Grange, the Extension Services of the Land-Grant Colleges, the American Agricultural Editors Association, the Farm Foundation of Chicago, the Woman's Auxiliary to the

A. M. A. and the American Veterinary Medical Association. The valuable contributions of these groups has given us a fine cross-section of rural thinking. These professional, educational, and producer groups also carry on programs at the state and regional level. The coordination of state programs geared to a common objective would certainly increase the effectiveness of all these programs.

A resolution passed by the House of Delegates at the clinical session in December, 1957, reads:

> "That the House of Delegates urge each state medical association to give greater support and encouragement to its state rural health committee in its work with state farm organizations and rural groups, and encourage said committee to ask county medical societies to appoint a physician or a committee of physicians to form a closer liaison with and work with all local farm organizations and rural groups."

The House of Delegates at the clinical session in December, 1958, adopted the following report of the Reference Committee:

> "Dr. F. A. Humphrey appeared before the Reference Committee and explained the current activities of the Council. The Committee endorses the principles under which the Council works and notes with satisfaction the many activities which the Council is continuously carrying on. It was brought out during the course of the hearing that a certain amount of apathy exists on the part of individual physicians as regards cooperating with the various rural organizations. Your committee recognizes the great demand on the time of individual physicians, but nevertheless feels compelled to encourage members of the Association to cooperate individually with the Farm Bureau, the Grange and similar organizations whenever opportunity and time permit."

Cognizant of both the resolution and the report of the Reference Committee, the Council has called upon the members of all state Rural Health Committees to assist in carrying out this program. Chairmen of Rural Health Committees in a number of states have directed letters to county societies urging that a Rural Health Committee be appointed in the counties where one does not exist, to work more closely with rural and farm organizations in their respective areas.

Farm-City Week.—The Rural Health Committees in numerous states have cooperated in the National Farm-City Week program which for the past four years has been spearheaded by Kiwanis International.

Regional, State, District, and County Meetings.—From among the 45 states having Rural Health Committees, 14 of them have held state Rural Health Conferences, and a regional conference was held in the Northeast which combined a group of 10 states. Preceding this conference a meeting was held with advisory members from the various farm groups to formulate the regional program, and in this particular instance it is the Regional Director's belief that this type of meeting does a great deal to bring together varying people who are interested in rural health. Florida's program through its state Rural Health Council is creating the best leadership for the various rural groups in that state. Its twice yearly council meetings are well attended, the spirit of cooperation exemplary and its attitude, aggressive; and its Regional Director feels this is a state of which we can be proud. In the state of North Carolina, this year four district meetings were held, instead of a state meeting. These were all well attended. In addition, two health programs were held in connection with the annual State Farm and Home Week, sponsored by the Home Demonstration Department of the Agricultural Extension Service. The state leader arranged these programs, inviting the local physicians to participate; the state society feels that this is further indication of physical cooperation and interest in rural health activities. In each instance where state or regional conferences have been held, the Regional Directors have assisted in program planning and have participated in these conferences.

Dr. F. S. Crockett as Council Chairman has worked through the entire year maintaining personal contacts with advisory members, participating in a number of state Rural Health Conferences, and consulting with members of various state Rural Health Committees and state officers of State Farm Bureau organizations. He has held three conferences with officers of the American Farm Bureau Federation relative to better liaison with that organization.

Of particular importance to the Chairman was a meeting he attended of the co-chairmen of the Indiana Committee on Rural Health with the president of the Indiana Farm Bureau relative to re-activating the rural health work in that state. As a result of that meeting, a joint meeting of various medical and rural groups is being planned in order to explore areas of cooperation that will be beneficial to the farm groups as well as the medical profession. He also attended several county meetings in connection with re-activation of the state Committee on Rural Health. Dr. Crockett has worked very closely with the Cardiac Research Project at Purdue University, acting as liaison between the state Rural Health Committee and the various other rural organizations. He has participated in the Senior-Junior Medical Day programs in several states, and also has assumed full responsibility for carrying out all plans and programs in connection with the 14th National Conference on Rural Health in Wichita, Kan., as well as carrying out the various other routine duties delegated to the Chairman by the Council.

Last July at the suggestion of the Council, the Extension Committee on Organization and Policy of the Land-Grant Colleges appointed a study committee to make a survey to establish better liaison between the two groups, and to consider (1) goals fixed by the Extension Services in all matters relating to the health of rural people; (2) availability of services and professional resources of the A. M. A. for the benefit of those whom both seek to serve; and (3) definition of duties of the health educator on the Extension staff.

The Council is represented on this committee by two members from its Advisory Committee and its past and present Chairmen. Several meetings were held at which progress reports were furnished. The report in final form was presented at the Advisory Committee-Council meeting on Sept. 11.

Lack of personnel has prevented the Council from giving as much active and continuous support at the state and county level as is necessary to carry on the most successful program, and it is hoped that a suitable Field Director will be employed as early as practicable.

Council Chairman Visits South America.—Dr. Crockett representing the American Medical Association made a tour of South America under the sponsorship of International Seminars, Inc. This trip covered eight major countries and nine major cities and provided contacts with local physicians as well as discussions on organization and policy of medical societies and inspection of various medical schools and hospitals. A full report of this trip was personally presented to the Board of Trustees with his recommendations.

Farm Magazine Health Column Service.—In 1956 the Council inaugurated a farm magazine health column service which was concluded about three months ago. These health articles were prepared by physicians, edited by a special lay writer, and distributed through the Council to executive secretaries for distribution to farm magazine editors. This service was enthusiastically received and since its discontinuance, the Council has received many letters from farm editors asking for additional service of this type.

Medical Scholarship and Loan Funds and Preceptorship Programs.—In a number of states carrying on successful medical and scholarship loan programs, this is an activity of the state Rural Health Committee. In Minnesota the seventh rural medical scholarship has been awarded. In Ohio the 11th scholarship has been awarded this year. In Illinois, this scholarship program was established in 1948; to date

25 doctors are serving rural areas under this program and 6 who are now in military service will go into rural practice this year. Eleven more are serving as interns in various hospitals around the state and 13 who have been approved this year will join 43 other students already in medical school. This particular program carries with it the stipulation that the students agree to practice five years in a rural area after completing medical training, internship, and military obligations. In Kentucky, 48 former fund recipients are now in practice in rural Kentucky areas—23 of this number have fulfilled their moral obligation to the Fund and 25 are in the process of doing so. Seventy-nine are in medical school or taking internship training. Twelve recipients are now in the armed forces and seven have practiced in rural areas and have completed their obligation; four are currently completing specialty training. Other states active in similar rural medical scholarship programs are Virginia, West Virginia, and Indiana.

In Iowa the Rural Health Committee has worked with the preceptorship committee in gaining greater acceptance for this program from the members of county medical societies because it feels that the experience provided through participation in the program constitutes the best means of persuading young doctors to practice in small communities. In this state the Rural Health Committee is also responsible for the physician placement service. This is also true in Indiana and Wisconsin. Several other states are participating in this program.

The preceptorship program in Kansas, which has become nationally known as the "Kansas Plan," continues to be most successful and has the wholehearted support of the medical society as well as the medical schools in that state. It is used as a pattern for other states to follow.

Council and Advisory Meetings.—Two meetings of the full Council were held during this period, one in Chicago in September, the other in Wichita, Kan., in March; three Executive Committee meetings were held during the year, two in Chicago and one in Atlantic City; one Advisory Committee-Council meeting was also held in Chicago. The Advisory Committee, made up of various representatives of national, farm, educational, research, and public organizations, came to the meeting primed with suggestions as to the areas of work that might bear fruit in the field of rural health. Similarity of interests on the part of these advisory groups was apparent in several areas: nutrition, hospital facilities, insurance plans, and the possible transference of antibiotics and hormones in food from milk, poultry, and meat animals to humans. The need for greater leadership by state and county medical societies in rural health programs was also expressed by these advisory representatives.

Because of these many opinions a special Study Committee was appointed by the Council to consider the suggestions for a re-activated program of the Council. Two meetings of this special committee were held for the purpose of studying all phases of the Council's work and making recommendations and suggestions for future activities. At the second meeting the Study Committee's report was presented and accepted but because several Council members were not present, definite action was delayed pending study by all Council members and discussion at the next Council meeting. The report as compiled was furnished to the Executive Vice-president's office for submission to the A. M. A. Board of Trustees. Set forth in the Study Committee's report is the statement that it believes that the basic philosophy of the Council should not be changed; it suggests that the program be altered and broadened and the techniques modified to encompass the following activities: (1) closer liaison with the several farm groups; (2) modification and broadening of the national conference; and (3) more frequent and continuing contacts with farm groups at both national and state level, and with state medical associations through field representatives of the Council.

National Conference.—The 14th National Conference on Rural Health was held in Wichita, Kan., March 5-7, 1959, and was attended by approximately 700 representatives of medicine, farm organizations, governmental agencies, and lay groups. This lacked only a few registrants of equaling the all-time high in attendance, despite a sudden blizzard which tied up all traffic for 24 hours. The over-all theme was "Horizons in Rural Health" and the subject of each presentation was pointed toward this theme. Of particular note was the fact that the medical profession was well represented, and the Kansas Medical Society is to be commended on its intense interest in the meeting and its excellent cooperation and participation, not only in the meeting but also in the suggestions for the program. The Council is grateful to the officers and personnel of the state society for their enthusiastic assistance in helping to develop all phases of the conference. There was good representation from national groups as well as lay leaders of rural organizations. The news coverage was excellent and all of the speakers cooperated in radio, television, and personal appearances as well as addressing various clubs, etc. It was believed there were more farm people attending this conference than any of the previous ones.

Activities of Advisory Members.—Mrs. Charles W. Sewell participated in a Senior Medical Student program at the University of Kansas, School of Medicine, Kansas City, Kan.; participated in the 14th National Conference on Rural Health; addressed the Senior-Junior Medical Student Group in Indiana; addressed the Arkansas Rural Health Conference; and participated in five radio broadcasts, three television appearances, and six tape recordings for future National Farm and Home Hour broadcasts. Mrs. Sewell also participated in the Northeast Regional Conference, appearing on the program as well as acting as a consultant.

Miss Gertrude Humphreys represented the Council and participated in the program of the National Home Demonstration Agents Association at its national meeting in Chicago.

Mrs. Mason Lawson, Liaison Member, A. M. A. Woman's Auxiliary, attended the National Conference in Wichita and prepared an excellent summary of the conference for inclusion in the Auxiliary Bulletin.

Resignation of Council Members—Appointment of New Officers.—After 14 years of successfully guiding the activities of the Council on Rural Health, Dr. Crockett tendered his resignation as Chairman at the annual meeting in Atlantic City in June. The Board regretfully accepted his resignation and appointed Dr. F. A. Humphrey of Fort Collins, Colo., as Chairman and Dr. C. S. Mundy of Toledo, Ohio, and Dr. N. H. Gardner of East Hampton, Conn., as Vice-chairmen. Dr. Crockett will remain a member of the Council.

The Council regretfully accepted the resignations of Dr. W. J. Weese at its March meeting and Dr. Willard A. Wright at its June meeting.

In summing up his Council membership for the past nine years, Dr. Wright made this comment:

> "In general there is now a mutual respect between farm organizations and medical organizations, largely accomplished through the efforts of the Council on Rural Health and various committees and others working with them."

The Council on Rural Health is grateful to the Board of Trustees, the House of Delegates, and the management of the American Medical Association and to the constituent medical associations and their staffs for the encouragement, support, and cooperation it has received during the past year.

Staff Activities

The Council office, in addition to regular routine duties, acts as a clearing house of information for various health services of organizations and agencies in rural areas; continues to maintain working relationships with state medical societies and state committees handling rural health matters. In addition, it handles special assignments delegated by the Chairman and members of the Council which included attendance at state rural health meetings, annual meetings of national farm groups, inspection trips to various parts of the country in connection with future sites for national conferences and makes definite arrangements for the national conference after final approval by the Council. This office also keeps current rosters of (*a*) state Rural Health Committees, (*b*) state and National Grange contacts, (*c*) Agricultural Extension Leaders, and (*d*) Farm Magazine Editors; handles the preparation and distribution of pre-conference fliers, conference programs, all details in connection with physical arrangements at the time of the conference; miscellaneous mailings of specialized material of particular interest to farm people; and all details in connection with Council, Executive, Advisory, and special committee meetings.

The annual digest of the 14th National Conference on Rural Health was compiled. Approximately 3,000 copies have been distributed. These were directed to state Rural Health Committee members, executive secretaries of state medical associations, members of both Houses of Congress, leaders of agricultural and educational groups, etc. Approximately 2,000 individual requests for various kinds of materials have been mailed out from this office during this period.

The Council was represented at a conference of the President's Committee on Migratory Labor in St. Louis, sponsored by the Council of State Governments.

The Council was empowered by the Executive Committee to contact several prospective applicants for the position of Field Director.

Several conferences were held with the Executive Vice-president relative to re-activation of the Council's program. Members of the Executive Committee collaborated with the special study committee on a final report to be submitted to the full Council at its next regular meeting.

Pamphlets.—The A. M. A. continues to receive numerous requests for both family health records and personal health information cards from agricultural and educational leaders, and large quantities of these have been furnished for distribution at county, state, and national meetings. These originated in the Council, but in recent months the distribution has been taken over by the Communications Division. The Council staff is complying with many requests to furnish the two health pamphlets, "Check and Know" and "A Member of the Family—Your Doctor."

COUNCIL ON SCIENTIFIC ASSEMBLY

Council Activities

This report includes a summary of the activities of the Council on Scientific Assembly for the year from July 1, 1958, to June 30, 1959.

Council Meetings.—The Council on Scientific Assembly held four stated meetings during the year and conferred with other groups four times. In addition, subcommittees of the Council were active during the period covered by the report.

New Chairman.—Dr. Stanley P. Reimann was elected chairman to replace Dr. Alphonse McMahon. Dr. McMahon served several years with great efficiency, but asked to be relieved of the duties of chairman.

Meetings with Section Secretaries.—The Council met twice with the Section Secretaries, once at an all day meeting in Chicago and once at a dinner meeting in Atlantic City. The increasing enthusiasm and cooperation of the Secretaries for the best possible kind of a program is heartening, and will result in a distinct contribution to graduate medical education.

Meeting with Section Representatives to the Scientific Exhibit.—The Council was host to the Section Representatives at dinner in Atlantic City. This group of Section officers has become more and more active in the Annual Meeting and has made fine contributions to the program.

Meetings with Section Delegates.—Members of the Council were guests of the Section Delegates at breakfast meetings in Minneapolis and Atlantic City. The Council appreciated these opportunities to discuss general policies for Section activities with the Section Delegates.

Publicity for A. M. A. Meetings.—The Council discussed various methods for bringing the two meetings of the Association to the attention of the physicians of the country. It was felt that the situation could be improved by taking advantage of the facilities available.

Date of Annual Meeting.—Future dates for the Annual Meeting will be placed after June 15 each year. There is great difficulty in obtaining desired participants on the program during the first part of June because of interference with school graduations.

Mead Johnson Traveling Exhibit.—Approval was given to Mead Johnson & Company to reproduce selected scientific exhibits on slides for showing in foreign countries.

Purdue Frederick Traveling Exhibits.—Approval was given to The Purdue Frederick Company to arrange for certain scientific exhibits to be shown at meetings of state and county medical societies and other medical groups over the country.

Squibb Awards.—The Council considered an offer from E. R. Squibb & Sons to establish awards of $1,000 each for the best clinical paper read at the Annual as well as the Clinical Meetings. The Council was much impressed with the possibilities of such awards, but because of certain inherent difficulties, felt that the offer should be declined at the present time.

Schering Film Reports.—Approval was given to a request from Schering Corporation to make a film report of the Dallas Clinical Meeting to be shown to the medical profession throughout the country.

Merck Sharp & Dohme Request for Stenotype Coverage.—A request from Merck Sharp & Dohme for stenotype coverage of certain sessions at the Minneapolis Clinical Meeting was relayed to the Council. Inasmuch as the request came to the attention of the Council too late for investigation, action was deferred.

Smith, Kline & French Recognition.—The Council took note of the fact that Smith, Kline & French Laboratories had presented color television programs at the Annual and Clinical Meetings of the American Medical Association for 10 years. In addition to an award presented in the House of Delegates, the Council voted to recognize the anniversary at one of the General Scientific Meetings in Atlantic City.

Liaison Committee, Medical Section, Pharmaceutical Manufacturers Association.—The Liaison Committee of the Medical Section of the Pharmaceutical Manufacturers Association considered 26 suggestions for the improvement of the Annual Meeting. These matters are being studied for implementation. Members of the Liaison Committee are: Dr. W. D. Snively, Mead Johnson & Company, Evansville, Ind.; Dr. Edward Henderson, Schering Corporation, Bloomfield, N. J.; Dr. John Henderson, Johnson & Johnson, New Brunswick, N. J.; Dr. Edwin B. McLean, Cutter Laboratories, Berkeley, Calif.; Dr. Clayton G. Weigand, Lilly Research Laboratories, Indianapolis, Ind.; Dr. Stanton M. Hardy, Lederle Laboratories, Pearl River, N. Y., and Dr. Charles E. Lyght, Merck Sharp & Dohme, Rahway, N. J.

Nomination for Distinguished Service Award.—In accordance with a request from the Board of Trustees, the Council on Scientific Assembly presented a list of seven nominees for the Distinguished Service award. The Board of Trustees submitted three names from this list to the House of Delegates. Dr. Michael E. DeBakey was the final selection by the House of Delegates for this outstanding award. This achievement, by a member of the Council on Scientific Assembly, is an indication of the outstanding caliber of the physicians serving on the councils and committees of the American Medical Association.

Award for Scientific Achievement.—The Council voted to recommend to the Board of Trustees that it consider the establishment of an award for "scientific achievement and its applicability to medicine" in addition to the Distinguished Service award and the Citation of a Layman for Distinguished Service. This matter is under consideration by the Board.

Clinical Laboratory Examinations at Annual Meeting.—A proposition from the *Section on Pathology and Physiology*, whereby blood counts, blood chemistry, urine analysis, and Papanicolaou tests would be made in the Scientific Exhibit at the Atlantic City meeting for physicians requesting such tests was considered and was not accepted. At the Atlantic City meeting, the Section on Pathology and Physiology passed a resolution urging the Council to reconsider the proposition for the Miami Beach meeting.

Trans-Atlantic Conference.—The Council approved a Trans-Atlantic Conference with the British Medical Association for the Clinical Meeting in Dallas. The program will be carried on by two-way telephone conversations between panels in Glasgow and Dallas. Smith, Kline & French Laboratories will sponsor the project.

Society for Investigative Dermatology.—The Council approved a request from the Section on Dermatology, whereby the Society for Investigative Dermatology will hold its meetings in Miami Beach in conjunction with that Section.

Integration of Other Specialty Groups with Sections.—The proposition of integrating specialty groups with respective Sections of the American Medical Association has been approved in principle by the Council. The Association for Research in Ophthalmology has been meeting with the Section on Ophthalmology for some years, on a year to year basis, and the Society for Investigative Dermatology will meet with the Section on Dermatology in Miami Beach in 1960 on a trial basis. In addition, some 34 other organizations contribute to the program of the Annual Meeting to a greater or lesser degree. A recommendation that the American College of Chest Physicians combine its meetings in whole or in part with the Section on Diseases of the Chest emphasized the fact that the whole matter of integration should be studied further with a definite clarification of the issue. The Chairman of the Council appointed a committee to study the problem and report back to the Council.

Inclusion of Color Television with Orthopedic Surgery.—The Secretary of the Section on Orthopedic Surgery, at the request of the Council, discussed the possibility of integrating part of the program of that Section with color television at the Miami Beach meeting. The matter is being studied and the Secretary will report to the Council at the coming Conference of Section Secretaries.

Admission Restrictions to Scientific Activities.—Members of the Council were concerned about the restrictions imposed for admission of physicians only to Convention Hall in Atlantic City on certain mornings during the meeting. This deprived other persons from attending the scientific activities located in the hall during those periods, some of whom should have been admitted. The chairman of the Council appointed a committee to study the problem.

Physicians' Art Exhibit.—The Council recommended that the American Physicians' Art Association be encouraged and that proper space for its exhibit be arranged by the American Medical Association at Annual Meetings.

Allergy Session.—The Council approved a request from the American Academy of Allergy and the American College of Allergists for a Session on Allergy under the Section on Miscellaneous Topics at the Miami Beach Annual Meeting, 1960.

Science Fair.—The Science Fair Committee of the Council attended the National Science Fair in Hartford, Conn., selecting four exhibits for awards. The two top winners brought their exhibits to the Atlantic City Meeting where they were displayed in the Scientific Exhibit. The expense was borne by the Communications Division of the American Medical Association.

Council Committees.—The Chairman of the Council appointed seven committees, composed of Council members, to take care of the following phases of the Council's activities:

Executive Committee
Scientific Exhibit Committee
Motion Picture and Medical Television Committee
Science Fair Committee
Distinguished Service Award Committee
Committee to Study Admission Restrictions at Annual Meeting
Committee to Study Integration Problems with Specialty Groups

Minneapolis Clinical Meeting.—The Council members observed at great length all scientific activities at the Clinical Meeting in Minneapolis, including lectures, color television, Trans-Atlantic Conference, motion pictures, and scientific exhibits. Studies were made concerning features that could be expanded, improved or deleted for the Dallas Clinical Meeting in 1959. Members of the local committee in Dallas were guests of the Council in Minneapolis and conferred with the Council throughout the week.

Atlantic City Annual Meeting.—Meetings of the 21 Sections of the Scientific Assembly were assigned to various members of the Council for observation. Council members not otherwise engaged (in the House of Delegates or with the Board of Trustees) spent practically the entire week in *studying scientific activities and informing themselves* concerning methods for obtaining the best results in the future.

Five Sections passed resolutions at their business meetings some of which will be considered by the Council on Scientific Assembly, and others referred to the proper agencies.

Section on Surgery, General and Abdominal.—A resolution requesting that the name of this Section be shortened to Section on Surgery.

Section on Laryngology, Otology and Rhinology.—A resolution requesting that audiograms be included in the physical examinations of physicians at the Annual Meeting.

Section on Pathology and Physiology.—A resolution urging the Council on Scientific Assembly to continue exploration of the possible establishment of an exhibit in clinical pathology of a practical scope.

Section on Ophthalmology.—A resolution directing the attention of the medical profession to the Glaucoma Identification Card which will make immediately available to all attending physicians information concerning the patient's use of and requirements for miotics and other medications.

Section on Anesthesiology.—A resolution in opposition to a third year of training in anesthesiology. A resolution approving mouth-to-mouth breathing in resuscitation.

Future Plans.—The Council on Scientific Assembly is aware of the evolution taking place in medical meetings of all kinds, and is studying the problem so that meetings of the American Medical Association will be of the greatest possible benefit to the physicians of America. Several factors may be mentioned.

Total attendance at annual and clinical meetings at the present time usually exhausts the capacity of hotels for sleeping rooms in the cities where the meetings are held. An increased total attendance cannot be expected, therefore, unless physicians living in the areas of the meetings attend in greater numbers.

Specialty organizations have increased both in number and in attendance over the years, competing with the Sections of the Scientific Assembly. Studies are being made concerning a joint cooperative effort between some of the specialty groups and the Sections.

Joint meetings of Sections of the Scientific Assembly are increasing in number and the Council is encouraging the trend.

Methods of medical communication are being studied. The popularity of visual methods is bringing about a combination of such methods with the spoken word.

Staff Activities

This report covers activities of the headquarters staff of the Council on Scientific Assembly for the year 1958-1959. In some instances there is duplication with the report of Council activities since the staff attended Council meetings and carried out the directions of the Council.

Council Meetings.—The Council on Scientific Assembly held four stated meetings during the year and conferred with other groups four times. In addition, subcommittees of the Council were active during the period covered by the report. The staff made all arrangements for these meetings, preparing the agenda, arranging for hotel rooms, lunches and dinners, keeping the minutes and carrying out the recommendations of the Council.

Meetings with Section Secretaries.—The Council met twice with the Section Secretaries, once at an all day meeting in Chicago and once at a dinner meeting in Atlantic City. The staff performed the usual functions incidental to the administration of these meetings. Preliminary correspondence and telephone conversations, followed by individual contacts after the meeting, helped to maintain the enthusiasm and cooperation of the Section Secretaries.

Meeting with Section Representatives to the Scientific Exhibit.—The Council was host to the Section Representatives at dinner in Atlantic City. This group of Section Officers has become more and more active in the Annual Meeting and has made distinct contributions to the program. Members of the staff made arrangements for the dinner, and welcomed the opportunity of meeting personally this important group of Section officers who have become more and more active in their contributions of time and effort at the Annual Meeting.

Meetings with Section Delegates.—Members of the Council were guests of the Section Delegates at breakfast meetings in Minneapolis and Atlantic City. A member of the staff attended both meetings, appreciating the opportunity of discussing general policies for Sections with the Section Delegates.

Requests from Pharmaceutical Houses.—Several requests from the following pharmaceutical houses were received at Headquarters and transmitted to the Council for consideration:

Mead Johnson & Company to reproduce selected scientific exhibits on slides for showing in foreign countries.

Purdue Frederick Company to arrange for certain scientific exhibits to be shown at medical meetings over the country.

Schering Corporation to make a film report of the Dallas Clinical Meeting.

Merck Sharp and Dohme to make stenotype reports of the Minneapolis Clinical Meeting.

E. R. Squibb & Sons to establish an award of $1,000 each for the best clinical paper read at the Annual and Clinical meetings.

As much information as possible was secured by the staff about each of these propositions and reported to the Council.

Liaison Committee, Medical Section, Pharmaceutical Manufacturers Association.—Members of the staff conferred with this group on several occasions. The 26 suggestions for the improvement of the Annual Meeting are being studied by the staff.

Nominations for Distinguished Service Award.—The staff secured biographies of nine nominees of the Council for the Distinguished Service Award. The names of the seven nominees finally selected were transmitted to the Board of Trustees with biographies.

Clinical Laboratory Examinations at Annual Meeting.—The Council considered a proposition from the Section on Pathology and Physiology, whereby blood counts, blood chemistry, urine analysis and Papanicolaou tests would be made in the Scientific Exhibit at the Atlantic City meeting for physicians requesting such tests. Members of the staff held several conferences with representatives of the Section on Pathology and Physiology, besides carrying on much correspondence. A legal ruling on the matter was obtained from the Law Department.

Trans-Atlantic Conference.—The Council approved a Trans-Atlantic Conference with the British Medical Association for the Clinical Meeting in Dallas. The program will be carried on by two-way telephone conversations between panels in Glasgow and Dallas. Smith, Kline & French Laboratories will sponsor the project. Members of the staff communicated with officers of the British Medical Association both in London and Glasgow, as well as with representatives of Smith, Kline & French Laboratories in Philadelphia and with the local chairman of the program in Dallas.

Society for Investigative Dermatology.—The Council approved a request from the Section on Dermatology, whereby the Society for Investigative Dermatology will hold its meetings in Miami Beach in conjunction with that Section. Members of the staff communicated with officers of the Society, as well as the Section, and made preliminary arrangements for the 1960 meeting.

Science Fair.—A member of the staff accompanied members of the Council on Scientific Assembly to the National Science Fair in Hartford, Conn., where two high school students were selected to attend the Atlantic City Meeting. The staff assisted the Council and made the necessary arrangements for the exhibits in Atlantic City.

Student A. M. A.—The Secretary of the Council, with a committee appointed for the purpose, studied the scientific exhibits at the meeting of the Student American Medical Association and selected two exhibits for showing at the meeting of the American Medical Association in Atlantic City.

Section Officers.—There were 115 officers of the 21 Sections, with whom contact was maintained throughout the year. A list of the officers with addresses was prepared and widely distributed. Letterheads for most of the officers were printed and sent out. The bulletin, "Information for Section Officers," was revised according to new Bylaws and distributed. Likewise, "Section Rules and Regulations for each Section were revised and distributed as well as "Rules and Regulations of the Scientific Assembly."

Program Copy.—Copy for the official program was assembled and edited by the staff and sent to the printer. Proofs were read and corrected and an index prepared. The Minneapolis program contained 475 names of participants and the Atlantic City program 2,000 names.

Applications for Scientific Exhibit.—Application blanks for space in the Scientific Exhibit at the Annual Meeting were prepared by the staff and sent to Section Secretaries, Section Representatives to the Scientific Exhibit, deans of medical schools and a mailing list of about 1,000 names carefully selected from several thousand previous participants in the Scientific Exhibit. Many individual requests were also filled. As each application was received, it was numbered according to the Section specified. Multiple copies were made of each application which were sent to Section Secretaries, to Section Representatives and to other sources, as necessary, for opinions. After the closing date, Section officers again reviewed the applications and submitted revised lists for acceptance or rejection. On the basis of these opinions copies of the applications were submitted to the three members of the Committee on Scientific Exhibit with recommendations for acceptance or rejection. Members of the Committee studied all applications returning their reports to the staff with notations, agreeing or not agreeing with the recommendations. Three hundred eighty-five exhibits were accepted for the Atlantic City Meeting from about 600 applications. All applicants were notified by the staff concerning acceptance or rejection.

Applications for space in the Scientific Exhibit at the Clinical Meeting followed a somewhat different pattern, since the Sections did not participate. Very few mailings were made of application blanks, except in response to special requests. In a few instances award winners at the previous Annual Meeting were urged to submit applications. Information concerning the acceptability of applicants was obtained as necessary and recommendations passed to the Committee on Scientific Exhibit in the usual manner. One hundred twenty-five applications were received of which 101 were accepted. Each applicant was notified by the staff of the decision of the Committee. Special exhibits brought the total number in Minneapolis to 120.

Floor Plan for Scientific Exhibit.—The floor plan for the Scientific Exhibit at the Annual Meeting was arranged by Sections of the Scientific Assembly, with each exhibitor being assigned space according to his needs. This required much time by the staff, several trial plans being drawn before one was obtained which was acceptable. Although an effort was made to allow 50% of the floor area for aisles, this could not be done at Atlantic City because of posts. The final plan was submitted to the Convention Services Department for copying, after which it was printed. Each exhibitor received a copy, showing the exact location, space number and size of booth.

The floor plan for the Clinical Meeting followed a similar procedure.

Exhibitors Requirements.—The staff mailed a blank to each applicant in the Scientific Exhibit who was accepted requesting information concerning special requirements, such as illumination, power outlets, transparency cases and shelves. The information was assembled and turned over to the Convention Services Department for transmission to the exhibit contractor.

Speakers Requirements.—The staff mailed cards to all speakers on the scientific program requesting information concerning special requirements for speakers. The replies were assembled and turned over to the Convention Services Department.

Committee on Awards.—The Committee on Awards for the Scientific Exhibit consisted of five physicians selected from a panel of 25 names approved by the Council on Scientific Assembly. Service on the Committee on Awards required that members have no other duties on Monday and Tuesday of the week of the meeting, either during the day or the evening.

Members of the staff briefed the Committee on its duties, sat in with it on its deliberations, obtained the services of various consultants as advisors, wrote the final report, and accompanied the members when recipients were notified of awards.

Medals and Certificates.—During the summer and fall of 1958, the six medals awarded in the Scientific Exhibit at the San Francisco Meeting, 1958, were engraved and sent to recipients. Accompanying each medal were certificates, one for each person named on the medals. These, together with certificates of merit and certificates of honorable mention, were engraved and signed by the President of the American Medical Association and by the Secretary of the Council on Scientific Assembly.

Special Exhibits.—The staff secured all supplies and made arrangements for special exhibits.

The special exhibit on fractures shown both at Minneapolis and Atlantic City, required a supply of surgical gowns and trousers, nurses gowns, rubber gloves, sheets, pillows and pillow cases, plaster bandages of various sizes, cast knives, and a long list of miscellaneous supplies necessary for good fracture treatment. All these were checked and sorted by the staff before each meeting and packed in special cases for easy access during the demonstrations. The illustrations for the walls of each booth were checked and packed so that installation was readily accomplished. The pamphlet on fractures for distribution during the meeting was edited and printed by the staff.

The Special Exhibit on Fresh Tissue Pathology at the Atlantic City Meeting used a large number of white laboratory coats, rubber gloves, trays for specimens, three deep freezers and the necessary towels, buckets, and trash cans. The staff made all arrangements, except for the actual collection of specimens.

The Special Exhibit on Pulmonary Function at Atlantic City required the services of the staff in providing space for equipment, together with platforms, speakers' stand, microphone, and chairs supplied by the Convention Services Department.

The Special Exhibit for the Centennial of the Section on Nervous and Mental Diseases was prepared and installed by the staff, with the advice of officers of that Section. Construction of the exhibit was done by the Exhibits Section of the Communications Division.

Physical Examinations Made at the Atlantic City Meeting.—"An Annual P. E. for Every M.D.," required a large amount of preparation by the staff. The location of this feature was especially difficult because of the sensitivity of electrocardiogram instruments to outside influences. Cots were furnished, with tables for ten instruments and all necessary arrangements for technicians, clerks and consultants. Chest x-rays, on the other hand, required space close to a high powered electric source. The lead wall for the x-ray room is owned by the Association and carried to the meeting. Several conferences were held by the staff with representatives of the General Electric Company, X-ray Department, in preparation for this feature. Careful attention was given to space needs and traffic flow to accommodate the many hundreds of physicians who took advantage of the opportunity for physical examinations.

Question and Answer Conferences.—Arrangements were made at the Atlantic City Meeting for two question and answer conferences. One was on diet in cooperation with the Council on Foods and Nutrition of the American Medical Association and the other on diabetes in cooperation with the American Diabetes Association, under the chairmanship of Dr. Howard F. Root, Boston. The conferences were conducted continuously throughout the week. The staff made all necessary arrangements for each of these conferences.

Hotel Accommodations.—All participants on the program, at both Annual and Clinical Meetings, were sent hotel accommodation blanks marked "Scientific Assembly." The Convention Bureau in each instance was alerted to watch for these forms, and assign rooms as nearly as possible in accordance with the applicant's wishes. In addition, reservations in hotels were made for demonstrators in the fracture exhibit, special exhibit committees, and Section officers, through the Convention Services Department.

Medical Students.—Arrangements were made with the Convention Services Department for a group of medical students to assist with the details of the Scientific Exhibit at the Annual Meeting, and to serve as ushers in the meeting rooms.

Council Office at Meeting.—At the Annual and Clinical Meetings the Council on Scientific Assembly maintained an office in the Scientific Exhibit, from which the staff administered all scientific activities. The Secretary of the Council also acted as director of the Scientific Exhibit with a desk easily available to all scientific exhibitors and visitors alike.

At the Clinical Meeting in Minneapolis, the Staff was divided for the first time, with demonstrators' badges for the Scientific Exhibit being distributed in the General Registration area. This required a somewhat larger force than previously, when all administrative activities were carried on in one place.

Section Papers and Minutes.—Section papers and minutes of the Section business meetings were delivered to the staff at Atlantic City by each Section Secretary. The papers, with approval slips, were turned over to the Editor of The Journal. The minutes of the Sections were assembled and prepared for publication in The Journal.

Deadlines.—The staff arranged a series of deadlines for various activities during the year.

Aug. 1. Applications closed for space in the Scientific Exhibit at the Minneapolis Meeting.
Sept. 1. Program copy for the Minneapolis Meeting was due.
Sept. 15. Preliminary program submitted for Convention Number of The Journal.
Sept. 25. Applicants for space in Scientific Exhibit notified of decision of Committee.
Oct. 15. Meeting with Section Secretaries, when preliminary plans for Atlantic City were announced.
Nov. 21. All material for shipment to Minneapolis to be ready.
June 5. Deadline for assembling material for shipment to Atlantic City.

Minneapolis Clinical Meeting.—The Minneapolis Clinical Meeting was eminently successful from a scientific standpoint. All activities were well attended, and there was a general feeling of enthusiasm throughout the week. There were 224 presentations of all types—lectures, panels, symposiums, motion pictures, color television, breakfast conferences, scientific exhibits, and special demonstrations. The total participants numbered 519 of which 35 were on the program two or more times. Only 30% of the participants came from the Minneapolis-St. Paul area.

There were four meeting rooms with programs in progress simultaneously, morning and afternoon. Lectures were presented in one room, panel discussions in another and color television in the third room. Symposiums were presented in the fourth room each morning and motion pictures each afternoon. At the same time, demonstrations in the Scientific Exhibit were conducted continuously in 120 exhibits.

Many features of the meeting were worthy of mention. The ten breakfast conferences, presented at a Clinical Meeting for the first time, were sufficiently well attended to deserve repetition. The Trans-Atlantic Conference, with the British Medical Association, was a distinct success, with a clinical pathological conference on chest disease. Panels in Southampton and in Minneapolis discussed the subject to capacity audiences in both places. Spectacular exhibits on the history of medicine in the Minnesota area were arranged by Dr. Thomas A. Peppard, Minneapolis, and attracted much attention. Demonstrations on the problems of delivery, under the auspices of Dr. Mancel T. Mitchell, Minneapolis, were presented eight times during the week. The special exhibit on fractures, presented by a committee headed by Dr. Ralph G. Carothers, Cincinnati, as chairman, attracted the usual large audience.

A diversified program, such as was presented in Minneapolis, is of necessity the product of various individuals with specialized experiences. The staff wishes to express appreciation to members of the local committee, especially to Dr. O. L. Norman Nelson, General Chairman, who kept the whole program moving; to Dr. N. L. Gault Jr., who produced an outstanding program that taxed the capacity of the meeting halls most of the time; to Dr. James R. Fox, for the color television program and the Trans-Atlantic conference; and to Mr. Thomas P. Cook, Executive Secretary of the Hennepin County Medical Society, Minneapolis, for his continued assistance with the many details incidental to the planning of the program.

Annual Meeting–Atlantic City.—Meetings in Atlantic City are always well attended, and the one in 1959 attracted a large number of physicians. The headquarters for scientific activities was the commodious Convention Hall, but some of the Section meetings were held in nearby hotels along the boardwalk and easily reached. Attendance at most Section meetings was satisfactory.

The General Scientific Meetings on Monday afternoon and Tuesday morning, devoted to diseases of the blood, were especially popular. The 21 Sections of the Scientific Assembly held 56 meetings, nine of which were joint sessions—in most cases two or three Sections meeting together. In one instance six Sections conducted a joint symposium on hepatic diseases and at another time seven Sections presented a joint symposium on childbirth. Both of these features attracted large audiences and laid the pattern for similar activities in the future. The Section on Military Medicine experimented with a program that combined various audiovisual features with the lecture program. There were 276 individual lectures, 19 panel discussions, and 14 symposiums presented by the Sections.

Centennial ceremonies were conducted by seven Sections: Experimental Medicine and Therapeutics, Internal Medicine, Nervous and Mental Diseases, Obstetrics and Gynecology, Pathology and Physiology, Preventive Medicine and Surgery. Guest speakers included Mr. Andrew Claye, Leeds, England, President of the Royal College of Obstetricians and Gynecologists, Dr. J. N. Morris, London Hospital Research Laboratories, and Dr. R. R. Coombs, Department of Pathology, University of Cambridge, Cambridge, England.

Color television programs were presented each morning and afternoon throughout the week. A feature was the repetition of a surgical clinic by Dr. I. S. Ravdin presented at the first color television program ten years previously. Appreciation is extended to Atlantic City Hospital for its cooperation and to Smith, Kline & French Laboratories, Philadelphia, for sponsoring the program.

Motion pictures were shown continuously throughout the week, covering all phases of medicine. In many instances, there was a discussion of the film by the author, which added interest for appreciative audiences. A special feature was an evening program on hospital sepsis with discussions of the motion picture by outstanding authorities.

The Scientific Exhibit included 385 exhibits of which 352 were shown under Section auspices. The special exhibits conducted by Sections were especially attractive. Pulmonary function was presented by the Section on Diseases of the Chest and fresh tissue pathology by the Section on Pathology and Physiology.

Physical examinations of physicians attending the meeting were conducted by the Section on General Practice with the assistance of cardiologists and radiologists. The National Tuberculosis Association made 802 chest x-rays of which 18% showed some abnormality. More than 1,000 electrocardiograms were taken, of which 22% of the cases were abnormal.

Other features included the special exhibit on fractures, which was as popular as ever. The question and answer conference on diabetes was conducted continuously, with no time out for lunch, to an ever present, interested audience. In addition, there was a question and answer conference on diet and an exhibit symposium on arthritis and rheumatism, both of which were highly successful.

Awards in the Scientific Exhibit included 6 medals, 23 certificates of merit, 25 honorable mention certificates and 2 certificates of appreciation. In addition, awards were made for medical illustration and medical photography. The Section on Urology presented the John H. Morrissey Award and the Section on Ophthalmology an award of $250 to the best exhibit in the respective Sections.

Total participants in the scientific program numbered about 2,000, coming from 43 states and the District of Columbia, as well as from 14 foreign countries.

The staff appreciated the cooperation and unstinted contribution of time and effort on the part of Section officers, various special committees and numerous participants in the program at Atlantic City. Their patience and cordiality, often under trying circumstances, made the problem of administering the meeting infinitely easier.

Cooperation with A. M. A. Divisions.—Cooperation was maintained constantly with the various departments of the Association throughout the year in matters pertaining to the scientific program at the Annual and Clinical Meetings.

Business Division: Circulation and Records Department.—The staff checked the eligibility of all participants in the scientific program with the Records Department which included some 2,000 names on the program for the Annual Meeting and some 475 names for the Clinical Meeting. During the Annual and Clinical Meetings, close contact was maintained with this department in connection with registration problems of scientific exhibitors, Section officers, invited guests, etc.

Convention Services Department.—The staff cooperated with the Convention Services Department relative to all services incidental to the smooth operation of the scientific program at both meetings, which included technical arrangements for meeting rooms as well as the Scientific Exhibit; arrangements for hotel accommodations for Section officers, special demonstrators in the Scientific Exhibit and program participants, Council members and staff; transportation of staff to the meetings, as well as shipment of all ipment; employment of personnel to serve as ushers in meeting rooms, patients in the Scientific Exhibit, as well office assistants, messengers, and many other details involved in running the meeting.

Industrial Exhibits.—The staff continued its cordial relationship with the Industrial Exhibit staff.

Operating Services Department.—The staff cooperated with the Operating Services Department in matters pertaining to the production of the Scientific Programs and other material necessary for the meetings.

Communications Division: Press Relations.—The staff cooperated with the Press Department concerning publicity for the program. It supplied names and addresses of all speakers and scientific exhibitors, as well as titles of papers, panel discussions, etc., and abstracts when needed.

Program Development.—The staff cooperated with this new department in the Communications Division in helping to develop publicity for the scientific program in the best manner possible. It furnished highlights of the program for inclusion in advertisements which were published in THE JOURNAL, and offered its services whenever needed.

AMA News.—The staff continued to cooperate with the *AMA News* staff throughout the year.

Special Services.—The staff enlisted the service of the Special Services Department in making the cover for the Scientific Program for the Annual Meeting. The Council staff also continued to cooperate with this department in supplying material for the preliminary summary for the Annual Meeting.

Daily Bulletin.—The staff continued to cooperate with the Editor of the Daily Bulletin for the Annual as well as the Clinical Meeting. It supplied as much scientific program material as possible and the complete report of the Committee on Awards at the Annual Meeting.

Scientific Activities Division.—The staff continued to avail itself of the services of the various councils and committees under this division. Confidential opinions were received on certain applicants for space in the Scientific Exhibit at both the Annual and Clinical Meeting. Various members of these councils were asked to check over the Scientific Exhibits at the meetings. The Bureau of Investigation checked all applications for space in the Scientific Exhibit to make certain that none appeared in their files. These services were much appreciated by the Council staff.

The Council also cooperated with the Council on Foods and Nutrition in presenting excellent exhibits at both the Annual and Clinical Meetings as well as Diet Conferences at the Annual Meeting, and with the Committee on Cosmetics presenting a session on Cutaneous Facial Disfigurement under the Section on Miscellaneous Topics at the Annual Meeting.

Scientific Publications.—The Council furnished the Editor of THE JOURNAL with copy for the Convention Number of THE JOURNAL for both the Annual and Clinical Meeting for the preliminary scientific program. It also furnished material, from time to time, for notices calling attention to the forthcoming program. During the Annual Meeting, the staff collected all of the papers which were read before the General Scientific Meetings and Section meetings, together with the approval slips, and turned them over to the Editorial Department for publication in THE JOURNAL or one of the special journals.

Socio-Economics Division.—The staff continued to cooperate with the various councils and departments in this division with either scientific exhibits or scientific programs. It cooperated with the Committee on Aging of the Council on Medical Service in presenting a full day's program on aging under the Section on Miscellaneous Topics at the Atlantic City Meeting in June.

Attendance at Other Meetings.—During the year the Secretary of the Council attended various meetings over the country, participating on some of the programs. He read papers at the meeting of the Northwest Conference on Diseases Transmitted by Animals, in Hamilton, Montana, and at the meeting of the Medical Writers Association in Chicago. He conferred with the Committee on Section Work of the Southern Medical Association in New Orleans, and served on the Committee on Awards of the American Academy of Ophthalmology and Otolaryngology in Chicago. He participated in panel discussions at the meeting of the Association of Medical Illustrators in Dallas and the meeting of Professional Convention Managers Association at Bal Harbour, Fla. Other meetings included the Academy of General Practice in San Francisco, the American Public Health Association in St. Louis, and the American Academy of Orthopedic Surgery in Chicago.

COMMITTEE ON COSMETICS

Committee Activities

The Committee on Cosmetics continued to function in an educational and liaison capacity between the medical profession, the cosmetic industry and the public in a rapidly expanding area with broadening medical implications. In 1958, well over 2 billion dollars were spent by the American public on cosmetics and allied preparations which represent the products that come within the direct purview of the Committee on Cosmetics. More significant than increasing volume alone is the trend toward the incorporation of drugs into products merchandized as cosmetics and accepted and used by the public as such. The concept of a cosmetic as a product containing only physiologically inert ingredients is becoming more historical than real. In spite of the changing character of these products there are no legal requirements for the pre-testing of new cosmetics. However, concern for public health is reflected in the introduction into the 86th Congress of two bills whose purpose is to provide for the safety of chemicals in cosmetics. A second trend of growing concern to the Committee is the increased amount of misinformation on the basic physiology of the skin and the cutaneous effects of cosmetic chemicals directed to the public through mass media advertising.

Educational Activities.—The symposium reports, exhibits, and pamphlets which the Committee sponsors are intended primarily to serve in the continuing education of the physician. Although the medical profession is the major target, experience has shown that scientists in areas allied to medicine and those in industry have been enlightened and stimulated by the Committee's educational activities. The public has been reached through widespread mass media publicity of published material and through articles published in *Today's Health.*

Symposiums.—The American Association for the Advancement of Science has published in monograph form the third symposium of the Committee on Cosmetics which was presented before the Medical Sciences Section of that Association. This monograph "The Human Integument" is edited by Dr. Stephen Rothman, Chairman of the Committee. The 12 papers in the monograph represent a Committee endeavor to call attention to the impact of the basic biological sciences on the progress of medical science. It is intended to show that research in cutaneous physiology and its application to clinical dermatology has produced new ideas and knowledge which will improve patient care. The papers evolve about four major issues: (1) the protective function of the skin, (2) circulation and vascular reactions, (3) sebaceous gland secretion, and (4) pathogenic factors in premalignant conditions and malignancies of the skin.

The fourth symposium of the Committee was held during the Annual Meeting of the A. M. A. in Atlantic City, June 9, 1959. This symposium "The Management of Cutaneous Facial Disfigurement" was planned to promote one of the Committee's major objectives; namely, to alert the medical profession to the severe psychological implications of conditions characterized by temporary or permanent skin disfigurement.

A summary of the symposium papers was published in The Journal (170:1194 [July 4] 1959) and the complete papers will appear in The Journal in the near future as *reports to the Committee.*

The fifth symposium of the Committee will be presented at the Clinical Meeting of the A. M. A. in Dallas on Dec. 2, 1959. The program "Sunlight and the Skin" was selected because of the significance of cutaneous exposure to solar radiation in this geographical area. Drs. Stephen Rothman and Raymond R. Suskind will serve as co-chairmen. The program will include the following papers: The Physical Factors in Sun Exposures, The Physiological and Pathological Changes in Sunburning and Suntanning, The Pathogenesis of Solar Hypersensitivity, Cutaneous Diseases Provoked or Aggravated by Sunlight, The Sunlight Factor in Aging and Skin Cancer, The Medical and Cosmetic Uses of Solar Radiation and U.V.L., The Prevention and Management of Harmful Effects Induced by Sunlight—Physical and Chemical Sunscreens and The Use and Abuse of the Psoralens. Speakers will include: Drs. Farrington Daniels, Jr., Allan L. Lorincz. James B. Howell, John M. Knox and Samuel Wm. Becker, Jr., Harold Blum, R. L. Baer, Kenneth Burdick.

Exhibits.—The Committee in cooperation with the Communications Division has under construction a new exhibit "Sunlight and the Skin," which is intended for professional audiences and will cover such phases of the problem as the effects of chronic and acute exposures and the pathogenesis of ultraviolet rays. This new exhibit will be shown for the first time at the Clinical Meeting in Dallas in December. The Committee also has under consideration at the present time a second exhibit which will concern dermatitis caused by various types of cosmetics.

Pamphlets.—Two pamphlets are being prepared to supplement the exhibit "Sunlight and the Skin." The first is a composite of two reports already published by the Committee on the medical significance of solar radiation. The second pamphlet, written for the public, will be provided to viewing physicians for distribution in their offices. This pamphlet will include instructions on a safe way to achieve skin tanning with special emphasis on the consequences of overexposure to the skin's health and appearance.

Reports.—The Committee communicates to the medical profession at large through its reports published in The Journal. These are frequently written by individual Committee members on topics which are particularly timely and significant. Two such reports have been published recently. They are: "Suntanning—Potentiation with Oral Medication" and "Inclusion of Antibiotics in Cosmetic Preparations." Two reports on hirsutism are awaiting publication; namely, "The Diagnosis and Management of Hirsutism" and "Electrolytic Methods in the Management of Hirsutism." Nearing completion are a Committee statement on the use of drugs in cosmetics and a status report on the safety of aerosol hair lacquer sprays. Reports to the Committee under consideration at the present time are eight papers presented at the Committee's most recent symposium "The Management of Cutaneous Facial Disfigurement." The Committee has, during the past year, given permission to the editor of *Boletin de la Sociedad Cubana de Dermatologia* to publish all of its reports in this professional journal.

Liaison Activities.—Individual Committee members have demonstrated their interest in increased cooperation with the toilet goods industry toward the mutual goal of providing the public with safe and effective products. They have actively participated in and assisted with the programs for meetings and seminars sponsored by industry scientists. As participants, Committee members have stressed the importance of the basic sciences in the research and development of effective, safe cosmetics. In recognition of their contributions, this year the Society of Cosmetic Chemists has for the second time honored a member of the Committee with its special $1,000 award. Four such awards have been made by the Society. Of these, two recipients have been members of the Committee on Cosmetics. Both Dr. Irvin H. Blank, this year's recipient, and Dr. Stephen Rothman, the first award winner in 1955, were honored for their research in the biochemistry and physiology of the skin. Individual members also promote Committee objectives through their activities in such professional and scientific organizations as the Society for Investigative Dermatology, the American Pharmaceutical Association, the American Academy of Dermatology and Syphilology and the Academy of Allergy. Individual members serve in an advisory capacity to the Better Business Bureau and have most recently assisted tha group in an evaluation of home electrolysis machines. They are now cooperating with the Bureau of Medicine of th Food and Drug Administration in a study of the problem associated with the use of antiperspirants.

Staff Activities

The staff of the Committee on Cosmetics consists of its Secretary, Veronica L. Conley, Ph.D., a research assistant and a clerical staff of two.

The Secretary is responsible for the administration of the Committee's program which includes the accumulation, preparation, and dissemination of its educational material and for the direction of the Committee's investigational and service activities.

Investigational Activities: Surveys.—The Secretary this year concluded a two-year study of resistance to inaccurate advertising claims among nurses, physicians' wives, *Today's Health* readers and average women. The Secretary was responsible for the development and pre-testing of the questionnaire, the preparation of the returned questionnaires for IBM tabulations and the interpretation and analysis of the findings. The results of this study will be published soon as a Report to the Committee. The purpose of this study was to obtain some measure of the success of health education efforts in regard to the safety and effectiveness of cosmetic hormone creams among health oriented groups as compared with average women.

Total participants in the scientific program numbered about 2,000, coming from 43 states and the District of Columbia, as well as from 14 foreign countries.

The staff appreciated the cooperation and unstinted contribution of time and effort on the part of Section officers, various special committees and numerous participants in the program at Atlantic City. Their patience and cordiality, often under trying circumstances, made the problem of administering the meeting infinitely easier.

Cooperation with A. M. A. Divisions.—Cooperation was maintained constantly with the various departments of the Association throughout the year in matters pertaining to the scientific program at the Annual and Clinical Meetings.

Business Division: Circulation and Records Department.—The staff checked the eligibility of all participants in the scientific program with the Records Department which included some 2,000 names on the program for the Annual Meeting and some 475 names for the Clinical Meeting. During the Annual and Clinical Meetings, close contact was maintained with this department in connection with registration problems of scientific exhibitors, Section officers, invited guests, etc.

Convention Services Department.—The staff cooperated with the Convention Services Department relative to all services incidental to the smooth operation of the scientific program at both meetings, which included technical arrangements for meeting rooms as well as the Scientific Exhibit; arrangements for hotel accommodations for Section officers, special demonstrators in the Scientific Exhibit and program participants, Council members and staff; transportation of staff to the meetings, as well as shipment of all equipment; employment of personnel to serve as ushers in the meeting rooms, patients in the Scientific Exhibit, as well as office assistants, messengers, and many other details involved in running the meeting.

Industrial Exhibits.—The staff continued its cordial relationship with the Industrial Exhibit staff.

Operating Services Department.—The staff cooperated with the Operating Services Department in matters pertaining to the production of the Scientific Programs and other material necessary for the meetings.

Communications Division: Press Relations.—The staff cooperated with the Press Department concerning publicity for the program. It supplied names and addresses of all speakers and scientific exhibitors, as well as titles of papers, panel discussions, etc., and abstracts when needed.

Program Development.—The staff cooperated with this new department in the Communications Division in helping to develop publicity for the scientific program in the best manner possible. It furnished highlights of the program for inclusion in advertisements which were published in The Journal, and offered its services whenever needed.

AMA News.—The staff continued to cooperate with the *AMA News* staff throughout the year.

Special Services.—The staff enlisted the service of the Special Services Department in making the cover for the Scientific Program for the Annual Meeting. The Council staff also continued to cooperate with this department in supplying material for the preliminary summary for the Annual Meeting.

Daily Bulletin.—The staff continued to cooperate with the Editor of the Daily Bulletin for the Annual as well as the Clinical Meeting. It supplied as much scientific program material as possible and the complete report of the Committee on Awards at the Annual Meeting.

Scientific Activities Division.—The staff continued to avail itself of the services of the various councils and committees under this division. Confidential opinions were received on certain applicants for space in the Scientific Exhibit at both the Annual and Clinical Meeting. Various members of these councils were asked to check over the Scientific Exhibits at the meetings. The Bureau of Investigation checked all applications for space in the Scientific Exhibit to make certain that none appeared in their files. These services were much appreciated by the Council staff.

The Council also cooperated with the Council on Foods and Nutrition in presenting excellent exhibits at both the Annual and Clinical Meetings as well as Diet Conferences at the Annual Meeting, and with the Committee on Cosmetics presenting a session on Cutaneous Facial Disfigurement under the Section on Miscellaneous Topics at the Annual Meeting.

Scientific Publications.—The Council furnished the Editor of The Journal with copy for the Convention Number of The Journal for both the Annual and Clinical Meeting for the preliminary scientific program. It also furnished material, from time to time, for notices calling attention to the forthcoming program. During the Annual Meeting, the staff collected all of the papers which were read before the General Scientific Meetings and Section meetings, together with the approval slips, and turned them over to the Editorial Department for publication in The Journal or one of the special journals.

Socio-Economics Division.—The staff continued to cooperate with the various councils and departments in this division with either scientific exhibits or scientific programs. It cooperated with the Committee on Aging of the Council on Medical Service in presenting a full day's program on aging under the Section on Miscellaneous Topics at the Atlantic City Meeting in June.

Attendance at Other Meetings.—During the year the Secretary of the Council attended various meetings over the country, participating on some of the programs. He read papers at the meeting of the Northwest Conference on Diseases Transmitted by Animals, in Hamilton, Montana, and at the meeting of the Medical Writers Association in Chicago. They are now cooperating with the Bureau of Medicine of the Food and Drug Administration in a study of the problems associated with the use of antiperspirants.

Staff Activities

The staff of the Committee on Cosmetics consists of its Secretary, Veronica L. Conley, Ph.D., a research assistant and a clerical staff of two.

The Secretary is responsible for the administration of the Committee's program which includes the accumulation, preparation, and dissemination of its educational material and for the direction of the Committee's investigational and service activities.

Investigational Activities: Surveys.—The Secretary this year concluded a two-year study of resistance to inaccurate advertising claims among nurses, physicians' wives, *Today's Health* readers and average women. The Secretary was responsible for the development and pre-testing of the questionnaire, the preparation of the returned questionnaires for IBM tabulations and the interpretation and analysis of the findings. The results of this study will be published soon as a Report to the Committee. The purpose of this study was to obtain some measure of the success of health education efforts in regard to the safety and effectiveness of cosmetic hormone creams among health oriented groups as compared with average women.

The Secretary completed a survey of all inquiries received over a period of the past seven years with classifications according to source and subject. This was done to determine what subjects are of greatest interest to the profession and the public.

Library Research.—The Committee operates in a sphere of activity where no single comprehensive literature exists. Consequently, data pertinent to skin function and care with emphasis on the role of cosmetics or allied products must be accumulated from a number of medical, scientific and trade sources. For the purpose of keeping a comprehensive and current file of information, 300 journals are checked regularly. Abstracts, reprints, and references are accumulated and a readily accessible file is available for the staff and Committee members. The reference files had grown in a 10-year period to an unmanageable size. Therefore, during the past year, the files were thoroughly studied with a view to removing all extraneous and outdated information. All material was reclassified into specific sections which experience has shown would render the files most accessible and useful.

The information in these files is used regularly as a basis for Committee statements, for replies to the Question and Answer Section of The Journal, and for the advisory service provided to such groups as the Bureau of Health Education, the A. M. A. Library, and the Better Business Bureau.

Educational Activities: Today's Health Articles.—The Secretary has during the past year written three articles for *Today's Health.* These represent the final articles in a seven-year monthly series of educational pieces on skin health and appearance. Reprints of the 90 articles have been bound in loose leaf form.

Committee Reports.—The Secretary is responsible for writing educational material published as reports to the Committee. These reports are then reproduced in the Committee Bulletin and must be unanimously accepted before they may be published. A report on the use of electrolytic methods for the permanent correction of hirsutism is awaiting publication. The Secretary is now writing a statement on the use of drugs in cosmetics and a status report on the safety of aerosol hair sprays.

A summary of the papers of the recent symposium of the Committee "The Management of Cutaneous Facial Disfigurement" presented at the Annual Meeting in Atlantic City was prepared for publication. It appeared in the Organization Section of the July 4th issue of The Journal.

Introductory Statements.—The Secretary wrote the introduction to the monograph "The Human Integument" a symposium sponsored by the Committee on Cosmetics and published recently by the American Association for the Advancement of Science. The introduction focuses on the purpose of the symposium; namely, to help the physician maintain close contact with developments in the basic biological sciences which have an ever increasing impact on the progress of medical sciences.

Introductory statements are written to precede all reports published in The Journal. In these preliminary remarks, the important issues in the subsequent report are emphasized as well as the Committee's purpose in authorizing publication.

Editorials.—The Secretary wrote an editorial entitled "Suntanning" to accompany the Committee Report "Suntanning—Potentiation with Oral Medication." An editorial is prepared for publication at the same time as a report whenever the Committee is of the opinion that the issues in the report warrant special attention.

Exhibits.—The Secretary is preparing the format of the exhibit "Sunlight and the Skin" which will be presented for the first time at the Dallas meeting.

Pamphlets.—Two pamphlets to accompany the foregoing exhibit "Sunlight and the Skin" are under preparation. The first pamphlet will be a supplement to the exhibit and is directed to the medical profession.

The second pamphlet is written for the public and will be presented to physician viewers for distribution to their patients.

Service Activities.—The Secretary has completed five years of service as a member of the Editorial Board of *The Journal of the Society of Cosmetic Chemists.* During the past year she served as a member of a joint committee of the National Education Association and the A. M. A. in the preparation of a booklet "As Others See Us." The Secretary regularly serves in a consultant capacity to the National Better Business Bureau and its local branches, to various state and medical societies, and to radio and television stations, newspapers, and magazines regarding the acceptability of advertisements. Advice on the scientific soundness and timeliness of material is given to physician writers and free lance writers. Reference material is often provided to advertising agency research departments, librarians in the pharmaceutical and cosmetic industries, and writers. The Secretary serves in a consultant capacity to the A. M. A.'s Bureau of Health Education, Question and Answer Department of The Journal, the Department of Investigation, the Council on Scientific Assembly, and the Advertising Committee.

The Secretary maintains close contact with the Toilet Goods Association and participates in a frequent exchange of information with that group. Meetings of this Association, closed to all but industry members, are attended by the Secretary as an invited guest. The Secretary is also regularly invited to meetings of the American Academy of Dermatology and the Society for Investigative Dermatology.

COMMITTEE ON MEDICOLEGAL PROBLEMS

Committee Activities

This report covers the activities of the Committee during the period July 1, 1958, through June 30, 1959. During this period, two meetings were held; Dr. Herman Heise was elected chairman to succeed Dr. Alan Moritz, who resigned from the Committee, Dr. Russell Fisher was appointed to the Committee to replace Dr. Moritz, and Mr. George E. Hall of the Law Division staff was designated as Executive Secretary.

Forensic Pathology.—One of the principal activities of the Committee relates to the improvement of the caliber of medicolegal investigations throughout the country. Hoping to further this objective, the Committee worked with the Law Division in the preparation and shooting of a medicolegal film entitled "A Matter of Fact." The film, shown for the first time at the American Bar Association meeting in Miami Beach, Florida, in August, 1959, demonstrates clearly and emphatically how a medicolegal autopsy performed by a trained forensic pathologist can improve the administration of justice. In the example given, a medical examiner was able to establish the innocence of a young man who, on the basis of a coroner's investigation, would probably have been found guilty of the murder of his wife.

Chemical Tests for Intoxication.—The manual on Chemical Tests for Intoxication is nearing completion with but the finishing touches on one chapter yet remaining. In the meantime, a number of the scientific chapters of the manual have been published in The Journal. The number of requests for reprints of these chapters indicates that the manual will be a popular one.

Many toxicologists have suggested that, according to scientific evidence, the upper limit of prima facie intoxication should be lowered from 0.15% to 0.10%. This recommendation will be studied during the coming year.

So far as highway safety in general is concerned, the Committee discussed the point system now being used in some states with respect to traffic violations. The system consists of a series of demerits against the violator which may eventually result in suspension of his license. The Committee voted to express its approval of the point system to the Committee on Medical Aspects of Automobile Injuries and Deaths.

Professional Liability.—The Committee is in the process of trying to develop a system for studying certain hazardous fields of practice and making recommendations to the practicing physician concerning his activities in such fields. Included are: the use of tetanus prophylaxis, the use of X-ray in periodic examinations and the promiscuous use of antibiotics. In addition to this study, the Committee is desirous of collecting all the information it can about the misuse of expert medical testimony in court. It urges physicians encountering this problem to report the situation to the Committee Secretary at the headquarters office.

Medicolegal Education.—A survey of the medical schools to determine the extent to which medicolegal courses are being given to medical students has been completed.

The Committee is in the process of working out a program of postgraduate medicolegal education which may be adapted to the needs of local medical societies throughout the country.

Blood Grouping Tests and Blood Transfusions.—An effort is being made to determine standards which may be used by those attempting to locate an expert in the field of blood grouping. The Committee feels that any list of laboratories purporting to be able to perform blood grouping tests should be carefully scrutinized so that attorneys needing such specialists will not be misled.

A member of the Committee attended a meeting with the Council on Professional Practices Committee of the AHA and assisted in the development of guides to be used when a patient's religion prohibits the transfusion of blood.

Retention of Body Tissue.—It was called to the attention of the Committee that the office of the coroner in Los Angeles was having trouble because the legal counsel of the Board of Supervisors was enforcing a ruling that it is improper to retain any tissues from the bodies of the dead for more than three days. In the opinion of the Committee this is incompatible with the practice of pathology. The Committee adopted a resolution recommending that the Board of Trustees of the American Medical Association communicate with the appropriate authorities in Los Angeles emphasizing the impossibility of doing adequate chemical studies without the indefinite retention of tissues and fluids to detect the causes of industrial, accidental, and suicidal deaths.

COMMITTEE ON PESTICIDES

Committee Activities

This is the 10th annual report of the Committee on Pesticides. The following is a résumé of its more important activities and accomplishments during the past year.

Educational Activities.—The series of Committee reports has been extended to 25 with the publication of a report on "Morbidity and Mortality from Economic Poisons in the United States." This report is based on an analysis of 37,000 incidents of poisoning reported by poison control centers, industrial commissions, and state departments of health for a two-year period.

A review of the health hazards of dieldrin to public health workers engaged in disease vector control has been finalized and is being readied for publication. Several hundred cases of poisoning from various parts of the world were evaluated in the light of pharmacologic and toxicologic data available on this chlorinated hydrocarbon insecticide. The first report of a case of accidental ingestion of this material was just received from Israel and is being edited for publication as a clinical note to accompany the review in the committee's section in The Journal.

The Committee has been invited to participate in organizing a symposium on Accidental Poisoning at the next Annual American Medical Association Meeting. The program is to include "question and answer" type of presentations including those related to farm safety and the hazards of pesticides around the home.

Service Activities.—The Committee on Pesticides collaborated with other groups and organizations during the past year. The United States Public Health Service requested the Committee to participate in the revision of its booklet entitled "Clinical Memoranda on Economic Poisons." In this connection, case histories and pharmacological data are presently being compiled on endrin, phosdrin, and D. D. V. P. which are newly introduced economic poisons.

The Committee continues to cooperate with the American Standards Association in the selection of generic names for pesticides. During the past year, coined common names for several new pesticidal chemicals were considered and recommendations made on names proposed by the International Standards Association for items entering foreign commerce.

A proposal to form a new council was considered. The recommendations of the Council on Drugs which stated that the work of the Committee on Pesticides could be strengthened by combining it with the Committee on Toxicology to form a Council to study toxicology and other environmental health problems were reviewed and a special subcommittee was appointed to deal with technical problems involving amalgamation and council status.

The Committee in cooperation with the National Agricultural Chemicals Association announced the availability of a 64 page booklet "Open Door to Plenty" in March, 1959 in The Journal and the *AMA News*. The booklet is designed to tell the story of how pesticides are used to protect food, property and health. An average of 100 requests a week has been received from physicians and over 14,000 copies have been distributed through all sources to date.

Staff Activities

The staff of the Committee on Pesticides was engaged in the following activities during the past year:

Educational Activities: Publications.—The following reports were prepared for publication "Morbidity and Mortality from Economic Poisons in the United States" (*Arch. Ind. Health* 18:126 [Aug.] 1958) and "Studies on Chemical Protection Against Lethal Action of Parathion" (*Arch. Inter. de Pharm. et de Therapie* 116:375 [Sept.] 1958).

Three confidential bulletins comprising over 100 pages of transactions of Committee business were prepared by the office staff for circulation among the members of the Committee on Pesticides. A fourth bulletin has been prepared for mailing to the membership. Among the topics submitted for discussion are: adipose tissue storage of DDT; hazards of pesticide spraying programs; proposed amendment to the Federal Pesticide Act; suspected pesticide fatality. A report was also presented on the Kerala (India) food poisoning episode in which 106 deaths and 400 nonfatal injuries were attributed to parathion contaminated flour.

Reprints.—The Committee on Pesticides in cooperation with the National Agricultural Chemicals Association announced the availability of a 64-page booklet entitled "Open Door to Plenty" in recent issues of The Journal of the American Medical Association and the *AMA News*. The booklet is designed to tell the story of how pesticides are used to protect food, property, and health. An average of 100 requests a week have been received from physicians and over 14,000 copies have been distributed through all sources to date.

Since the publication of the Committee report "Morbidity and Mortality from Economic Poisons in the United States" over 4,000 reprints have been distributed. An additional 1,000 reprints have been ordered to meet current and anticipated requests for this publication.

Reprints of Committee reports and other staff publications have been bound in loose-leaf form for sale, at cost, to interested persons and for free distribution to medical school libraries. Twenty-five Committee-sponsored reviews which appeared in American Medical Association publications and 18 additional reports published in other scientific periodicals were bound in this form.

Information Services.—A new project was initiated to extend the Committee's information services and is directed towards the preparation of 5"×8" pesticide poisoning information cards. One hundred information cards have been prepared. These provide basic information in concise form on chemicals found in pesticide products. Data furnished on these cards include the common and chemical name of the poisonous ingredients; trade name; type of product (formulation in which the chemical is used); physical and chemical properties and uses; principal hazards and toxicity rating; symptoms and treatment of poisoning; and the present status of its use in agricultural and home environment. These cards are to be made available for use by poison control centers and for pharmacology departments and other teaching staffs in medical schools, pharmacy schools, and colleges of agriculture.

In the same connection, the Committee staff assisted in the preparation of a lecture series on problems arising from the use of drugs and chemicals in agriculture by a former Committee member currently lecturing at Cornell University. The series consists of lectures on the use of estrogenic substances in clinical medicine, in animal and poultry production and residues in meat and plant products; feed and food residues from arsenicals in animals and plant products; antibiotic residues in milk and animal products; veterinary clinical problems in the use of antibiotics; pharmacologic effects in tranquilizers and miscellaneous drugs in domestic animals; and problems in the use of coccidiostats and anthelmintics. The foregoing subjects represent a new field of interest for Committee activity and broadening the base of our information services in these areas is now being studied.

The Committee has been asked by the ad hoc committee on clinical toxicology, which is revising the "Standard Nomenclature of Diseases and Operations," to review a draft of the section concerned with the classification of economic poisons. A provisional list of 212 pesticidal chemicals was reviewed in connection with the forthcoming edition of this publication.

The Florida Department of Agriculture has requested the Committee's review of the dangers involved in the unlimited registration of a household pesticide containing 1% parathion, a highly toxic insecticide ordinarily restricted to use in agriculture. The Committee was unanimous in its condemnation of the proposed registration and provided information and comments concerning the dangers involved.

The need for study of other toxicology problems in agriculture was brought to the attention of the Committee office by the Portuguese government which recently requested information on the etiology of nitrogen dioxide pneumonia in farmers caused by the fermentation of silage. The Institute Nacional Do Paõ requested the comments of the Committee and clarification concerning the chemical reactions involved in "silo-fillers disease" which has been reported from time to time in THE JOURNAL and other American Medical Association publications.

Service Activities.—The Committee on Pesticides collaborated with other groups and organizations during the past year on problems of mutual concern. It maintains close cooperation with the Inter-departmental Committee on Pest Control, Pesticides Regulations Section, United States Department of Agriculture and the Communicable Disease Center, United States Public Health Service. Through the Secretary, it is represented on the Sectional Committee on Common Names for Pest Control Chemicals (American Standards Association) and Liaison Panel, Food Protection Committee (National Research Council).

The Committee staff provided information and assistance to the Committee on Toxicology in the development of a model law to require precautionary labeling of hazardous substances. It reviewed existing labeling statutes, as applied to pesticides, and the members participated in the two American Medical Association legislative conferences on the labeling of hazardous substances.

During the past year, the Committee office was asked by physicians and private agencies to consider and render opinion on a variety of medico-economic problems involving the hazardous potentialities of pesticides. It considered problems such as prohibitive legislation against DDT; hazards of community fogging to counteract nuisance insects; optic neuritis, aplastic anemia, peripheral neuropathies and other syndromes with a history of exposure to pesticides. It also answered a growing number of telephone and mail inquiries. Representative of these inquiries are the following: directions for using ethylene oxide as a fumigant; the possibility of staph-pneumonia and granulocytopenia being associated with exposure to a household insecticide; experimental and clinical findings on the action of a dinitrophenol insecticide on nerve cells; and the possibility of a proprietary ant-roach product being the precipitating factor in peripheral neuritis and paresthesias of the extremities.

The Committee staff reviewed data pertaining to the hazards of mercurial fungicides. This review was undertaken at the behest of United States Public Health Service officials and firms marketing these products. Background data on the occupational hazards was already received from one firm. A survey has been initiated to determine occupational hazards of mercurial fungicides among workers involved in the manufacturing process and seed treatment. A literature search of published reports of injury was also undertaken. A report of findings is presently being prepared.

COMMITTEE ON REHABILITATION

Committee Activities

This is a report on the activities and decisions of the Intra-Association Liaison Committee on Rehabilitation, covering the period July 1, 1958, through June 30, 1959. The Committee is composed of representatives of the following: Council on Industrial Health, Council on Medical Education and Hospitals, Council on Medical Physics, Council on Medical Service, and Council on Mental Health.

The Committee on Rehabilitation held two meetings (in September, 1958, and March, 1959) during the 12-month period covered by this report. The Committee met with representatives of the U. S. Public Health Service Chronic Disease Program and the National Rehabilitation Association in order to discuss mutual rehabilitation interests and programs.

The U. S. Public Health Service booklet, "Strike Back at Stroke,". was reviewed and endorsed by the Committee.

A report was submitted to the Board of Trustees recommending that every constituent medical society which does not already have a committee on rehabilitation establish such a committee. The report also recommended that existing constituent society committees on rehabilitation which limit their activities to liaison and cooperation with state offices of vocational rehabilitation be encouraged to expand their activities. The report included a list of recommended guides for suggested activities and also contained a model questionnaire for use by a county medical society in surveying existing local rehabilitation services and facilities. The House of Delegates, at its December, 1958, meeting in Minneapolis, endorsed the recommendation that each constituent society establish a committee, if such a committee does not already exist, to carry out the recommended activities.

The Committee recommended to the Board of Trustees that the A. M. A. sponsor a motion picture on rehabilitation designed to (1) acquaint the practitioner with the magnitude of the rehabilitation problem from the standpoint of patients' needs and the opportunities that physicians have to increase their services by helping in the rehabilitation of their patients, (2) show the medical profession the techniques to organize medical and other phases of rehabilitation at the community level, (3) show by practical example how the practitioner can see to it that his patients receive these rehabilitation services which have been organized in the community, and (4) indicate the type of rehabilitation problems which warrant referring the patient to a comprehensive center. In this connection the film would show how the center can serve the patient while still respecting the referring physician's interest in his patient.

The Committee's recommendation was approved by the Board, and subsequently a script for the film, entitled "Rehabilitation Adds Life to Years" was approved by the Committee. It is expected that the film will be ready for showing by December, 1959.

The extent to which nonmedical aspects of rehabilitation should be included within a rehabilitation center was considered at a joint meeting of the Committee on Rehabilitation and the Committee on Medical and Related Facilities of the Council on Medical Service, particularly in relation to the section of the Hill-Burton Act which provides funds for the construction of hospital rehabilitation facilities.

At this joint meeting it was agreed that all services (i. e., medical, psychological, social, educational, and vocational) should be available in the community. However, it was not deemed essential that all services be contained in one building or unit. Centers of the multiple disability type were favored and the Committee decried the establishment of centers serving only a single type of disability. The Committee favored constructing rehabilitation centers in close geographical proximity to community hospitals and believed there should be good administrative liaison between the two facilities. The Committee opposed the establishment of "free-standing centers," i. e., centers not in close proximity geographically and administratively to community hospitals.

The Committee voted to ask individuals to prepare articles on pertinent aspects of rehabilitation for publication in THE JOURNAL for the information of the medical profession. The following papers have been approved for publication: (1) "The State-Federal Rehabilitation Program," (2) "Training in Physical Medicine and Rehabilitation," (3) "Social Service in Rehabilitation," and (4) "Psychiatric Rehabilitation."

At the request of the Council on Mental Health the Committee on Rehabilitation considered within the purview of its program inclusion of psychiatric problems involved in the care of children undergoing rehabilitation. It invited a physician to prepare a brief general article on this subject for inclusion in the series of articles sponsored by the Committee. In addition, the Committee decided to refer this special problem to the Council on Mental Health for development of a report containing recommendations on effective rehabilitation programs for children who are physically disabled, mentally ill, or emotionally disturbed, for use by the Committee on Rehabilitation in promoting this aspect of rehabilitation.

The Committee voted to include the following subjects in its series of articles intended for publication: "Paying for Rehabilitation," "Assessing Rehabilitation Services in a Metropolitan Area," "The Rehabilitation Program in Ontario for Occupational Injuries," and "The Role of the Medical Consultant in the State Rehabilitation Agency."

The Committee on Rehabilitation at the request of the Council on Legislative Activities, commented on certain items of legislation and recommended opposition to: H. R. 122, H. R. 3465, H. R. 1119, and S. 722, 86th Congress.

COMMITTEE ON RESEARCH

Committee Activities

The Committee on Research recommended that it be made autonomous and be separated from the Council on Drugs since there was an increased concern on the part of the A. M. A. in research and since the field of activity of the Committee on Research was developing differently from that of the the Council on Drugs. This recommendation was transmitted to the Council on Drugs and the Director of the Division of Scientific Activities where it is under study.

The establishment of a Subcommittee with a Registry concerned with the adverse reactions of drugs on the central nervous system patterned after the Subcommittee on Blood Dyscrasias and its Registry was recommended. This matter was considered by the Council on Drugs and transmitted to the Board of Trustees where it is now being reviewed.

A request from a group of gastroenterologists that a survey be made on the incidence of ulcerative colitis, ileitis, and regional enteritis in the United States was disapproved since the Committee felt that the problem could best be resolved by specialty groups or in a number of large active centers.

The Committee approved the publication of an article entitled, "Experimentation in Man" by Henry K. Beecher, M.D., professor of anesthesiology, department of anesthesiology, Harvard University Medical School and Massachusetts General Hospital.

Subcommittee on Publications.—Closer liaison between the Editor of THE JOURNAL, the Council on Drugs and the Committee on Research has been urged. This has been discussed with the Editor of THE JOURNAL and the Secretary of the Council on Drugs to avoid duplication of effort. Lists of titles of proposed articles dealing with basic science research would be exchanged between the three groups.

Subcommittee on Grants-in-Aid.—A more extensive program of research grants has been urged and during the past year 83 applications were processed and 71 awards were made.

Subcommittee on Breast and Genital Cancer.—The Subcommittee recommended the preparation of a compilation of all of the data accumulated in the Mammary Cancer Study in order to provide investigators in the field of cancer research with all of the statistical information derived in the Study and suggested that the material be distributed with the Report of the Study. This material is being prepared and will be ready for publication shortly.

The Subcommittee approved the recommendation that an editorial be prepared for THE JOURNAL and that it be published in the same issue as the final report. An editorial is being prepared by the Chairman of the Subcommittee.

Subcommittee on Diabetes and Pregnancy Wastage.—The Subcommittee recommended that the report forms used in the Diabetes and Pregnancy Wastage Study be revised with the help of a consultant statistician so that the information can be transposed to IBM punch cards for greater utility. The proposed revision is almost completed and will be ready for consideration at an early date.

The Subcommittee recommended that the investigators of the Diabetes and Pregnancy Wastage Study use gastric lavage on the infants of alternate cases delivered by cesarean section of diabetic and nondiabetic mothers to determine whether the procedure is worthwhile and harmless. This problem will be studied for a two year period before reaching any conclusion.

The Subcommittee recommended that we attempt to secure the cooperation of a Department of Obstetrics in a large West Coast hospital in order to have geographic distribution in the study. Arrangements will be made shortly to enlist the help of a Department of Obstetrics on the West Coast.

The Subcommittee agreed to hold its future annual meetings in conjunction with the meetings of the American

College of Obstetricians and Gynecologists to reduce the time away from their practices. The next annual meeting will take place on April 2, 1960, at Cincinnati.

Subcommittee on Blood Dyscrasias.—The Subcommittee recommended that the Registry on Blood Dyscrasias be expanded by wider distribution of the tabulation of the cases reported to it, and by inviting more physicians to submit reports on the cases that they have encountered. The tabulation has been distributed to state, county, and local medical societies; the libraries, and departments of medicine, pathology, pharmacology, pediatrics, neurology and psychiatry, of all the medical schools of the United States and Canada; and all of the hospitals in the United States.

The Subcommittee recommended preparation of an article and an editorial dealing with the development and work of the Registry on Blood Dyscrasias for publication in THE JOURNAL. The article and editorial appeared in the Aug. 15th issue of THE JOURNAL.

The Subcommittee recommended that a statement dealing with the subject of blood dyscrasias associated with chloramphenicol therapy be prepared and published in THE JOURNAL. A proposed statement has been transmitted to the Council on Drugs where it is being considered.

Staff Activities

Committee on Research.—Following the recommendations of the Committee on Research, the Food and Drug Administration was contacted and it was learned that their program for the reporting of adverse reactions to drugs has not developed any further than it had in 1956. This information was relayed to the Committee on Research and, at its Annual Meeting, the Committee voted to establish a Subcommittee on Adverse Reactions of Drugs on the Central Nervous System.

The recommendation that the Committee on Research be given autonomy was processed and forwarded to the Executive Vice-president for informal consideration. It was recommended that in the absence of complete information a full report on the subject be prepared. Subsequently, arrangements were made for a meeting of an ad hoc intramural Subcommittee on Program and Function in New York City on Feb. 18, 1959. The report of this meeting was reviewed and approved by the Committee on Research after which copies were transmitted to the Secretary of the Council on Drugs and the Director of the Division of Scientific Activities.

During 1958 the Secretary received letters from a number of outstanding gastroenterologists throughout the country suggesting that the Committee on Research undertake a survey on the rate of incidence of ulcerative colitis, ileitis, and regional enteritis in the United States because these conditions were increasing and represented a growing medical and economic problem. Some data was accumulated and presented to the Committee for its consideration. The Committee rejected the proposal on the basis that this type of problem could best be handled by specialty groups or in a few active large centers where such cases are seen.

Although the Subcommittee on Publications had been voted into existence there was considerable misunderstanding by the Chairman as to his authority and responsibility in connection with the activities of the Subcommittee. The Secretary discussed the matter with the Editor of THE JOURNAL and the Secretary of the Council on Drugs and every effort was made to avoid duplication by coordinating the lists of the proposed articles which each group was considering. Toward the end of 1958 the Chairman of the Subcommittee resigned because of the press of work and the Secretary offered to assume the responsibility for contacting the proposed prospective authors on the list but this suggestion was vetoed and the operation has been held in abeyance.

The Headquarters staff assisted in the editing and reproduction in the Committee on Research Bulletin of a manuscript by Dr. Henry K. Beecher entitled, "Experimentation in Man." When the Committee approved publication of Dr. Beecher's article the manuscript was forwarded to the Council on Drugs with the request that it be authorized for publication in THE JOURNAL (**169**:461-478 [Jan. 31] 1959).

Subcommittee on Breast and Genital Cancer.—The Secretary assisted the Subcommittee and its consultant biostatistician in the preparation of the final report and the compilation of the data of the Study of the use of steroids and hormones in the treatment of disseminated mammary carcinoma. The staff aided the Subcommittee in the preparation of tables, figures, graphs, and charts for both the final report and the compilation. It is hoped that compilation of the data will be completed in time so that it can be distributed with reprints of the Report.

Subcommittee on Diabetes and Pregnancy Wastage.—The Secretary has been working with one of the members of the Subcommittee on a proposed revision of all of the forms used in reporting the information in the Diabetes and Pregnancy Wastage Study. Consultation with a member of the Department of Biometrics at the University of North Carolina, Chapel Hill, has been undertaken and it is hoped that a form will be devised so that it will be simpler to code, index, and put the information on punch cards from the reported cases.

During the year the Secretary visited the collaborators at Boston, New York, Philadelphia, Chapel Hill, New Orleans, and Chicago, and met with the members of the staffs of the Departments of Obstetrics, Pediatrics and Medicine (diabetes) to work out the procedures for the handling of reports and tissues in each institution. Arrangements were made for the pathological examination of placental tissue and autopsy material in the Laboratories of the Department of Pathology, Harvard University Medical School, Boston.

During the current year the Secretary has devised a system for maintaining a quick reference to the status of all of the cases and for double checking of the cases and the investigators. Arrangements were made with a pharmaceutical firm to provide long-acting preparations to two of the collaborating investigators who are using the products on a "double blind" basis in the Study. The Study is divided into three parts, (*a*) one group at Boston in which all patients are being treated with steroids and hormones; (*b*) groups at New York and Philadelphia being treated with long-acting preparations on "double blind" basis; and (*c*) groups of "untreated" diabetics at Chicago and New Orleans which will serve as "controls."

Since the Subcommittee indicated a desire to hold future annual meetings in conjunction with the meetings of the American College of Obstetricians and Gynecologists, the Secretary has arranged for the next meeting to be held at Cincinnati on Saturday, April 2, 1960.

Subcommittee on Blood Dyscrasias.—After the staff had assembled the reports and prepared the semi-annual Tabulation of the cases reported to the Registry on Blood Dyscrasias through Dec. 31, 1958, the material was distributed to the state, county, and local Medical Societies; the libraries and departments of medicine, pathology, pediatrics, and pharmacology of all the medical schools in the United States and Canada; the physicians who had collaborated in the initial pilot study; and all of the hospitals in the United States. It was hoped through this means that more physicians would become aware of the existence of the Registry and would report cases.

The Secretary assisted in the preparation and editing of an article and an editorial which will discuss the development and work of the Registry (*J. A. M. A.* 170:1925 [Aug. 15] 1959; *J. A. M. A.* 170:1931 [Aug. 15] 1959).

The Secretary assisted the Subcommittee in the development and preparation of a statement dealing with blood dyscrasias associated with chloramphenicol therapy. This statement was processed through the Committee on Research Bulletin. After it was approved by the Committee it was transmitted to the Council on Drugs with the request that it be published in THE JOURNAL. The matter was considered by the Council on Drugs and it concluded that further discussion was desirable and placed the subject on the Agenda of its Annual Meeting scheduled for November, 1959.

During this past year the Secretary has been in contact with the officials of the American Society of Clinical Pathologists and the College of American Pathologists in an effort to enlist their help for the Registry on Blood Dyscrasias. It is hoped that by this means it may be possible to secure the help of a group of 20 to 30 pathologists who would be willing to assist in either reporting or getting attending physicians to report cases to the Registry. It was our desire to explore sections of the country other than the large metropolitan, teaching areas in order to obtain a more representative cross-section of the cases that we are missing since our present experience probably involves only a small segment of all of the cases which occur.

In December, 1958, the Secretary was invited to meet with Dr. Jonathan O. Cole, chief, Psychopharmacology Service Center, National Institute of Mental Health, Bethesda, Md., and the members of his staff to discuss the work of the Registry on Blood Dyscrasias. The Staff of the Psychopharmacology Service Center is concerned about the untoward reaction of drugs used in the care and treatment of patients with neuropsychiatric conditions. They were impressed with the simplicity and utility of our Registry. Subsequently, Dr. Cole advised the Secretary that the National Institute of Mental Health was unable to reach a decision concerning the advisability of setting up its own Registry. A second meeting developed the suggestion that the Psychopharmacology Service Center should make recommendations concerning individuals and institutions whose cooperation might be enlisted by the Registry on Blood Dyscrasias and any other Registry which may be developed under the aegis of the Committee on Research of the A. M. A. to study the adverse reactions to drugs.

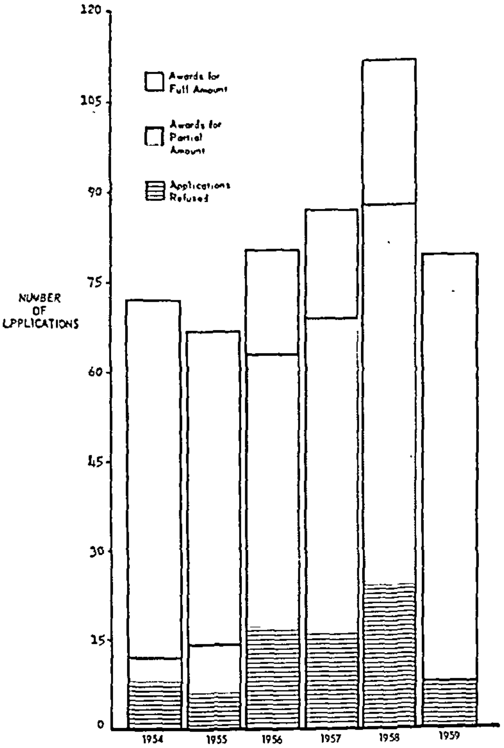

Fig. 1.—Number of applications received and number of grants awarded.

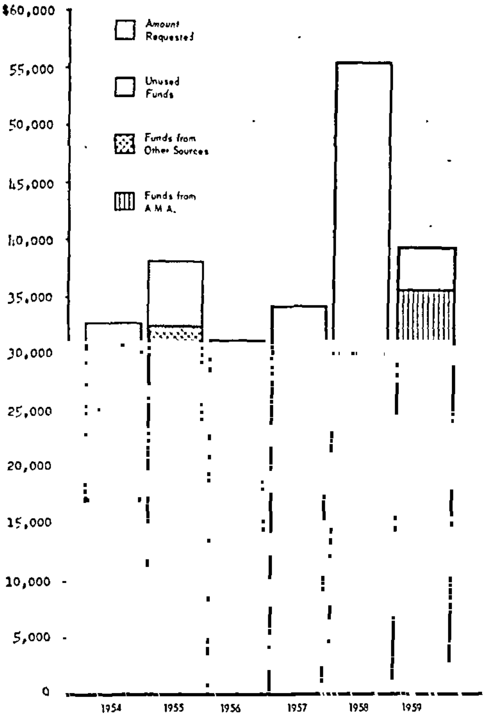

Fig. 2.—Amounts requested and funds available.

In attempting to bring the Registry to the attention of more physicians the Secretary appeared before the Midwest Regional Meeting of the American College of Physicians on Sept. 27, 1958, in Milwaukee, and discussed the organization and function of the Registry on Blood Dyscrasias of the A. M. A.

Subcommittee on Grants-in-Aid.—In view of the recommendation for a larger allocation for funds, the appeal to the Board of Trustees was made through the annual budget. The Board graciously allotted $35,000, or $5,000 more than last year's allotment, for this activity. The Subcommittee processed 83 applications—70 received full awards, 1 a partial award, 7 were rejected on the basis of the information, and 5 applicants whose requests came in late had to be advised that the funds were expended for 1959. Of the 71 grants awarded 68 were given to applicants from medical schools and 3 went to applicants from hospitals and other medical facilities. The Secretary reviewed all of the applications to determine the merit of the proposed project; whether the applicant had received previous grants; and the total number of awards made to each institution since the Subcommittee limits each institution to two awards per year. The Secretary conferred with the Chairman of the Subcommittee and the Director of the Department of Therapy and Research after his preliminary review and following this consultation the applications were forwarded to the members of the Subcommittee for consideration. Approval of applications resulted in the processing of the notification and preparation of a "contract" for the signatures by the investigator and a responsible official of the institution after which the awards were made.

COMMITTEE ON TOXICOLOGY

Committee Activities

This is the fifth annual report of the Committee on Toxicology. The following is a *résumé* of its more important activities and accomplishments during the past year.

Educational Activities.—The series of the Committee reports has been extended to eleven with the adoption for publication of reports on "Accidental Iron Poisoning in Children" and "Danger of Suffocation from Plastic Bags." The latter was a special progress report on a heretofor unrecognized environmental health hazard to which nationwide attention was first directed by the Committee on Toxicology.

The following special publications about legislation for the labeling of hazardous substances were also authorized: "Comparison of Chemical Specialties Manufacturers Association and American Medical Association Bills," "Summary of First American Medical Association Conference on Hazardous Substances Labeling Legislation," "Minutes of Second American Medical Association Labeling Legislation Conference," "Questions and Answers about Labeling Legislation," and the "Uniform Hazardous Substances Act"—a model for uniform laws to require precautionary labeling of hazardous substances in commercial, household, and industrial packaged chemicals.

A symposium on Accidental Poisoning was authorized for Committee sponsorship at the next Annual American Medical Association Meeting. The program which was recommended is to include "question and answer" type of presentations preceded by formal discussion by specialists in pediatrics, toxicology, environmental health, and accident prevention.

The Committee endorsed the resolution of Representative Jones of Missouri, now before the House of Representatives, which designates the second week in October as "National Poison Prevention Week." The Committee recommended five ways in which the American Medical Association could support this resolution and effectively participate in poison prevention activities.

Service Activities.—The Committee on Toxicology collaborated with other groups and organizations during the past year. The Committee continues its cooperation for a second year with the American Academy of Pediatrics and the American Public Health Association in a nationwide project to study the treatment of kerosene poisoning. Approximately 30 poison control centers and affiliated hospitals and clinics participated in this clinical study which is expected to take from three to five years. An initial result of the study has been the discovery of a means for determining blood levels of absorbed petroleum distillate. The value of anti-inflammatory agents such as steroid hormones has also been investigated A progress report on 473 cases studied to date was presented at the Ninth International Pediatric Congress, July, 1959, in Montreal.

The Committee continues its participation in the study by the Research and Reference Branch of the United States Food and Drug Administration of toxic reactions to drugs in select hospitals throughout the country. This study is intended to determine the frequency, extent, and duration of injury from drugs among hospital patients. During the past year, 161 cases from 10 cooperating hospitals were reviewed.

A special subcommittee has been appointed to study the technical problems involved in maintaining the identity and character of the toxicology program of the Committee within the framework of a broader study of environmental health hazards. The sub-committee has suggested that, because of the major importance of toxicity hazards and the contributions the Committees have made to their understanding, the present programs of the Committees on Pesticides and Toxicology be retained as a nucleus for an expanded program of study of environmental hazards affecting public health.

The Committee reviewed 16 potential projects for development of safety standards for the American Standards Association. Four projects were recommended in which information and other Committee facilities could be of help in developing standards.

Legislative Activities.—The Committee sponsored an industry-wide label law conference on July 25, 1958. This was the second national meeting to discuss proposed legislation requiring the declaration of hazardous ingredients and warning statements on the label and in the accompanying literature of household, commercial, and industrial packaged chemicals. It was attended by representatives of over 60 industry trade associations, toxicity testing laboratories, chemical trade unions, and similarly interested groups. Following a recommendation of this conference, the Committee met in a high level conference with industry representatives in Cleveland, November, 1958. The exchange of views led to proposals for modifications which did not appear in the original drafts of either bill but which seemed to meet the objectives of both groups. The five affected trade associations have adopted a modified bill reflecting many of the tentative agreements reached during the meetings last fall.

In January, 1959, a joint meeting was held between representatives of the Council on Industrial Health and members of the Committee on Toxicology to discuss the proposed hazardous chemical labeling legislation. It was agreed that tremendous progress had been made in resolving issues which were felt to be of considerable importance and on which there had been major disagreement. The representatives of the Council on Industrial Health indicated their sympathetic understanding of the treatment of the problems that had arisen in connection with the drafting of the law and on the basis of latest developments indicated their approval in general of the intention and principles in the development of a model law.

The American Medical Association sponsored "Uniform Hazardous Substances Act" was introduced into Congress by Representative Thomas Curtis on May 25, 1959, as H. R. 7352. The Committee subsequently submitted a seven-point program to support passage of this legislation.

The Committee also provided technical assistance to the New York City Health Department in revision of the section of the New York City Sanitary Code concerned with hazardous substances. The revised Sanitary Code was approved by the New York City Board of Health in December, 1958.

Staff Activities

The staff of the Committee on Toxicology was engaged in the following activities during the past year:

Educational Activities: Publications.—The following reports were prepared for publication in the Committee column in The Journal: "*Accidental Iron Poisoning in Children*" and "Danger of Suffocation from Plastic Bags." Other staff reports appeared in *The Food, Drug and Cosmetic Law Journal* ("Closing the Gap in Label Legislation"), *Monthly Bulletin of DiCyan and Brown* ("The Philosophy of Label Legislation"), and in *The Sanitarian* ("Labels, Legislation and Our Expanding Chemical Environment").

The following special publications were prepared as background information on legislation for the labeling of hazardous substances: "Digest of Uniform Hazardous Substances Act," "Comparison of Chemical Specialties Manufacturers Association and American Medical Association Bills," "Summary of First American Medical Association Legislative Conference," "Minutes of Second American Medical Association Legislative Conference," "Condensed Table of Existing Label Laws for Chemicals" and "Questions and Answers."

Confidential Bulletins comprising nearly 400 pages of transactions of Committee business were prepared by the office staff for circulation among the members of the Committee on Toxicology.

Reprints.—Several thousand reprints of the two latest Committee reports have been distributed to medical societies, public health and regulatory groups, various organizations, and individuals in this country and abroad. Over

5,000 reprints of the report "Recommendations of the Committee on Toxicology on First-Aid Measures for Poisoning" have been distributed and authorization to reproduce the report as a public service pamphlet has been given to Walter Reed General Hospital, Agricultural Extension Service, United States Department of Agriculture, Canadian Department of Agriculture, American Telephone and Telegraph Company (3,000 copies), and the National Pest Control Association (20,000 copies).

Two volumes of Committee on Toxicology publications were prepared in loose-leaf form in response to requests for permanent bound copies for reference use.

Information Services.—The Secretary met with representatives of the National Safety Council and the National Association of Poison Control Centers to consider an educational campaign for the public on the prevention of accidental poisoning. Tentative plans were discussed for studying existing educational programs of various public and private agencies and coordinating these efforts in a unified educational program.

A description of the Committee's program for study of accidental poisoning, published reports illustrating work done by the Committee and its relationship with poison control centers was provided to Cornell University as background for lectures on the poison prevention movement. The Secretary addressed the Medical College of Virginia on current toxicologic problems. This is the second year that an invitation has been extended.

During the past year, the Committee was asked by public and private agencies to consider and render opinion on a variety of problems involving the hazardous potentialities of chemicals. Several hundred inquiries on the health aspects and usefulness of commercial, household, and industrial products were also answered by the Committee office. Assistance was provided various departments at Headquarters in the preparation of book reviews, "Questions and Answers," reviewing manuscripts, and advertising on matters involving toxicology.

Investigative Activities.—The danger of suffocation to small children who play with plastic garment bags was brought to the attention of various national and local health agencies by the Committee office in February. At that time, the Committee was advised by a local medical society that four deaths in one week were reported in a western city. As a result of this early warning, various municipal health departments prepared technical notices and news releases about infants dying from suffocation by plastic material. A feature story in the April 25th issue of THE JOURNAL (Medicine at Work) on the problem and the Committee's effort to sound a warning prompted nationwide publicity in *Time* Magazine and over various wire services.

In the meantime, the committee office continued its investigation and contacted The National Safety Council, The Society of the Plastics Industry, and manufacturers of polyethylene plastics to determine the static characteristics of various grades of polyethylene and other technical aspects in the production and manufacture of plastic garment bags. Significant facts were obtained for evaluating the practical hazard of thin plastic sheets to crawling infants and small children who may encounter them as discarded garment bags, food wrappings, and table and furniture coverings. To date over 70 deaths have been uncovered.

The hazards of suffocation from misuse of plastic garment bags occupied a substantial amount of time of the Committee staff. Meetings were successively held with representatives of The Society of the Plastics Industry, Inc., *Life* Magazine, and the Chicago Health Department. Interviews were held with news reporters; facts were collected for feature stories in THE JOURNAL and the *AMA News*, and a 25-page Special Bulletin on status of problem was prepared for members of the Committee on Toxicology.

As a result of the Committee's alert, the U. S. Public Health Service initiated a nationwide epidemiologic survey of reported injuries. The Pastics Industry has prepared an educational booklet on hazards and radio and TV stations donated time for spot announcements on the plastic bag hazard at time of newscasts. Bills to require warning labels were introduced into Congress and various state and local legislatures including Illinois legislature and the Chicago City Council. A progress report to the medical profession has been prepared for JOURNAL publication summarizing the record of injury and the remedial measures which have been undertaken.

The annual compilation of accidental poisoning statistics was prepared from weekly reports received from the American Red Cross and the monthly reports of the New York Poison Center. These compilations provide information about relative incidence of injury from various types of substances involved in poisoning. A compilation of accidental poisoning cases taken from newspaper clippings, covering the period from 1955 through 1958, was completed in February. The data revealed the pattern of nonfatal injury to be as follows: poisoning from internal medications is most frequent followed by cases due to insecticides and rodenticides, household agents, industrial and other solvents, and miscellaneous products such as cosmetics. Seven hundred and seven deaths from substances in all categories were reported during this period.

Service Activities.—Through the Secretary, representation is maintained on the Committee of the Chicago Poison Control Center, the Steering Committee of the National Clearinghouse for Poison Control Centers, the American Standards Association—Z66 Committee on Hazards to Children, and the United States Food and Drug Administration's Committee on Adverse Reactions to Drugs. During the past year, the Secretary addressed the Association of Food and Drug Officials of the United States, the Annual Educational Conference of The National Association of Sanitarians and the Ohio State Medical Association's Poison Control Conference. He was elected to membership in the Royal Society of Health, Great Britain, and was appointed Councilor for the Occupational Health Section of the American Public Health Association. He also contributed to a textbook on toxicology recently published by the Oxford University Press.

Liaison is maintained with the American Academy of Pediatrics, American Association of Poison Control Centers, American Public Health Association, American Standards Association, National Research Council, and the United States Food and Drug Administration. The Committee on Toxicology is a joint sponsor or participating member of inter-organizational undertakings with one or more of the foregoing groups.

The Committee office arranged for two public conferences on the labeling of hazardous substances, a luncheon meeting of the Occupational Health Section of the American Public Health Association, a joint meeting with the Council on Industrial Health, and for the Annual Meeting of the Committee on Toxicology.

The Committee office reviewed and commented on hazardous substances bills introduced in several state legislatures and in both houses of Congress. Assistance was provided in the revision of the clinical toxicology section of the "Standard Nomenclature of Diseases and Operations."

Respectfully submitted,

LEONARD W. LARSON, M.D., *Chairman*
JULIAN P. PRICE, M.D., *Vice Chairman*
HUGH H. HUSSEY JR., M.D., *Secretary*
JAMES Z. APPEL, M.D.
GEORGE M. FISTER, M.D.
PERCY E. HOPKINS, M.D.
RAYMOND M. MCKEOWN, M.D.
CLEON A. NAFE, M.D.
RUFUS B. ROBINS, M.D.
LOUIS M. ORR, M.D.
E. VINCENT ASKEY, M.D.
J. STANLEY KENNEY, M.D.
NORMAN A. WELCH, M.D.
MILFORD O. ROUSE, M.D.

STAFF ACTIVITIES

Report of the Executive Vice President to the Board of Trustees

This first annual report of the Executive Vice President to the Board of Trustees covers the period of July 1, 1958 to June 30, 1959.

During this period, the major event was the reorganization of the staff. As previously reported, the staff was reconstituted into seven broad divisions. The Directors of these divisions have reported their respective activities during the reporting period; but I should like to add a few special comments. It is my conviction that the reorganization has streamlined our organizational structure, eliminated much overlapping and duplication of effort, established clear lines of command, and resulted in increased efficiency and productivity.

I am certain that the over-all legislative program of the American Medical Association is far more effective than it was previously. The reorganization of the Washington Office into Divisional programs with the personnel of that office answering to their respective divisional directors in Chicago has resulted in clearer lines of communication and an identity of interest of the Washington office staff with the AMA staff in Chicago.

The Division of Scientific Activities, under the direction of Dr. Edward L. Turner, is now reappraising its entire program. I predict that the many diverse programs now included within that division will undergo considerable change and expansion, or retraction, as the case may be, during the next reporting period. In any event, the coming changes will be designed to promote ever increasing scientific prestige of this Association.

During the next year, I shall make additional recommendations to the Board of Trustees to carry forward the basic reorganization which has now been completed. I am hopeful that, when these administrative changes are made, the morale and efficiency of the members of the staff will be further strengthened and their relations with councils and committees to which they are assigned as secretaries will be better defined. Some confusion still exists in the minds of some members of the staff regarding the source of their authority and the person to whom they report. This situation is particularly true of council secretaries. We are hopeful that the responsibility of a council secretary will be so defined during the coming year that he will understand that he answers to respective staff through department and divisional levels to the Executive Vice President but is assigned to provide specific service to a committee or council. When the administrative structure is more clearly appreciated by the staff, I am convinced that committees and councils of the Association will receive even better staff service.

The remodeling of the AMA headquarters building was begun in summer of 1958 and in June was proceeding according to plan. The AMA will be housed in a modernized air-conditioned office building by the end of this year.

During this period, innumerable conferences and meetings have been attended; an enormous amount of mail has been processed; the new administrative regulations and policies have been established; and the Board of Trustees, its committees, and the House of Delegates have been provided staff service. It has been a busy, challenging, fruitful, and exciting year.

Report of the Assistant Executive Vice President to the Executive Vice President

During the reporting year, the Assistant Executive Vice President assisted the Executive Vice President in the administration of the headquarters office, and the staff servicing of the Board of Trustees and the House of Delegates. He acted for the Executive Vice President in his absence and represented him at selected meetings.

In addition to his other duties, he was Director of the Staff Task Force on the Forand campaign, whose objective was to coordinate and plan the campaign at a staff level. This important responsibility will continue into the next reporting year, since the Forand bill remains a serious threat in the 1959-1960 Congress.

Report of the Assistant to the Executive Vice President

As assistant to the Executive Vice President, Mr. Thomas A. Hendricks is responsible for special assignments in connection with the operation of the Executive Vice President's office, assisting the Executive Vice President in handling official correspondence, visitors and meetings.

During the year he carried out many special assignments in connection with the operation of the Executive Vice President's office. Among these tasks:

He served as AMA staff respresentative at the annual U. S. Chamber of Commerce meeting in Washington;

He was liaison representative between local arrangements committee and the AMA for the Second World Conference on Medical Education, held in Chicago;

He acted as staff observer at the annual AAPS meeting in Fort Worth, Texas;

He attended as observer the annual session of the National Health Council, and served as chairman for the meeting between the staffs of that council and the AMA following that meeting;

He moderated the panel on "Princeton's Contribution to American Medicine" at Princeton, New Jersey;

During the year he spoke at many state and local medical society and auxiliary meetings, and aided in the indoctrination of the field service staff;

From time to time he fulfilled assignments for the AMA News and The Journal;

He was co-author of article "The Emblem of the American Medical Association";

He sat in as representative for the office of Executive Vice President on many committee and council meetings;

He is responsible for the assembling and production of the monthly periodic reports, which serve to keep the staff up-to-date on programs, developments and progress of the various AMA divisions;

He is serving as President of the Medical Society Executives Association; and

He is a director on the National Board of the Public Relations Society of America.

REPORT OF THE RESEARCH ABSTRACTER OFFICE OF E. V. P.

Proceedings of the House of Delegates.—Six issues of the Official Proceedings of the House of Delegates (June 1956 to December 1958) were completed, bringing this basic policy document up to date. The format was completely revised and, instead of a chronological listing of events verbatim, material was organized and selected so that reference need not be made to three or four different locations in tracing through an action.

The index, formerly 16 pages long, was replaced by one which is two and a half pages and more comprehensive in coverage. Rather than designating an item by the multiple key words in its title, the new index attempts to reach items of policy within a report or resolution. The conciseness of this index lends itself to cumulation.

The new Proceedings attempt to be a complete historical record of a given meeting, including a directory of officers, committees and delegates, as well as policy matters.

Digest of Official Actions.—The encyclopedia of A. M. A. policy, covering the years 1846 to 1958, was completed during the period of this report. Printing of the Digest has commenced and the volume should be ready for distribution by September 1959.

To insure continuity, supplements to the Digest will be prepared in five year intervals and periodically cumulated.

Reference Service.—An integrated medical socio-economic reference service was developed for the use of headquarters staff and outside persons, incorporating House and Board actions, council decisions, and *The Journal* editorials. Reports were furnished for many special committees, including the Joint Committee to Study Paramedical Areas in Relation to Medicine, the Committee on Scientific Activities, and the Committee on Atomic Medicine and Ionizing Radiation. Background for testimony was regularly provided for the Law Division; facts were established for the Communications Division; a 90-page brochure on House policies was compiled for the Field Division. For the Office of the Executive Vice President, resolutions were analyzed and background material furnished for reference committees prior to each House session.

Consultant Activities.—The research abstracter served as consultant in the area of library and indexing services for headquarters.

1. Quarterly Cumulative Index Medicus: Professional advice was given over a one-year period with regard to the discontinuation of this publication and the proposal of the National Medical Library.

2. Survey of the A. M. A. Library: Assistance was provided to Dr. Thomas Fleming of Columbia University in a survey of the Library of the American Medical Association and its program in the field of international medical indexing.

3. Medical Socio-Economic Library: Several departments within the Division of Socio-Economic Activities expressed a desire for establishment of a division library, pooling book, periodical and file holdings. Subsequently, each department was surveyed with reference to scope, classification and administration of materials. Suggested floor plans were completed for Dr. Yoder.

4. Microfilm: At the request of the Business Manager, an extensive study was made of the use of microfilm in records management, covering legal and technical aspects as well as data retrieval methods.

5. Developments in Library Field: The research abstracter attended (1) an international conference on scientific information, sponsored by the National Academy of Sciences, and reported developments in data storage and retrieval; (2) meeting of the National Medical Library Association at which significant trends in the medical library field were reported in relation to the program of the American Medical Association.

6. Canadian Medical Association: Assistance was given to the Canadian Medical Association in setting up methods for handling socio-economic materials. The subject authority file, compiled by the research abstracter, was requested by the C. M. A. in setting up its filing and indexing program.

Medical Socio-Economic Indexing.—At the direction of the Assistant Executive Vice President, a comprehensive indexing program to coordinate all basic policy documents of the American Medical Association was begun. These documents include proceedings of the House of Delegates, minutes of the Board of Trustees and minutes of the several committees and councils.

Steps were taken to define the problem. A survey of departments at headquarters was made with regard to (a) the need for an index or guide to proceedings; (b) scope of material to be indexed; (c) nature of information desired—level of complexity.

First edition of a subject authority file, central to an indexing program, was completed for the field of medical socio-economics. This twenty-one page list is the first to be produced in this area; the nomenclature is based upon a long term view of the activities of organized medicine (from 1846) and the mechanics upon a complex of cross headings.

In addition to subject, entries are made under organizations and names; thus, for a given individual or organization, there will be a complete guide to relationships with the American Medical Association.

The objective of this program is the development of a central reference and indexing service for the Association in the field of medical socio-economics.

REPORT OF THE BUSINESS DIVISION

In August 1958, the reorganization of the headquarters staff resulted in the formation of the Business Division which included eight operating departments—Accounting, Advertising Sales, Building Maintenance, Circulation & Records, Contract Printing, Convention Services, Operating Services, and Personnel. From July 1, 1958, to June 30, 1959, the Business Division accomplished the following:

A. M. A. Building Program.—The renovation of the A. M. A.'s headquarters building in Chicago has proceeded according to schedule and will be completed in December 1959. Air-conditioning equipment with seven-thousand tons of capacity has been installed and modern office facilities are being created.

Convention Services.—The Convention Services Department has continued to expand its area of services in connection with the Annual and Clinical Meetings. The facilities of several cities have been surveyed, and on the basis of these studies, recommendations for meeting sites for future years have been made to the Executive Vice President.

Advertising Department.—Following the reorganization in August 1958, the Advertising Sales Department was charged with responsibility for the sale of advertising in all A. M. A. publications. Advertising rates were increased for THE JOURNAL of the American Medical Association on January 1, 1959, and present plans call for increases in the advertising rates for other A. M. A. publications in the near future. These increases will reflect the expanded circulation of these publications and will offset the increases in the cost of their production.

Accounting Department.—The Accounting Department undertook a study of the past accounting and budgetary practices of the Association and recommended to the Executive Vice President that the accounting and budget system be completely revamped. These recommendations were endorsed by the Association's auditors, Peat, Marwick, Mitchell & Co., were recommended to the Board of Trustees by the Executive Vice President and were made effective January 1, 1959.

Personnel Department.—The Personnel Department, in addition to providing service to all of the other departments and divisions, participated in several basic studies in the personnel area. The Wage and Salary Administration Program, within which the compensation of all staff personnel is administered, was reviewed and several improvements made. The existing Employee Pension Program was restudied and recommendations for its improvement will be forthcoming. Studies were begun for the publication of a manual describing the organization and the operating policies in effect at headquarters.

The Personnel Department also participated in the planning of the remodeled cafeteria and in launching a monthly employee magazine.

Contract Printing.—The Association continues to purchase all of its printing from outside sources, and at present, is using three different printing firms for the production of its regular publications. During the year, over 21 million copies of these publications were produced and distributed to A. M. A. members and to other subscribers.

Operating Services.—The activities of this Department were reorganized and major improvements were effected in the handling of mail and telephone calls and in providing purchasing and reproduction services to all other departments.

During the year, almost 4,000 separate reproduction jobs were handled by this Department.

Circulation & Records Department.—Membership in the A. M. A. *increased by 7,019 during the fiscal year July 1,* 1958, through June 30, 1959. A breakdown of the membership records as of June 30, 1959, follows:

Reported Through Constituent Societies

	AS OF *6/30/59*	AS OF *6/30/58*
Active Members dues paid	140,167	136,062
Active Members exempt from dues	10,811	10,344
Associate Members exempt from dues	6,439	6,293

Reported Direct

Service Members exempt from dues	18,654	16,352
Affiliate Members exempt from dues	278	278
Honorary Members exempt from dues	88	89
Total Membership on June 30	176,437	169,418

The next table shows the number of physician members of constituent medical associations who also hold membership in the American Medical Association. For reference, the total number of physicians licensed to practice medicine and currently residing in the state is also indicated. The apportionment of the delegates to the A. M. A. House of Delegates is based on the membership as recorded on December 31 of each calendar year, and this should not be confused with the following June 30 report:

A. M. A. Membership Report June 30, 1959

Constituent Society	Active Dues Paying Members	Active Dues Exempt Members	Total Active Members	Associate Dues Exempt Members	Total of All Members	Total Licensed Physicians Residing in State
Alabama	1,589	290	1,879		1,879	2,444

TODAY'S HEALTH (monthly)	556,194
AMERICAN MEDICAL DIRECTORY, 20th Edition (biennially)	16,845

REPORT OF THE COMMUNICATIONS DIVISION

The period covered by this report is July 1, 1958, to June 30, 1959.

In the early weeks of this period the former Department of Public Relations was reorganized into four departments—Media Relations, Program Development, Services to Officers and Special Services—in the newly created Communications Division. In addition, the Department of Medical Motion Pictures and Television, the Bureau of Exhibits, Today's Health Editorial and A. M. A. News Editorial became units of the Communications Division.

The new Division as a whole is aimed at a coordinated effort to give both the public and the medical profession a positive concept of the American Medical Association itself and of the scientific and socio-economic advances in medicine.

Advisory Committee.—To help achieve that objective, the Advisory Committee to the Director of the Communications Division met four times and gave valuable advice on ways and means of solving medicine's public relations problems. Members of the Advisory Committee were:

Mr. George Saville, Chairman
  Assistant Executive Secretary, Ohio State Medical Association
Mr. Ed. Clancy
  Director of Public Relations, California Medical Association
Mr. John C. Foster
  Executive Secretary, South Dakota State Medical Association
Mr. Joseph L. Gordon
  Executive Secretary, Hartford County (Conn.) Medical Association
Mr. Robert I. Howard
  Executive Secretary, Medical Society of Virginia
Mr. Milton D. Krueger
  Executive Secretary, Medical Association of Georgia
Mr. W. Harold Parham
  Executive Director, Florida Medical Association
Mr. Donald L. Taylor
  Executive Secretary, Iowa State Medical Society
Mr. C. Lincoln Williston
  Executive Secretary, Texas Medical Association

COMMUNICATIONS RESEARCH

This new section researches medical and non-scientific materials for Communications Division writers and reporters for mass media. Aided by an enlarged, centralized reference library, the section handled an average of 13 research requests per week.

Department of Media Relations

PRESS RELATIONS

Service to Newsmen.—The press section provided a continuing service to newspaper, wire service and news magazine reporters—handling an average of 15 requests for information a week.

Annual Meeting.—The Atlantic City meeting attracted one of the widest press coverages ever given a medical meeting. Press room total registration was second only to that at the 1957 annual meeting in New York. Western Union employed 40 persons to man a battery of 20 teletype machines which handled an unprecedented quarter-million words of wire copy. The registration included 56 newspapermen, 20 members of the Washington press corps, 23 radio and television reporters, 26 magazine and free lance writers, 73 members of the medical trade press and 44 advertising and public relations representatives, for a total of 242.

President Eisenhower's address at the inaugural ceremony gained a vast amount of news and editorial coverage throughout the country. Extensive coverage also was given to Dr. Gunnar Gundersen's House of Delegates address, House actions on osteopathy and the report of the Commission on Medical Care Plans, and several of the scientific papers.

Clinical Meeting.—The Minneapolis meeting drew a total press room registration of 54 persons. Excellent news coverage was obtained in the Twin-City area, and good nationwide publicity resulted from the efforts of Associated Press and the New York Times. Stories which attracted particular attention were the General Practitioner of the Year award, Minnesota Governor Orville Freeman's address to the House of Delegates, the House action regarding adjusted fees for the aged with low incomes or limited family resources, and discussion of the report of the Commission on Medical Care Plans.

Special Meetings.—Through advance news packets, press room services and follow-up informational activities, the Press Section provided news coverage for the following conferences or meetings sponsored by the Association: two symposia on Foods and Nutrition, three conferences (two national and one regional) on medical aspects of National Defense, Mental Health Conference, Congress on Medical Education and Licensure, Congress on Industrial Health, Conference on Rural Health, three conferences on Medicolegal Problems, a national planning conference and a regional conference on Aging, and two press conferences on the Medical Aspects of Sports Injuries. In addition, the press staff assisted with publicity for meetings sponsored by the Joint Council to Improve the Health Care of the Aged, the National Health Council and the Homemaker Service Conference.

Special Releases.—In addition to the weekly news release, which now goes to almost 3,000 outlets, special stories were issued on A. M. A. appointments and resignations, A. M. A. program on aging, formation of new committee to coordinate audio-visual aids in the staphylococcus education program, publication date for A. M. A. News, year-end roundup on future of medical research, model law to cut poison deaths, progress in health programs for the aged, and speeches by Association officers on quackery and aging.

MAGAZINE RELATIONS

New Staff Member.—At the Minneapolis session the House of Delegates recommended increased liaison with magazine writers and editors. In order to accomplish this end, the Department secured the services of an editor formerly employed by Time, Inc. and Pageant.

Continuing Services.—Approximately 180 requests for assistance in the preparation of medical or health articles were received and serviced. The material provided has been used for articles in 30 mass circulation magazines, including Saturday Evening Post, Life, Reader's Digest, Good Housekeeping, Coronet and Family Weekly. In the same period a total of 63 articles came in for review.

Expanding Program.—To increase liaison with magazines and free lance writers, a letter was sent in February to editors of the 25 major consumer publications and to more than 150 members of the Society of Magazine Writers, telling them about expansion of the magazine relations section and its services. Follow-up trips to New York were made to contact editors and writers personally for discussions of story ideas and common problems. The new program is placing greater emphasis on the origination and placement of story ideas with magazines and writers. Special articles also were prepared for This Week and Parade on compulsory retirement and the cost of medical care, respectively.

RADIO-TELEVISION-MOTION PICTURES

Increased Liaison.—As part of the general expansion of the Division, a full-time staff man was employed to serve as liaison between the Association and the television, radio and motion picture industries. Early in the period, assistance provided to broadcasting representatives was limited; towards the end of the period, requests were handled at an average of 20 a week.

Liaison was established with producers of "Monitor" and discussions were held for presentation of medical features on this program. In cooperation with the Committee on Hypnosis, advice was given for the Armstrong Circle Theatre production of "Prescription Hypnosis." A one-minute film on amphetamines was released simultaneously with the press conference on the report of the Committee on Amphetamines and Athletics. Background film footage on the GP of the Year was released to TV stations to tie in with his selection at the Clinical Session.

Advisory Committee.—The Physicians Advisory Committee on Television, Radio and Motion Pictures, which entered its fourth year of operation, was very active in helping to assure accurate dissemination of medical facts in the audio and visual media.

Maintaining liaison with producers in both Hollywood and New York, the Committee and its staff supplied help to writers and continuity clearance men an average of 10 times a week. This assistance ranged from checking medical facts for accuracy via telephone to reviewing complete television scripts. The Committee assisted all three networks—ABC, NBC and CBS—in both radio and television activities, working with such important programs as "Playhouse 90," "Studio One," "Armstrong Circle Theatre," "The Donna Reed Show," "The Art Linkletter Show," 'The Loretta Young Show" and "DesiLu Playhouse." The Committee was also called upon to review several movie scripts such as 20th Century Fox's "Beloved Infidel."

Current members of the Committee are:

(California)
Eugene Hoffman, M.D., *Chairman*
E. Vincent Askey, M.D.
Dudley M. Cobb, M.D.
Robert W. Gentry, M.D.
Richard O. Myers, M.D.
Marcus H. Rabwin, M.D.
James F. Regan, M.D.
Charles C. Stehly, M.D.
Edward T. Tyler, M.D.
(New York)
Gerald D. Dorman, M.D., *Co-Chairman*
Renato J. Azzari, M.D.
Henry I. Fineberg, M.D.

Radio Transcription.—During the period of this report, the Division took over radio production previously handled by the Bureau of Health Education. A series of 13 fifteen-minute programs titled "Health Magazine of the Air" which was originated by the Bureau was produced and distributed to radio stations.

A special committee of medical society public relations executives analyzed the Association's radio transcription activities and recommended a curtailment in production of fifteen-minute programs. The group recommended production of five-minute features. Work was started immediately on a series of vignettes from medical history to be called "Medical Milestones."

TV Films.—Five A. M. A. public relations films—"Even For One," "Helping Hands for Julie," "A Life to Save," "Whitehall 4-1500" and "Medicine Man"—were shown 636 times on television stations with a total viewing audience of 21,000,000.

Group Showings.—The aforementioned five films, plus "Your Doctor," also were distributed to school, church and club groups for a total of 12,285 showings to 950,000 people.

Annual and Clinical Meetings.—The Atlantic City and Minneapolis meetings received good radio and television coverage, both local and network, through regular news programs and special interviews, live and taped, and through the Bulletin of the Air series presented in cooperation with Merck, Sharp and Dohme. In addition, the annual meeting coverage included a one-minute news film clip of Dr. Orr's inaugural address, which was used by more than 225 TV stations reaching an estimated audience of well over 18,000,000 persons; a CBS Radio Network broadcast of President Eisenhower's address, and two 3-minute spots prepared for NBC Monitor.

EXHIBITS

Distribution.—The Exhibit Section distributed 425 exhibits for a total of 1,575 showing days before 96 lay groups, 35 county fairs, 23 state fairs, 23 allied health groups, 10 health fairs and six state medical society annual meetings. The section assisted the Columbus (Ohio) Health Fair with 35 exhibits and two staff members.

New Exhibits.—Twenty-two new exhibits were constructed including those on the following subjects: drinking drivers, nutrition, medical careers, A. M. A. services, mechanical quackery, standard nomenclature, aging, and immunization.

New Systems.—To improve efficiency, increase bookings and lower construction costs, the section established three new sources of supply, a working agreement with a top exhibit designer, a more practical system of construction bidding, streamlined reservation and record-keeping systems, new shipping procedures to insure on-time arrivals, a quantity exhibit structure purchasing plan to save 40 per cent in construction costs, and a new flexible exhibit catalog.

Department of Program Development

HEALTH CARE OF THE AGED

In close collaboration with the Council on Medical Service, the Committee on Aging, the A. M. A. Task Force on Aging, the Field Service Division and other units of the Communications Division, the department engaged in the following *activities:*

1. A detailed report on recent A. M. A. efforts to improve health care for the aged was prepared for the House Ways and Means Committee and also was distributed to other key persons in Congress and elsewhere.
2. Developed an over-all program for future A. M. A. activity in the field of aging, which was unanimously adopted by the task force.
3. Prepared copy for a new exhibit on aging.
4. Produced and distributed 150,000 copies of a new question and answer pamphlet on compulsory health insurance (Forand Bill).
5. Prepared special speech materials on aging for A. M. A. officials and for the Washington conference of the Joint Council to Improve the Health Care of the Aged.
6. Wrote testimony for A. M. A. witnesses before the House Ways and Means Committee and the U. S. Senate Subcommittee on Problems of the Aged and Aging.

7. Worked with state and county medical society officials on plans and publicity for a saturation speaking program to begin in late summer and to be supplemented by a special speakers' kit.

8. Assisted in preparation of an informational letter to the House Ways and Means Committee and other interested groups.

National Science Fair.—The Association participated for the fourth time in the National Science Fair, held at Hartford, Conn. in May, and presented four citations to the students with the best exhibits in the basic medical sciences. The winners received substantial nationwide publicity. They were honored at a special A. M. A. banquet for all of the 1,000 students participating in the fair. The two top award winners displayed their exhibits at the A. M. A. June meeting in Atlantic City.

Medical Careers.—The department produced "I Am a Doctor," a film for high school and college students, wrote copy for an exhibit on "Medicine As a Career" and completed the first draft of a comprehensive medical careers handbook for vocational guidance counsellors and teachers.

Medical Education.—An attractively illustrated booklet on the progress of American medical schools was prepared for distribution to participants in the Second World Conference on Medical Education.

Weight Reduction.—In cooperation with the Council on Foods and Nutrition, a new pamphlet entitled "The Healthy Way to Weigh Less" was distributed to more than 600,000 persons. It was widely used by syndicated health columnists, newspaper food editors and television and radio commentators.

Food Faddism.—Six thousand kits of materials on sound nutrition—speeches, pamphlets, films, flyers, reprints—were distributed to state and county medical societies and allied groups. More than 204,000 copies of the pamphlet, "The Merchants of Menace," were sent out.

Annual Meeting.—A promotional program including both publicity and advertising was carried out to stimulate attendance at the Atlantic City meeting. The department also handled production of the general program.

Seat Belts.—The department continued liaison activity with the National Safety Council and the U. S. Public Health Service to develop a public education campaign to stimulate the use of seat belts in automobiles.

Department of Services to Officers

Speeches.—The four staff members assisted in the preparation of 88 speeches. The bulk of these dealt with AMA policies or programs on aging, freedom of choice, medical research, medical education, third parties and medical care plans, quackery, atomedics and voluntary health insurance. Many of them were reprinted in state and county medical journals, specialty journals or non-medical publications.

Articles.—Editorial assistance was given in the preparation of four major articles: "Opportunities Ahead" for GP, "Medical Practice in 1970" for New Physician, "Report From the AMA" for Public Health Reports, and "Teamwork Is the Answer" for American Professional Pharmacist.

Statements.—Eleven special statements were written for such organizations or publications as Drug Topics, USO, American Dental Association, American Institute of Electrical Engineers and the Red Cross, and on the subjects of inflation, health care of the aged, compulsory health insurance and freedom of choice.

Inaugural Ceremony.—The Department handled general arrangements, script writing and promotion for the presidential inauguration ceremony at the annual meeting.

Daily Bulletin.—The department manager, assisted by other division staff members, served as editor of the Daily Bulletin at the Minneapolis meeting (three issues) and the Atlantic City meeting (five issues).

House of Delegates Report.—Total distribution for the roundup story on House of Delegates policy actions, which is mailed out on the final day of each annual and clinical meeting, increased from 900 at Minneapolis to 1,350 for Atlantic City. These reports also were reprinted in AMA News.

Additional Services.—The department also: assisted in the preparation of the monthly *President's Page* in JAMA; provided *press assistance* for the President on 11 speaking trips; helped arrange and coordinate *itineraries* of officers and handled a large volume of *correspondence* for the President and President-Elect.

Department of Special Services

SERVICES TO STATE AND COUNTY SOCIETIES

PR Doctor.—Six regular bimonthly issues, plus a special issue on county officers conferences and public relations conferences, were distributed to state and county medical societies. The special issue was added to the file of "PR in Action" kits. A 1958 index of the newsletter was distributed with the January issue. An index of PR Aids and Materials was assembled for distribution at the 1959 PR Institute.

PR Institute.—The 1958 annual workshop session attracted nearly 400 medical society officers, public relations chairmen and lay executives for practical discussions of social and economic changes in American life, communications techniques, outstanding PR projects and the need for "vision, valor and vitality" in medical public relations programs.

LITERATURE PRODUCTION AND COUNSELLING

New Publications.—Major new pieces were *"The Pill That Could Change America,"* an up-to-date review of socialized medicine in the world today and *"Science and Service to Humanity,"* a four-page brochure on AMA services, which was distributed to Association members and to medical societies.

Distribution.—Total distribution of printed materials, including reprints, was more than 4,500,000, the major items being: Family Health Record—1,500,000; Personal Health Information Card—1,250,000; "To All My Patients"—600,000; "The Fifth Freedom"—400,000; "Do You Like To Make Decisions?"—400,000, and "What Everyone Should Know About Doctors"—100,000.

Counselling.—A new creative counselling service, available on request to AMA departments, councils and committees, provided editorial, production and promotional assistance on 22 projects.

Evaluations.—To help eliminate duplication and improve quality, evaluation studies were being made of (1) all printed materials prepared in connection with AMA annual and clinical meetings and (2) the nearly 1,000 pamphlets, brochures and reprints turned out by all Association departments.

LIAISON WITH WOMEN'S GROUPS

Medical Assistants.—The department provided program-planning guidance and speakers for medical assistants groups; held a special half-day program at AMA headquarters for 500 women during the Chicago convention of the American Association of Medical Assistants; co-sponsored a reception for 600 convention participants; assisted in the planning of an educational seminar for the AAMA 1959 meeting; initiated a monthly news release for medical assistants bulletins; gave continuing assistance in the development of career guidance programs, and helped in the establishment of the AAMA national office in Chicago.

Woman's Auxiliary.—For the first time, the AMA Woman's Auxiliary annual meeting was provided with full-time extensive news coverage by means of advance news releases and special packets, operation of a press room at Auxiliary headquarters in Atlantic City, and follow-up informational services. A publicity evaluation revealed excellent nationwide coverage by wire services, women's page editors and syndicated women's columnists.

Other Groups.—Literature and program-planning help were given on a continuing basis to such groups as the General Federation of Women's Clubs and the National Association of Business and Professional Women.

MEMBERSHIP SERVICES

In addition to the "Science and Service to Humanity" brochure, the department also: produced a speech-and-slides package, "*The New Model AMA,*" which was used by more than 35 medical societies and by Association officials to describe AMA reorganization and current projects; initiated a many-faceted program to create a positive "*corporate image*" of the AMA; handled the *guided tour program* at Chicago headquarters, which served over 200 physicians and other visitors, and conducted a seven-week training course for new guides.

Department of Medical Motion Pictures and Television

Clinical Meeting.—Twenty-six films were shown at the Minneapolis meeting, drawing a total attendance of 2,909. Premiere showings were "Fire and Explosion Hazards from Flammable Anesthetics" and "Routine Pelvic Examination."

Annual Meeting.—The Atlantic City program included 53 films, five of which had their premiere showings. An audience of 850 attended the premiere of "Hospital Sepsis—A Communicable Disease," produced cooperatively by the AMA, American College of Surgeons and American Hospital Association, with the financial assistance of Johnson and Johnson.

New Films.—In production were a film on patient rehabilitation for the general practitioner, expected to be ready for the 1959 clinical meeting, and one on children's health examinations, being produced by the Smart Foundation in cooperation with the AMA and the American Academy of Pediatrics.

Catalogs and Reviews.—A pediatric film catalog, prepared jointly by the AMA and AAP, attracted 130 requests. A revised edition of the AMA film library catalog was distributed to medical societies and other interested groups. The department prepared and published in the AMA Journal 63 medical motion picture reviews and one illustrated review.

Film Library.—Bookings of medical films totaled 6,595, an increase of 779 over the previous year. Added to the library were 178 prints of 27 new subjects. This brings the total up to 1,132 prints of 215 subjects.

Special Activities.—The department manager organized and supervised a 60-film program for the 15th General Assembly of the *Japan Medical Congress*, attended by more than 30,000 physicians and medical students. The department made plans for an afternoon film program and a demonstration and discussion program on the use of audio-visual methods in postgraduate medical education for the *Second World Conference on Medical Education.*

Today's Health

Size, Format and Content.—To provide a greater number and variety of articles attracting public interest, Today's Health nearly doubled its editorial content during the year. The number of pages has increased from 56 to 80, with a planned expansion to 88. The inventory of articles hase been enlarged, and new ground rules covering the submission of material have been established through meetings with members of the Society of Magazine Writers and other authors. Close editorial coordination has been set up between Today's Health and the medical specialties and the American Dental Association.

Policy Coordination.—Increased effort is being made to keep the editorial content of Today's Health more closely geared to AMA policies and programs. For example, a total of eight articles appeared on the subjects of aging, freedom of choice of physician and automobile seat belts.

Promotion Efforts.—To help gain more extensive circulation in doctors' offices, the House of Delegates at Atlantic City approved the inclusion of Today's Health as a benefit of dues-paying membership and urged physicians to make the magazine available to their patients. To make writers, editors and advertisers more aware of Today's Health, complimentary copies of each issue now are sent to the Society of Magazine Writers, Advertising Club of New York, Chicago Press Club, Overseas Press Club in New York, National Press Club in Washington and to a select list of science writers and syndicated columnists.

Reprints and Pickups.—Numerous Today's Health articles have been reprinted in such publications as the Congressional Record (four times); Reader's Digest (five times), and the State Department's Russian-language magazine, America Illustrated. Four new books will incorporate material from the magazine. A total of 1,074,500 requested reprints of articles were supplied to schools, physicians and organizations. Stories based on Today's Health articles, and distributed via the press section's weekly news release, were quoted frequently by newspapers and newscasters throughout the country.

The AMA News

A Star Is Born.—The Association's newest publication, the biweekly AMA News, came out for the first time on Sept. 22, 1958. During the period of this report 21 regular issues were published. Spontaneous acceptance of the newspaper required a press run increase of 41,327 in the first two months. By June 30, 1959, circulation was 264,130, reaching more physicians than any other medical publication.

Quotes and Reprints.—Although the News is still a relatively young publication, it has been widely quoted and reprinted both here and abroad in newspapers, magazines, state and county medical journals, trade papers, hospital and health publications, chamber of commerce bulletins, pharmaceutical periodicals, college and university publications, insurance bulletins and magazines, farm journals, science and military publications and reports of U. S. congressional committees. News articles also have served as the basis for editorials, quotes in editors' personal columns, comments in nationally syndicated health columns, network radio and television commentary, regular weekly health programs for radio stations, and weekly newspaper science and medicine departments.

Commendations.—Hundreds of physicians have sent commendatory letters. Very few critical letters have been received. Several medical societies and medical journals have expressed approval of the new publication. The AMA House of Delegates at Minneapolis heartily approved and lauded the purpose, content and format of the News and recommended continuance of the publication under its present and established policies.

CONCLUSION

The work of the division is constantly expanding as it becomes not only the public relations arm of the profession but also a functioning communications service unit for the Association. The division wishes to express its appreciation to the House of Delegates, Officers and Trustees of the Association, state and county medical societies, departments and staff members at AMA Headquarters, Physicians Advisory Committee on Television, Radio and Motion Pictures and Advisory Committee to the Director of Communications, for their help and cooperation during the period of this report.

REPORT OF THE FIELD SERVICE DIVISION

The staff of the Field Service Division is composed of:
Aubrey D. Gates, *Division Director*
Reuben M. Dalbec, *Field Representative*
Glenn Gillette, *Field Representative*
Charles Johnson, *Field Representative*
Richard Nelson, *Field Representative*
Cecil Dickson, *Legislative Representative*
James W. Foristel, *Legislative Representative*
D. Harold Slater, *Legislative Representative*
R. O. Beckman, *Consultant on Aging*

The Field Service Division was created by action of the Board of Trustees in August, 1958. The following statement of purposes, objectives and functions of the Field Service Division was approved by the Executive Vice President and the Board of Trustees.

I. Purpose:

The Division of Field Service shall serve as an operational and liaison arm of the AMA with the state and local medical societies in specified activities. It shall serve in conjunction with, in support of, and as a service to all Divisions and Departments of AMA in the field as may be agreed upon by the respective directors or as may be directed by the management.

II. Objectives:

A. To further develop the spirit of teamwork between AMA and the state societies.
B. To help create among AMA members a recognition of their identity of interest with the AMA.
C. To assist in locating, cultivating, and developing a better understanding and closer working relationship with appropriate lay organizations.

III. Functions:

A. To gain and maintain the complete confidence, understanding and cooperation of the executive secretary, principal officers, and governing bodies of each state society.
B. To detect adverse criticism of the AMA, and transmit the information to the management.
C. To locate in organized medicine any points of friction, schisms, conflicts, splinter-groups, and attempt to catalyze the correction and healing of such situations.
D. To interpret and promote the services of all units of AMA to constituent societies.
E. To develop a constructive, cooperative working relationship with the members of Congress and their supporters and friends.
F. To facilitate the utilization by lay organizations of AMA resources.
G. To promote such other special activities as directed by the management.

The first undertaking was the staffing of the Division. This was accomplished after carefully surveying the field as to available talent, many interviews, and numerous discussions with the Executive Vice President and the Assistant Executive Vice President. On November 1 and 15, 1958, the four Field Representatives went on active duty. A period of orientation through the month of November and the Clinical Session in Minneapolis, was pursued in order to get as thorough an understanding of the Association, its structure, its philosophy, its services, and its management, as possible. Each of the Field Representatives was assigned twelve states. These are not located in one geographic region of the United States. For efficiency in travel they were grouped in two or three adjacent states, but located in different areas of the country. This was done to give each Field Representative an opportunity to know and be able to evaluate problems in all parts of the country, While it is acknowledged that medicine is practiced much the same in all parts of the country, the philosophic, social and economic outlook of physicians and the public is different in different areas. It is necessary for men occupying positions of this type to understand fully these variations and to interpret them to AMA staff and management.

In November and December each Field Representative visited enough states to be able to relate the services of the association to the needs of the states and to gaining better perspective of the functions that they would perform in the field.

Beginning on January 1, 1959, and continuing throughout this year, they have systematically visited the states, endeavoring to carry out the over-all purposes, objectives and functions of the Division, and have reported back to the Association in an effort to reflect problems and opportunities of serving the constituent and component Associations.

Every state has been visited by the Field Representative a minimum of three times during the year, and many of the states have been visited numerous times, depending upon situations and needs.

In addition to general representation of the Association and its services in the field, a number of special activities have been pursued. In a special effort to establish closer liaison with the American Hospital Association, we have made contacts in the states with the medical staffs and hospital administrators. Out of this, we believe, has come a climate for better cooperation between the two Associations.

In our efforts to further the Association's policy with reference to legislative activities, the Field Service Division has devoted major attention to developing a closer liaison between the Communications Division, the Law Division, the Council on Legislative Activities, the Keyman System, and the state association's executive officers and their legislative committees.

We have given concentrated assistance to some states where key members of the Congress reside in an effort to establish better liaison between the physicians and the Congress. In other states, we have worked on an extensive basis to do the same thing with all members of Congress. This has been principally in the field of providing more information to the Congressmen and better contacts with them and with others interested in medical legislation, from physicians, medical organizations, lay readers and lay organizations.

The Field Service Division has devoted a considerable amount of time to the promotion of programs such as the AMA Six Point Program for the Aged, community types of endeavors in the nursing home field, and related activities. We have called to the attention of the state associations, the opportunities for working with governors of states in setting up committees and commissions for the aged, and planning and holding state conferences on aging in 1959 and 1960. We have also worked with the states in getting physicians designated by governors to be a part of the state's delegation to the White House Conference.

The Field Representatives have worked at an expanded program of getting acquainted with many different kinds of organizations and institutions within states. Field Representatives have, for example, in certain states initiated a program of establishing new contacts between state and local medical groups, with newspaper editors, civic organizations of many types, farm organizations and women's organizations. We have not yet begun to reach the potential available in this phase of our program.

The Division has endeavored to further the specific activities resulting from Forand Task Force considerations and administrative suggestions. It has done its utmost in these initial months to further the entire program of the AMA as projected by and through the various Divisions and Departments of the Association.

The staff of this Division is appreciative of the support and cooperation it has had from the management, the several Divisions and Departments of AMA headquarters, and from the constituent and component associations and societies.

In early December 1958, the Executive Vice President directed the Division to assume responsibility for establishing Washington legislative liaison with Congress. The initial staffing function of two men in the Washington office was achieved by January 1, 1959. This staff has now been expanded to three members, who serve as the AMA's listening post and Legislative Contact Representatives.

A short-term function of the Division has been that of establishing contacts with, and making a study of, Golden Age clubs and similar types of groups of the aged. The information gained has been studied by the other Divisions of the AMA in an effort to understand attitudes of these groups, and realize opportunities to serve them better through local medical organizations.

REPORT OF THE LAW DIVISION

This report covers the activities of the Law Division from July 1, 1958, to June 30, 1959. During this period the Division has continued to operate as the coordinating agency for the legal activities of the Association. In addition the Division provided staff assistance for the Judicial Council, the Council on Legislative Activities, the Council on Constitution and Bylaws, the Committee on Medicolegal Problems and numerous other temporary committees.

Under the direction of the Executive Vice President, the Division has acted as legal adviser to the Board of Trustees and the House of Delegates as well as to the officers and executive staff of the Association. This work has involved a variety of legal problems dealing with contracts, taxes, leases, copyrights, trade marks, anti-trust law, libel, slander and insurance.

Liaison Activities

Association Work.—Each of the attorneys on the staff of the Division continued to maintain liaison with one or more of the Association's permanent councils and committees by attending meetings, assisting in the answering of correspondence, reviewing prospective programs and giving oral and written legal advice. In addition, members of the staff have attended meetings and have provided legal and administrative assistance to numerous temporary committees and subcommittees of the Association. Examples of these special committees staffed by the Director or members of the staff of the Law Division include:

American Medical Association-American Bar Association Liaison Committee
American Medical Association-American Hospital Association Liaison Committee
American Medical Association-American Bar Association Committee on Narcotic Drugs
American Medical Association-American Hospital Association Medicolegal Education Committee
Medical Disciplinary Committee
Committee to Study Political Activities
Joint Committee to Study Paramedical Areas in Relation to Medicine.

Medical Societies and Individual Physicians.—The Division has, through correspondence and personal visits, maintained contact with state and county medical societies. Representatives of the Division have on request spoken at or presented programs on medicolegal subjects at state and local medical meetings and at joint medicolegal conferences.

The staff of the Division has also staffed and explained exhibits on medical professional liability and chemical tests for intoxication at state and county medical meetings. These exhibits have been shown on eight occasions.

In an effort to keep the legal counsel and executive secretaries of the medical societies advised of current legal activities, court decisions and trends affecting medical societies and individual physicians, the Law Division has continued the publication of a newsletter identified as "The Citation." One issue a month was published during the period covered by this report.

Although a statistical record has not been kept of the number of letters received and answered there is no doubt that several thousand inquiries were handled by the Division. These letters from individual physicians, attorneys, medical societies and other organizations deal with a wide variety of problems in the medical-legal field.

Medicolegal Relations.—During the period of the report the Division has encouraged and participated in joint medicolegal conferences at the national, state and local levels. Assistance has also been provided in the negotiation of written codes of understanding between physicians and attorneys. A National Interprofessional Code was approved by the House of Delegates of the American Medical Association and the House of Delegates of the American Bar Association in June and August, 1958, respectively.

Medicolegal Symposiums.—The Division presented a third series of three regional medicolegal symposiums in March and April, 1959. More than 1,100 physicians and attorneys from forty-four states, the District of Columbia, Puerto Rico and Canada attended the meetings which were held in Washington, D. C., March 20-21, Cleveland, Ohio, April 3-4, and Salt Lake City, Utah, April 17-18.

Each was devoted to the same general topics which were:
Narcotic Addiction
Res Ipsa Loquitur in Medical Professional Liability Cases
Impartial Medical Testimony
Traumatic Neurosis
Cross-Examination of Expert Medical Witnesses
The Approach of Physicians and Attorneys to Contingent Fees

The offic [illegible] three conferences were issued in a [illegible] which was sent to all the participants [illegible] the meetings.

Preparation or Review of Published Material

The Division has continued to work closely with the editors and the staff of The Journal, Specialty Journals, Today's Health and the AMA News—preparing special articles, book reviews, news stories and editorials. Assistance has also been provided in reviewing material with possible legal implications submitted from others sources.

The following list indicates the material prepared by the Division and the dates of publication:
Follow-up Study of Fatal Penicillin Reactions—June 28, 1958
Tax Deduction of Postgraduate Education—August 16, 1958
Impartial Medical Testimony—September 6, 1958
Comments on Film Dealing with Traumatic Neurosis, "The Man Who Didn't Walk"—September 6, 1958
Tort Liability of Charitable Hospitals to Patients—October 11, 1958
Tax Deduction of Professional Entertainment Expenses—November 15, 1958
National Interprofessional Code for Physicians and Attorneys—November 22, 1958
Averting Professional Liability Actions—April 25, 1959
Liability of Governmental Hospitals for Negligence—May 30, 1959
Coverage and Exclusions of Professional Liability Insurance—June 13, 1959
Survey of Professional Liability Insurance—June 20, 1959

Special Projects of Medicolegal Significance

During the year the Division planned, developed and directed a number of projects of substantial importance to the medical profession and the Association. Some of the more important ones were:

Medicolegal Film Series.—The Division assisted in the preparation of the script and in the production of two medicolegal films. The first entitled "No Margin for Error" dealt with in-hospital medical professional liability. This film was previewed at the Mid-Winter Meeting of the American Hospital Association in Chicago in February, 1959.

The second film entitled "A Matter of Fact" presented a discussion of the coroner versus the medical examiners system. These films were the fourth and fifth in a series of six being prepared jointly by the American Medical Association and the American Bar Association with the financial assistance of the Wm. S. Merrell Company of Cincinnati.

Student Medicolegal Program.—Members of the staff of the Division participated in and helped to organize a medicolegal day for senior medical and law students from Creighton University and the University of Nebraska. The meeting was held in Omaha on February 21.

Opinion Survey of Attorneys.—In an effort to assess the opinion of the legal profession with respect to medical professional liability, medical testimony and interprofessional relations, a questionnaire was prepared and distributed to approximately 8,600 attorneys. The questionnaires were sent to the entire membership of the sections on Insurance, Judicial Administration and Criminal Law of the American Bar Association. To date a total of 5,042 usable questionnaires have been returned. This represents a 58.95% of usable responses. Information contained in the questionnaires is now being coded and tabulated. It is intended that an article will be prepared for publication in *The Journal of the American Medical Association* and the *Journal of the American Bar Association* within the next six months.

Analysis of Medical Professional Liability Insurance.—A study of the standard provisions of medical professional liability insurance policies was completed and the results published in a special article in The Journal. A survey was also made of insurance companies to determine company policy with respect to coverage in stated hypothetical situations. The results of this survey were also published in a special article in The Journal.

Medical Legislative Handbook.—A National Medical Legislative Handbook was prepared and distributed to members of the Council on Legislative Activities, state key legislative personnel and executive secretaries. Background information and the status of current legislation in the field of social security and tax legislation have also been distributed.

Political Activities.—A legal memorandum dealing with a discussion of federal laws relative to permissible political activities of individual physicians and medical societies has been prepared and distributed.

Corporate and Tax Status of County and State Medical Societies.—A survey of the corporate and tax status of the state and various county medical societies was completed during the period of this report. A full report of this survey was prepared and distributed to executive secretaries and legal counsel for state medical societies.

Medical Legislative Digest.—In May the Washington Office discontinued the preparation and distribution of the Washington Letter. Responsibility for preparing and distributing current legislative information to key legislative personnel and executive secretaries of state and county medical societies was assumed by the Council on Legislative Activities. The staff work in connection with this publication was taken over by the Law Division. The first issue of the Medical Legislative Digest was published on May 1, 1959. During the period of this report four issues of the Digest were distributed.

"Jury Deliberation" Concerning Traumatic Neurosis.—In an effort to increase the effectiveness of the film on traumatic neurosis entitled "The Man Who Didn't Walk" the staff of the Law Division prepared a taped jury deliberation. In preparing this tape recording seven juries consisting of AMA employees were shown the film and permitted to discuss, as a jury, the points which the film raised in their minds. Their deliberations were recorded and on the basis of this information a script was prepared. From this script a twenty-minute typical jury deliberation was prepared for use following the showing of the film on traumatic neurosis.

Board of Trustees Handbook.—A handbook was prepared by the staff of the Law Division for the Board of Trustees. The Handbook included the standing rules of the Board, excerpts from the Constitution and Bylaws of the Association, selected parliamentary rules of procedure and basic policy statements of the Board of Trustees.

Medicolegal Abstracts

Work is progressing toward the preparation of Volume VI of the permanent bound volumes of medicolegal abstracts which the American Medical Association has been publishing since 1925. This work entails the reading, abstracting and indexing of more than one hundred medicolegal court decisions rendered during the years 1953-1957 in addition to those already abstracted and published in JAMA during those years. This project is scheduled for completion in the near future.

As a continuing project, the Law Division has abstracted for publication in current issues of The Journal, medicolegal court decisions of general interest to the profession. The following are some of the cases which were abstracted and published during the period covered by this report.

Abandonment of Patient.—The court of appeals of Georgia (Carroll v. Griffin, 101 S.E.(2) 764) held that a surgeon who advised a patient that he would not get well until he had had surgical treatment but that he, the defendant, would not take care of him, was not guilty of abandonment in the absence of a showing that the time was critical and the need for surgery immediate.

Denial of Hospital Staff Privileges.—The district court of appeals of Florida (Dade County v. Trombly, 102 S.(2) 394) pointed out that it is not incumbent upon a municipality to maintain a hospital for the private practice of medicine and that a physician has no constitutional or statutory right to practice in a city hospital. A public hospital may make rules for admission to staff or major surgical privileges so long as they are not unreasonable, discriminatory or arbitrary in either meaning or application.

Drug Addiction.—The Supreme Court of New Jersey (State v. White 142 A.(2) 65) held that voluntary drug addiction is no defense to murder unless the addiction so prostrates the faculties as to prevent the formation of the specific intent to kill, in which latter case the crime will be murder in the second degree.

Expert Witnesses.—The court of civil appeals of Texas (Miles v. Meadows, 309 S.W.(2) 284), in a suit involving the performance of a total hysterectomy by an osteopath, permitted M.D.s to testify after a showing that the methods, training, and dangers incident to the operation in question are common to both schools of medical practice and equally recognized.

Libel.—The Supreme Court of North Carolina (Bailey v. McGill, 100 S.E.(2) 860) held that physicians who are witnesses in judicial proceedings to commit an alleged mentally disordered person for confinement, have absolute immunity from civil liability for their material and pertinent affidavits, certificates, and testimony. The plaintiff had been committed following an examination by the two defendant physicians which the plaintiff contended was hurried, superficial and inadequate. His suit for libel was dismissed.

Libel.—The appellate court of Illinois (Judge v. Rockford Memorial Hospital, 150 N.E.(2) 202) held that a letter from a director of nurses in a hospital to the Grievance Committee of a nurse's registry complaining of a nurse's conduct was not libelous since it was sent in good faith by a person having an interest and duty to send it and it was sent to a person having a proper interest in receiving it.

Libel.—The supreme court, special term, Kings County, New York (Anonymous v. Health Insurance Plan of Greater New York, 173 N.Y.S.(2) 74) held that complaints about a physician made to a board set up to hear such complaints were qualifiedly privileged but that such privilege could be destroyed by a showing of excessive publication or malice.

Medical Professional Liability.—The Supreme Court of Delaware (Christian v. Wilmington General Hospital Association, 135 A.(2) 727) emphasized that no presumption of negligence on the part of a doctor arises merely because of an unfavorable result. A sixteen-month-old infant cut her hand on a piece of glass. The fact that a tendon had been severed was not discovered until nearly three months after the accident. The evidence indicated that it is often difficult to discover a severed tendon without the cooperation of the patient and that the infant was crying and struggling. It also appeared that the tendon might have been only partially severed at the time of the original examinations and ruptured later. The court refused to apply the doctrine of res ipsa loquitur in these circumstances.

Medical Professional Liability.—The Supreme Judicial Court of Massachusetts (Fitzgerald v. Leach, 150 N.E.(2) 12) held that a jury was justified in finding that a surgeon was negligent in not distinguishing the superficial tendon from the median nerve. The court stated that a surgeon who operates properly in a field wherein nerves and tendons are exposed will distinguish them and not unite a nerve with a tendon.

Opinion as to Cause of Death.—The court of appeals of Alabama (McMurtrey v. State, 101 S.(2) 88) held that a staff member of the State Department of Toxicology and Criminal Investigation was qualified by study and experience to testify as an expert as to cause of death.

Pretesting for Drug Reaction.—The district court of appeals of California (Horace v. Weyrauch, 324 P.(2) 666) held that a jury would be justified in finding that a doctor was negligent when he failed to inquire of a patient as to her reactions to injections and for his failure to make sensitivity tests when such tests were available.

Privileged Communications.—The Supreme Court of Iowa (Newman v. Blom, 89 N.W.(2) 349) held that the medical records of a patient made in a hospital to which he was taken after an accident and in the handwriting of the attending physician was covered by the state's law relating to privileged communications. The theory was that the record clerk of the hospital became the stenographer or confidential clerk of the attending physician and that the records in her charge taken in a professional capacity were privileged.

Records of Medical Society.—The district court of appeals of California (Tatkin v. Superior Court, 326 P.(2) 201) held that, in a suit for damages for denial of membership in a county medical society, the books, records and documents in the society's files relating to the plaintiff's membership application were subject to subpoena.

Survival of Cause of Action.—The Supreme Court of Michigan (Deeg v. City of Detroit, 76 N.W.(2) 16) said that a surviving widow has a cause of action for the unlawful and intentional mutilation of her husband's dead body. This is a purely personal right however, and does not survive the death of the widow.

Tort Liability of Charitable Hospitals.—The Supreme Court of New Jersey (Collopy v. Newark Eye and Ear Infirmary, 141 A.(2) 276) repudiated the doctrine of the immunity of charitable hospitals from tort liability which had been in effect in the state since 1925.

Tort Liability of Charitable Hospitals.—The Supreme Court of Pennsylvania (Knecht v. Saint Mary's Hospital, 140 A. (2) 30) refused to repudiate the rule of non-liability of charitable hospitals torts committed by employees.

Zoning Restrictions.—The court of appeals of Ohio (Diebel v. Wilson, 150 N.E.(2) 448) held that the practice of medicine was not to be classed as a trade or business and that, under the ordinance in question, a physician could maintain his office in his private residence.

REPORT OF THE DIVISION OF SCIENTIFIC ACTIVITIES

Organization.—During the period between July 1, 1958 and February 9, 1959, the Division of Scientific Activities was coordinated through the office of Dr. E. B. Howard, Assistant Executive Vice President of the American Medical Association. Throughout that period, following the 1957-1958 annual report, the various councils and committees comprising the Division conducted their duly designated responsibilities with essentially no deviation from established pattern.

The current Director of the Division assumed this assignment immediately following the 55th Annual Congress on Medical Education and Licensure in February 1959. Although the first two months following this assignment necessitated clearing, as well as completing, many commitments made as Secretary of the Council on Medical Education and Hospitals, the major portion of the six months through June 30 was devoted to an effort to become familiar with the activities of the various departments, councils, committees, laboratories, etc., encompassed within the Division of Scientific Activities.

Insofar as possible, the Director has endeavored to attend scheduled meetings of the various councils and committees within the Division. So far this has included the Council on Medical Education and Hospitals, Committee on Cosmetics, Council on Foods and Nutrition, Committee on Research, Council on Scientific Assembly, Council on Mental Health, and the American Medical Education Foundation. In addition, special meetings have been held in connection with the A. M. A. Chemical Laboratory and with the Committee on Atomic Medicine and Ionizing Radiation.

There have been innumerable conferences dealing with such matters as the status of the Department of Investigation, possible changes in the format of the scientific and commercial exhibits, pharmaceutical and other advertising, possible staffing and activating of the American Medical Research Foundation, etc.

Early in this assignment it was believed that future progress might be enhanced through the medium of a conference designed to identify the current, important issues in medical education and medical science, and objectively scrutinize just what the American Medical Association has accomplished, is doing, and has projected in these areas. Consequently, in March the idea of inviting a group of fifteen to twenty outstanding physicians and scientists in allied fields to serve as an "ad hoc" advisory committee to assist in an objective analysis of this type was presented to the administration. It was believed that such a conference should be attended by members of the Board of Trustees and A. M. A. officials, as well as the chairmen and administrative officers of the various councils and committees within the Division. It was proposed, furthermore, that such a meeting be held in a quiet, pleasant environment and that it be planned to cover a two and one-half day period. Subsequent approval of this proposal by the administration and Board of Trustees made it possible to arrange for the conference to take place at Hershey, Pennsylvania, September 14-16. Since the details concerning the conference program have already been distributed, no further comment is indicated in this report. It is hoped that this conference will be a valuable experience for those who attend, and that it will assist in guiding subsequent thinking and planning as to how A. M. A.'s scientific activities may be of greatest possible value to the profession in the future.

Personnel.—A number of personnel changes of importance have occurred within the Division during the course of the year. These include:

A—Council on Medical Education and Hospitals
  Dr. Walter S. Wiggins appointed as Secretary
  Dr. Arthur S. Cain appointed as Associate Secretary (to begin duties in October)

Dr. George H. Miller appointed (part-time) to field staff
Dr. Winchell Craig appointed (part-time) to field staff
Dr. William Fellows appointed (part-time) to field staff

B–Department of Therapy and Research

Dr. Robert T. Stormont, director, resignation as of September 1
Dr. John H. Ballin, assigned as Acting Chairman of Advertising Committee
Dr. John Hefferren, resignation from Chemical Laboratory staff to become director of ADA Chemical Laboratory

C–Council on Scientific Assembly

Dr. Charles H. Bramlitt appointed as Secretary to succeed Dr. Thomas Hull, currently acting as Secretary until Dr. Hull's retirement on January 1, 1960

D–Council on Mental Health

Dr. Richard J. Plunkett reassigned as full-time Secretary

The resignation of Dr. Stormont necessitated reconsideration of the organizational structure of the Department of Therapy and Research. In order to bring about the necessary direct interplay between the secretaries of the various councils and committees with the office of the Division Director, it was recommended that the position of Director of the Department of Therapy and Research be eliminated. Eventual administrative reorganization within the Division will reduce the number of staff administrative officers reporting to the Division Director.

The role played by Dr. Stormont as Chairman of the Advertising Committee has been assigned to Dr. John Ballin. A completely new set of "Principles" related to A. M. A. advertising is currently being developed by a committee representing the Business Division as well as the Division of Scientific Activities. Following clearance with the Law Division, these advertising principles will be presented to the administration with a recommendation for their adoption. It is hoped that both the American Medical Association and the Pharmaceutical Manufacturers Association will cooperate in the establishment of these as sound, mutually acceptable working principles, as far as advertising is concerned.

There are certain facets of the Division of Scientific Activities which merit special consideration during the period ahead. Some of these matters impinge upon activities of other divisions and necessitate thoughtful, cooperative approaches seeking adequate solutions. For example, the concern of the Committees on Toxicology and Pesticides includes interests common also to the Council on Industrial Health. Furthermore, there are gaps in the general field of environmental hazards not encompassed by any current aspect of A. M. A. organization. This example emphasizes the need for broadening the scope of concern through the development of an organizational structure covering the general field of public health, in which areas of interest such as these may be appropriately coordinated. Such a development would result in strengthening potential achievement and eliminating much of the duplication of effort that currently may be involved.

Similar problems are encountered in connection with the activities of the Committee on Research. While it is true that this Committee was given rather broad functions at the time of its reorganization in 1950, its activities have remained circumscribed. This has probably been due to the organizational structure whereby it did not function as a general committee on research, but as a subcommittee of the Council on Drugs. It may well be that there should be a Committee on Research within each of the divisions where such activities are being conducted. In such instances, the committee should be representative of the broad interests within the division. However, one of the most imperative needs in the projection of research for the American Medical Association is the development of a strong committee on research representing all fields of its concern (education, science, socio-economic, legal, etc.).

Last November (1958) the Board of Trustees voted that the activities of the Committee on Cosmetics be absorbed by the Council on Drugs, and that the Committee be terminated as of December 1959. Following receipt of this information, the Committee on Cosmetics requested reconsideration. The Board of Trustees in February (1959) referred the matter to its Committee on Scientific Activities which has the matter under study.

The Department of Investigation has served a useful role over the years and conducts a type of activity that has been of value to the profession and to the public. Its functions are investigation and education. Its investigative functions are primarily associated with quackery in the field of diagnosis and therapy, but in toto encompass the broad field of quackery and imposture in the field of healing arts. Its educational functions are directed to the profession and to the public. Its potential legal entanglements are of genuine concern. This is, again, an area that transcends the divisional lines (scientific, socio-economic, legal, communications). A task force has recommended that this department be directly responsible to the Director of the Division of Socio-Economic Activities and that its educational efforts be allied to those of the Department of Health Education.

During the past year, the American Medical Education Foundation has continued to make progress in further enlarging the number of contributors and in the total funds obtained through its efforts. If it had accomplished nothing else during its period of existence than the creation of awareness within the profession of the financial problems of medical education, the American Medical Education Foundation would have justified its existence. Actually, it has accomplished far more. It has stimulated the development of alumni giving in many schools where little or none existed previously. It has aided in public education. It has helped in improving medical school-professional liaison in many areas. Some of its contributions must be classified as intangibles that are existent but difficult to define.

The Council on Medical Education and Hospitals faces constantly increasing challenges in every aspect of its activities. Its staff nucleus was temporarily depleted as result of administrative reorganization (Turner, Wiggins, etc.) and is currently carrying a very heavy burden. The administrative readjustments have necessitated delay and reorientation of certain aspects of the Council's work, notably the "on location" studies in the field of continuing medical education. The arrival of Dr. Arthur Cain in October will help to overcome this situation.

The additional responsibilities involved in staffing the Committee on Nursing, and the Committee on Relations Between Medicine and Allied (Paramedical) Areas have loaded this Council staff almost to the point of no return. It is to be hoped that decision will be reached in the near future which will make it possible to bring in additional qualified personnel to undertake major staffing responsibilities in both of these areas. This Council and its staff are eager to seriously reevaluate their past, current and projected activities with the hope of determining their most effective role in the period ahead.

In the previous paragraphs I have endeavored to give a brief picture of the Division of Scientific Activities and its current role as I have seen it during the period of February 1 through June 30. This has been a broad generalization through which I have endeavored to indicate that the division represents a heterogeneous group of activities, presenting many interesting problems and challenges. It is obvious that solutions to them involve long range planning, cooperation, diplomacy and common-sense. It will necessitate improved, coordinated thinking and planning and will involve a broad educational approach in which the central objective becomes A. M. A., rather than its segments.

I have also endeavored to convey my belief that in the period ahead there should be major reorganization of some of the components comprising the Division. We are not physician made to a board set up to hear such complaints were qualifiedly privileged but that such privilege could be destroyed by a showing of excessive publication or malice.

Medical Professional Liability.—The Supreme Court of Delaware (Christian v. Wilmington General Hospital Association, 135 A.(2) 727) emphasized that no presumption of negligence on the part of a doctor arises merely because of an unfavorable result. A sixteen-month-old infant cut her hand on a piece of glass. The fact that a tendon had been severed was not discovered until nearly three months after the accident. The evidence indicated that it is often difficult to discover a severed tendon without the cooperation of the patient and that the infant was crying and struggling. It also appeared that the tendon might have been only partially severed at the time of the original examinations and ruptured later. The court refused to apply the doctrine of res ipsa loquitur in these circumstances.

Medical Professional Liability.—The Supreme Judicial Court of Massachusetts (Fitzgerald v. Leach, 150 N.E.(2) 12) held that a jury was justified in finding that a surgeon was negligent in not distinguishing the superficial tendon from the median nerve. The court stated that a surgeon who operates properly in a field wherein nerves and tendons are exposed will distinguish them and not unite a nerve with a tendon.

Opinion as to Cause of Death.—The court of appeals of Alabama (McMurtrey v. State, 101 S.(2) 88) held that a staff member of the State Department of Toxicology and Criminal Investigation was qualified by study and experience to testify as an expert as to cause of death.

Pretesting for Drug Reaction.—The district court of appeals of California (Horace v. Weyrauch, 324 P.(2) 666) held that a jury would be justified in finding that a doctor was negligent when he failed to inquire of a patient as to her reactions to injections and for his failure to make sensitivity tests when such tests were available.

Privileged Communications.—The Supreme Court of Iowa (Newman v. Blom, 89 N.W.(2) 349) held that the medical records of a patient made in a hospital to which he was taken after an accident and in the handwriting of the attending physician was covered by the State's law relating to privileged communications. The theory was that the record clerk of the hospital became the stenographer or confidential clerk of the attending physician and that the records in her charge taken in a professional capacity were privileged.

Records of Medical Society.—The district court of appeals of California (Tatkin v. Superior Court, 326 P.(2) 201) held that, in a suit for damages for denial of membership in a county medical society, the books, records and documents in the society's files relating to the plaintiff's membership application were subject to subpoena.

Survival of Cause of Action.—The Supreme Court of Michigan (Deeg v. City of Detroit, 76 N.W.(2) 16) said that a surviving widow has a cause of action for the unlawful and intentional mutilation of her husband's dead body. This is a purely personal right however, and does not survive the death of the widow.

Tort Liability of Charitable Hospitals.—The Supreme Court of New Jersey (Collopy v. Newark Eye and Ear Infirmary, 141 A.(2) 276) repudiated the doctrine of the immunity of charitable hospitals from tort liability which had been in effect in the state since 1925.

Tort Liability of Charitable Hospitals.—The Supreme Court of Pennsylvania (Knecht v. Saint Mary's Hospital, 140 A. (2) 30) refused to repudiate the rule of non-liability of charitable hospitals torts committed by employees.

Zoning Restrictions.—The court of appeals of Ohio (Diebel v. Wilson, 150 N.E.(2) 448) held that the practice of medicine was not to be classed as a trade or business and that, under the ordinance in question, a physician could maintain his office in his private residence.

REPORT OF THE DIVISION OF SCIENTIFIC ACTIVITIES

Organization.—During the period between July 1, 1958 and February 9, 1959, the Division of Scientific Activities was coordinated through the office of Dr. E. B. Howard, Assistant Executive Vice President of the American Medical Association. Throughout that period, following the 1957-1958 annual report, the various councils and committees comprising the Division conducted their duly designated responsibilities with essentially no deviation from established pattern.

The current Director of the Division assumed this assignment immediately following the 55th Annual Congress on Medical Education and Licensure in February 1959. Although the first two months following this assignment necessitated clearing, as well as completing, many commitments made as Secretary of the Council on Medical Education and Hospitals, the major portion of the six months through June 30 was devoted to an effort to become familiar with the activities of the various departments, councils, committees, laboratories, etc., encompassed within the Division of Scientific Activities.

Insofar as possible, the Director has endeavored to attend scheduled meetings of the various councils and committees within the Division. So far this has included the Council on Medical Education and Hospitals, Committee on Cosmetics, Council on Foods and Nutrition, Committee on Research, Council on Scientific Assembly, Council on Mental Health, and the American Medical Education Foundation. In addition, special meetings have been held in connection with the A. M. A. Chemical Laboratory and with the Committee on Atomic Medicine and Ionizing Radiation.

There have been innumerable conferences dealing with such matters as the status of the Department of Investigation, possible changes in the format of the scientific and commercial exhibits, pharmaceutical and other advertising, possible staffing and activating of the American Medical Research Foundation, etc.

Early in this assignment it was believed that future progress might be enhanced through the medium of a conference designed to identify the current, important issues in medical education and medical science, and objectively scrutinize just what the American Medical Association has accomplished, is doing, and has projected in these areas. Consequently, in March the idea of inviting a group of fifteen to twenty outstanding physicians and scientists in allied fields to serve as an "ad hoc" advisory committee to assist in an objective analysis of this type was presented to the administration. It was believed that such a conference should be attended by members of the Board of Trustees and A. M. A. officials, as well as the chairmen and administrative officers of the various councils and committees within the Division. It was proposed, furthermore, that such a meeting be held in a quiet, pleasant environment and that it be planned to cover a two and one-half day period. Subsequent approval of this proposal by the administration and Board of Trustees made it possible to arrange for the conference to take place at Hershey, Pennsylvania, September 14-16. Since the details concerning the conference program have already been distributed, no further comment is indicated in this report. It is hoped that this conference will be a valuable experience for those who attend, and that it will assist in guiding subsequent thinking and planning as to how A. M. A.'s scientific activities may be of greatest possible value to the profession in the future.

Personnel.—A number of personnel changes of importance have occurred within the Division during the course of the year. These include:

A—Council on Medical Education and Hospitals
    Dr. Walter S. Wiggins appointed as Secretary
    Dr. Arthur S. Cain appointed as Associate Secretary (to begin duties in October)

Dr. George H. Miller appointed (part-time) to field staff
Dr. Winchell Craig appointed (part-time) to field staff
Dr. William Fellows appointed (part-time) to field staff

B–Department of Therapy and Research
Dr. Robert T. Stormont, director, resignation as of September 1
Dr. John H. Ballin, assigned as Acting Chairman of Advertising Committee
Dr. John Hefferren, resignation from Chemical Laboratory staff to become director of ADA Chemical Laboratory

C–Council on Scientific Assembly
Dr. Charles H. Bramlitt appointed as Secretary to succeed Dr. Thomas Hull, currently acting as Secretary until Dr. Hull's retirement on January 1, 1960

D–Council on Mental Health
Dr. Richard J. Plunkett reassigned as full-time Secretary

The resignation of Dr. Stormont necessitated reconsideration of the organizational structure of the Department of Therapy and Research. In order to bring about the necessary direct interplay between the secretaries of the various councils and committees with the office of the Division Director, it was recommended that the position of Director of the Department of Therapy and Research be eliminated. Eventual administrative reorganization within the Division will reduce the number of staff administrative officers reporting to the Division Director.

The role played by Dr. Stormont as Chairman of the Advertising Committee has been assigned to Dr. John Ballin. A completely new set of "Principles" related to A. M. A. advertising is currently being developed by a committee representing the Business Division as well as the Division of Scientific Activities. Following clearance with the Law Division, these advertising principles will be presented to the administration with a recommendation for their adoption. It is hoped that both the American Medical Association and the Pharmaceutical Manufacturers Association will cooperate in the establishment of these as sound, mutually acceptable working principles, as far as advertising is concerned.

There are certain facets of the Division of Scientific Activities which merit special consideration during the period ahead. Some of these matters impinge upon activities of other divisions and necessitate thoughtful, cooperative approaches seeking adequate solutions. For example, the concern of the Committees on Toxicology and Pesticides includes interests common also to the Council on Industrial Health. Furthermore, there are gaps in the general field of environmental hazards not encompassed by any current aspect of A. M. A. organization. This example emphasizes the need for broadening the scope of concern through the development of an organizational structure covering the general field of public health, in which areas of interest such as these may be appropriately coordinated. Such a development would result in strengthening potential achievement and eliminating much of the duplication of effort that currently may be involved.

Similar problems are encountered in connection with the activities of the Committee on Research. While it is true that this Committee was given rather broad functions at the time of its reorganization in 1950, its activities have remained circumscribed. This has probably been due to the organizational structure whereby it did not function as a general committee on research, but as a subcommittee of the Council on Drugs. It may well be that there should be a Committee on Research within each of the divisions where such activities are being conducted. In such instances, the committee should be representative of the broad interests within the division. However, one of the most imperative needs in the projection of research for the American Medical Association is the development of a strong committee on research representing all fields of its concern (education, science, socio-economic, legal, etc.).

Last November (1958) the Board of Trustees voted that the activities of the Committee on Cosmetics be absorbed by the Council on Drugs, and that the Committee be terminated as of December 1959. Following receipt of this information, the Committee on Cosmetics requested reconsideration. The Board of Trustees in February (1959) referred the matter to its Committee on Scientific Activities which has the matter under study.

The Department of Investigation has served a useful role over the years and conducts a type of activity that has been of value to the profession and to the public. Its functions are investigation and education. Its investigative functions are primarily associated with quackery in the field of diagnosis and therapy, but in toto encompass the broad field of quackery and imposture in the field of healing arts. Its educational functions are directed to the profession and to the public. Its potential legal entanglements are of genuine concern. This is, again, an area that transcends the divisional lines (scientific, socio-economic, legal, communications). A task force has recommended that this department be directly responsible to the Director of the Division of Socio-Economic Activities and that its educational efforts be allied to those of the Department of Health Education.

During the past year, the American Medical Education Foundation has continued to make progress in further enlarging the number of contributors and in the total funds obtained through its efforts. If it had accomplished nothing else during its period of existence than the creation of awareness within the profession of the financial problems of medical education, the American Medical Education Foundation would have justified its existence. Actually, it has accomplished far more. It has stimulated the development of alumni giving in many schools where little or none existed previously. It has aided in public education. It has helped in improving medical school-professional liaison in many areas. Some of its contributions must be classified as intangibles that are existent but difficult to define.

The Council on Medical Education and Hospitals faces constantly increasing challenges in every aspect of its activities. Its staff nucleus was temporarily depleted as result of administrative reorganization (Turner, Wiggins, etc.) and is currently carrying a very heavy burden. The administrative readjustments have necessitated delay and reorientation of certain aspects of the Council's work, notably the "on location" studies in the field of continuing medical education. The arrival of Dr. Arthur Cain in October will help to overcome this situation.

The additional responsibilities involved in staffing the Committee on Nursing, and the Committee on Relations Between Medicine and Allied (Paramedical) Areas have loaded this Council staff almost to the point of no return. It is to be hoped that decision will be reached in the near future which will make it possible to bring in additional qualified personnel to undertake major staffing responsibilities in both of these areas. This Council and its staff are eager to seriously reevaluate their past, current and projected activities with the hope of determining their most effective role in the period ahead.

In the previous paragraphs I have endeavored to give a brief picture of the Division of Scientific Activities and its current role as I have seen it during the period of February 1 through June 30. This has been a broad generalization through which I have endeavored to indicate that the division represents a heterogeneous group of activities, presenting many interesting problems and challenges. It is obvious that solutions to them involve long range planning, cooperation, diplomacy and common-sense. It will necessitate improved, coordinated thinking and planning and will involve a broad educational approach in which the central objective becomes A. M. A., rather than its segments.

I have also endeavored to convey my belief that in the period ahead there should be major reorganization of some of the components comprising the Division. We are not, adequately fulfilling needs in some areas. Some segments may well be incorporated into new, broader areas. Some probably should be eliminated, or materially modified. New tasks may necessitate materially altered framework. In other words, there is a task to be done that will demand leadership, teamwork, understanding and a lot of work, and it will not be easy.

In addition to attempting to understand the implications of the assignment as Director of the Division of Scientific Activities, I have continued to follow through on a number of commitments of liaison nature, all with administrative sanction. These include:

A—Membership on the advisory groups of The Surgeon General (P. H. S.) on Needs in Medical Education, and active participation in the Steering Committee for this study
B—Consultant to the Education and Training Division of the office of The Surgeon General (U. S. A.)
C—Consultant on Education and Training Programs of the Office of Vocational Rehabilitation
D—Participant in conferences on problems in connection with development of medical school and teaching hospital programs with the State University of New York (Brooklyn Division), and the University of Colorado
E—Medical advisory committee on education and training grants of the National Foundation
F—Advisory Committee to the National Fund for Medical Education
G—Secretary-Treasurer and Chairman of the Executive Committee of the American Medical Education Foundation
H—A. M. A. representative on the National Academy of Sciences, etc.
I—Medical Advisory Committee, W. K. Kellogg Foundation
J—Medical Advisory Committee to Western Interstate Commission on Higher Education
K—Member Commission on Survey of Dental Education (Educational Advisory Committee) of the American Council on Education

I wish to express my very deep appreciation for the cooperation which my colleagues in the Division of Scientific Activities have given to me during this period since I have undertaken this new assignment. It is my sincere hope that with their further cooperation and support it will be possible to project a constructive period ahead and that next year's report may indicate at least partial solutions to some of the many challenges and problems within the Division.

Respectfully submitted,
Edward L. Turner, M.D., *Director*
Division of Scientific Activities

REPORT OF THE DEPARTMENT OF THERAPY AND RESEARCH

The various groups within the Department have constantly endeavored to expand their activities and improve their programs of operation with the view of rendering a better service to the medical profession and also the public. The development of new drugs and other new potential aids for the diagnosis, prevention, and treatment of disease has continued to proceed with constantly increasing rapidity. In order to meet this challenge the evaluation of data or evidence and the publication of concise and authoritative scientific reports has been increased significantly. The Director of the Department has endeavored to exercise general supervision over the heads of the various sub-departments and has frequently advised or directed them regarding the best way of handling important problems or matters relating to basic policies.

The Director of the Department has continued to serve as Chairman of the Advertising Committee for the scientific publications of the A. M. A. In this capacity he has had the responsibility of making certain that all proposed advertising copy for these publications is screened in order to insure compliance with the A. M. A. principles governing advertising. The task of determining the eligibility of products for advertising has often been tedious and difficult, particularly when the findings of various clinical studies were in conflict. Products that were of unestablished therapeutic value have been ruled ineligible. Likewise, irrational or "shotgun" mixtures of drugs have been rejected for advertising. A considerable amount of time has been spent in making deletions or appropriate revisions of proposed claims or statements which were judged to be in violation of our governing principles. Every effort has been made during the past year to continue the established policy of being as fair and consistent as possible in screening all proposed advertising copy and of maintaining our standards at as high a level as is both possible and practicable.

REPORT OF THE DEPARTMENT OF INVESTIGATION

During the reporting year ended June 30, 1959, the Dept. of Investigation received written inquiries on approximately 4,600 subjects. (The Dept. maintains files of information on quacks, nostrums, and other phases of pseudo-medicine.) No record has been kept of the number of telephone inquiries, or of the time spent in answering or discussing these subjects in utilizing this medium of communication.

Cancer "cures" remained the No. 1 subject of interest. More than 500 inquiries were received on such treatments during the year. Vitamin and mineral products continued in second place, while inquiries on the many gadgets and devices were in third place. A growing interest in the activities of the cultists placed them ahead of reducing preparations, for some reason, although it is true that inquiries on the latter subject are seasonal. Some of the gadgets, such as the vibrators and the electrical "muscle stimulators," may, however, be categorized as "reducers." Arthritis and rheumatism "cures" were next as a subject of inquiries.

Of significance was the imprisonment of Dr. Robert H. Reddick of Baltimore who was trafficking in homeopathic licenses in Maryland.

The reporting year witnessed also an almost complete disappearance of interest in such "rejuvenators" as Pega Palo, Royal Jelly, and the "sicca-cell" therapy which was supposed to have rejuvenated several prominent persons. An increased interest in rejuvenation, however, resulted from the publicity in a popular magazine (*Coronet*, December 1958) for something involving the parenteral use of procaine hydrochloride as a geriatric panacea.

Of more interest, perhaps, are the recurring invitations to the Director to address lay groups on the subject of medical quackery. A recounting indicates that talks were made on this subject from coast to coast, addressing both medical and lay groups. The total number of speeches was 50, and the groups ranged in size from more than 400 to less than 50. In addition, a former staff assistant, now employed by the Los Angeles County Medical Association, addressed a number of groups in his immediate area on the same interesting and informative subject. Dr. Louis M. Orr, President of the American Medical Association, also gave several talks on quackery and utilized the kit of "props," which includes actual gadgets and bottles and boxes of "patent medicines" which have been sold under false and misleading claims.

In addition to the speeches, six radio interviews and four television appearances were made by the Director during the year. There was also the manning of the exhibit on "Mechanical Quackery" at the Green County Fair in Monroe, Wis., the Pennsylvania Farm Show at Harrisburg, Pa., and the Columbus Health Fair at Columbus, Ohio.

The Director attended meetings of the Committee on New or Unproved Methods of Treatment of the American Cancer Society in New York and Boston, and the annual meeting of the Illinois Division of that Society in Chicago, and participated in meetings of the Public Relations Institute and the Ohio State Medical Association.

One report was accepted for publication in THE JOURNAL of the American Medical Association.

REPORT OF THE CHEMICAL LABORATORY

During the first seven months of this past year the major portion of the time of the laboratory staff was spent on the establishment of tests and assays for nonofficial drugs. These tests and assays, established in cooperation with pharmaceutical firms, represent an expression of opinion as to what might constitute adequate tests for these drugs. Monographs for the following drugs have appeared in "Drug Standards" this year: aminopentamide sulfate, chloroprocaine hydrochloride, decamethonium bromide, heptabarbital, hydrocortisone cyclopentylpropionate, mephenesin carbamate, penthienate bromide, phensuximide, piperazine calcium edathamil, procyclidine hydrochloride, pyrimethamine, pyrrobutamine phosphate, sitosterols, and tetrahydrozaline hydrochloride. In addition, monographs were also completed on chlorisondamine, dyclonine hydrochloride, methylphenidate hydrochloride, phenmetrazine hydrochloride, pipenzolate methylbromide, piperidolate hydrochloride, promazine hydrochloride and promoxolane.

During this past year, at the request of the American Medical Association, an Ad Hoc Committee met at A. M. A. headquarters to study and discuss the drug standards program of the Chemical Laboratory. Representatives of the Food and Drug Administration, the United States Pharmacopeia, the National Formulary, the pharmaceutical industry and the medical profession took part. The discussion centered around the desirability, necessity and responsibility of the A. M. A. laboratory in drug standardization. The purpose was to obtain a clearer and broader understanding of this problem.

A study was made on the *in vitro* determination of the rate of release of sustained release medication products of various manufacturers. The results were published in "Drug Standards" (27:1-6 (Jan.-Feb.) 1959). Some preliminary work also was done on attempting to correlate the *in vitro* with the *in vivo* release of sustained release medication.

Work continued on the coding of solid dosage forms of drugs for the "Drug Identification Guide." This scheme, based on the physical characteristics of the solid drug form, was developed to assist in the rapid identification of drugs which are available on the market, and was described in THE JOURNAL (160:479-484 (Jan. 31) 1959). About 2,000 drugs have been coded. Some preliminary studies have been undertaken to determine whether or not it is feasible to code suppositories in a similar manner. In cooperation with the Communications Division an exhibit on the identification guide is being prepared for showing at A. M. A. meetings.

Slightly more than a year ago arrangements were completed with the College of American Pathologists for the use of the facilities and personnel of the Chemical Laboratory for a certification program which the College of American Pathologists is carrying out on hemoglobin standards. Progress along these lines had been relatively slow because of difficulties of instrument standardization. These difficulties have now been largely resolved through cooperative efforts with the College and some of the firms that will market the hemoglobin standards. Samples of the hemoglobin standards manufactured by various firms have been picked up on the open market and checked by the laboratory. We have also checked samples submitted by the Department of National Health and Welfare of Canada.

A project was started to develop a library of ultraviolet and infrared curves of drugs. These curves would be of great value in drug identification work, since they represent one of the best means of drug identification available today.

The laboratory undertook some examinations at the request of groups within the A. M. A. and certain outside agencies. Among these were the identification of some components of blood extractives, a new brand of cigarettes was tested for nicotine and tar content, and a highly advertised delayed release tablet was checked for both contents and its release characteristics.

Dr. John J. Hefferren of the Chemical Laboratory staff has left to assume directorship of the American Dental Association Laboratory.

Laboratory work was severely curtailed in January when it became necessary to move the Division Library into the laboratory because of construction in the office area. In February it became necessary to vacate certain laboratory areas and to move the secretarial personnel into other parts of the laboratory and bench work became impossible.

The time away from the bench was used to start a file on drugs currently on the market or under investigation in order to have a ready reference for the many queries on these products coming from the Editorial Department, Council on Drugs and various outside agencies. Files are being prepared on drugs by trade name, generic name, empirical formula, general chemical category and therapeutic use.

The Laboratory cooperated with various Councils and Divisions within the A. M. A. Considerable time was spent on various aspects of drug nomenclature. All of the structural formulae for drugs which appear in New and Nonofficial Drugs and in drug monographs which appear in THE JOURNAL were drawn by the laboratory. Many of the drug structures needed for other papers published by the A. M. A. were also drawn by the laboratory staff. The laboratory frequently was consulted by the editorial staff concerning the accuracy of chemical statements and nomenclature in articles to be published in A. M. A. journals.

The laboratory staff also was consulted by A. M. A. departments to advise on classification of entries of chemical and pharmaceutical interest for both Quarterly Cumulative Index Medicus and THE JOURNAL. They also advised the Advertising Committee of the A. M. A. with respect to advertising copy containing statements of a chemical nature. Other services to departments within the A. M. A. were concerned with reviewing of articles proposed for publication in THE JOURNAL, answering queries for the Questions and Answers column in THE JOURNAL and reviewing books for THE JOURNAL.

REPORT OF THE DIVISION OF SCIENTIFIC PUBLICATIONS

The Division of Scientific Publications comprises the following four departments:

1. THE JOURNAL of the American Medical Association
2. The A. M. A. Specialty Journals
3. The A. M. A. Library and Quarterly Cumulative Index Medicus
4. The Standard Nomenclature of Diseases and Operations

The reorganization of these departments into a Division became effective in August, 1958, following the approval of the Board of Trustees.

A new departure related to this Division has been the privilege of meeting with the Committee on Scientific Activities of the Board of Trustees to consider important problems related to the four departments. The programs of all of these areas, which were most favorably affected by this action of the Board, are described in detail in another section of the Board report.

The Journal

The period under review, ending June 30, 1959, was the 76th year in the life of THE JOURNAL. In readership and in the average size of each issue, THE JOURNAL continues to grow. Through the years its influence has expanded until now it is read throughout the United States and in 119 other countries.

The editorial material during the year averaged 136.5 pages per issue, which exceeded that of the previous year and was accounted for in part by 662 original articles, special articles and reports, clinical notes, and diagnostic problems. In accordance with the Board of Trustees requirment that the editorial pages at least equal the number of advertising pages, the former exceeded the latter for the year by 332 pages. A specially designed and beautifully illustrated issue was published July 12, 1958, marking the 75th anniversary of THE JOURNAL. An unusual feature of the Anniversary Issue was that most of the contributors were not physicians but industrialists, educators, scientists, news commentators, and writers. THE JOURNAL also published on January 17, 1959, in addition to the regular weekly issues, a 96-page Special Edition comprising the Report of the Commission on Medical Care Plans.

Realizing the increasing importance of discoveries in biochemistry and genetics to the practice of medicine, a successful effort was made to find a biochemist who was also a doctor of medicine, who would prepare editorials to point up the relation of these discoveries to the physician's every-day work. The first editorial in this series appeared in the August 8, 1959, issue.

Two new columns have been introduced among the advertising pages, one entitled "Customs and Idioms," the other "Medical Beliefs of Yesterday." While these columns were started late in the year, they already seem to be well received.

The U. S. Post Office Department has required THE JOURNAL, as it has of other publications, to number the pages in each issue consecutively from the first advertising page on through the editorial matter to the last advertising page in the back. Therefore, beginning January 3, 1959, the pagination in the editorial section has included two sets of numbers separated by a diagonal. The number on the left meets the Post Office Department's requirement, and the one in bold face type on the right side of the diagonal indicates the page number within the volume of THE JOURNAL.

At the Annual Meeting in Atlantic City in June the Board of Trustees directed that THE JOURNAL be sent to all dues-paying members of the Association, whereas formerly such members could choose to receive as a part of the benefit of membership either THE JOURNAL or one Specialty Journal. It is estimated that this new arrangement will increase the number of subscribers to THE JOURNAL by about 18,500.

A change has been made on the cover of THE JOURNAL under New and Nonofficial Drugs to list both the generic and trade names of drugs.

On December 15, 1958, Dr. Austin Smith, who had been Editor of THE JOURNAL for nine years, resigned and later accepted the presidency of the Pharmaceutical Manufacturers Association. Dr. Smith was succeeded by Dr. Johnson F. Hammond, who had been a member of THE JOURNAL staff for many years. Dr. Theodore Johnson, a medical practitioner in Ogden, Utah, joined the staff of THE JOURNAL, as an assistant editor, on June 1, 1959.

Medical Literature Abstracts.—About 2,600 articles have been abstracted by THE JOURNAL'S Current Medical Literature Department during the year, and 80 pages of abstracts as an average have been published each month. These are taken from about 80 different journals, both foreign and domestic.

Medical News.—The News Department published 1,847 news items, representing each of the 50 states of our country and many foreign countries. It also prepared for THE JOURNAL 3,411 obituary notices. The News Department now prepares the list of "Meetings" for THE JOURNAL as well as the list of "National Organizations of Medical Interest."

Questions and Answers.—Questions from 2,400 physicians were answered by replies from consultants or reference material from the Library. Of these questions and answers 614 were selected for publication in THE JOURNAL.

Medicine at Work.—Beginning with the October 11, 1958, issue of THE JOURNAL, when Medicine at Work was transformed from a single magazine-length feature article to a separate section of THE JOURNAL, the impact of this presentation has exceeded expectations. This material is read more widely now within the profession than at any time since Medicine at Work first began to attract readers in September, 1956. In August, 1958, for example, U. S. Senator Bricker introduced into the Congressional Record the full text of the 3,000 word Medicine at Work article entitled "World Medicine Comes of Age." *The Reader's Digest*, which published two previous Medicine at Work articles and quoted liberally from a third, is considering condensation of the alcoholism report "Robber of Five Million Brains" (J. A. M. A., July 19, 1958). That article has been republished in several medical and lay journals, including *Best Articles & Stories*. Several other reports from the section are listed as "required reading" in a number of medical schools.

In the past year Medicine at Work published a total of 156 reports gathered on a highly selective basis. There were 4[illegible] illustrations, including 13 taken by staff members. These reports dealt with mental health in industry, space medicine, research, snowstorms, aging, medical and health museums, medical education, etc. The report on the danger of plastic garment bags in the hands of children (J. A. M. A. April 25, 1959) created more immediate response from the profession and the public than did any other previous Medicine at Work product. The reaction to that story—extending to network television and radio, national magazines, and more than 2,000 newspapers—was such that *The Quill*, official publication of Sigma Delta Chi, professional journalistic fraternity, published a dramatic genesis of the plastic bags story and commented editorially on its impact in helping to save the lives of children.

In pursuing the objective of publishing, in highly readable form, only reports which portray medicine working with other disciplines to approach specific health situations, the two staff members attended more than 24 meetings of the A. M. A. and other organizations in Chicago and elsewhere. The primary aim continues to be accumulation of background knowledge and the cultivation of sources. In most cases manuscripts are previewed by these sources in person-to-person contact.

In the coming year there will be slight changes designed to improve layout and typography without radically departing from the previously established image. Also anticipated are several new format techniques to further enhance readability and interest.

A. M. A. Specialty Journals

A comparative study has been made with competing specialty publications, out of which have been developed recommendations for improving the A. M. A. Specialty Journals. Much attention has been devoted to new policy adopted by the Board of Trustees. This policy sharpens the focus on the purpose of each A. M. A. Specialty Journal and the service each should render within its field. It makes wider dissemination of published literature possible as benefit of membership. It increases the opportunity for greater numbers of A. M. A. members to serve in an editorial capacity. It makes it possible for a recognized specialized society to join with the A. M. A. in co-sponsoring a specialty journal whose purpose parallels that of the society. Such editorial co-sponsorship will identify the specialized society with the journal, will provide for society representation on the editorial board, and will acknowledge such representation to hold the same qualifications, responsibilities, and privileges as all A. M. A. representatives.

The regular schedule of the A. M. A. Specialty Journals was supplemented by the publication of two special reports as Part II of the monthly issue. One supplement appeared with the Archives of Ophthalmology and the other with the Journal of Diseases of Children.

Several regular issues were of special significance. All papers read on the 1958 program of the Section on Ophthalmology appeared in one issue of the Archives of Ophthalmology. Selected papers read on the 1958 program of the Section on Internal Medicine and the Section on Experimental Medicine and Therapeutics appeared in one issue of the Archives of Internal Medicine. An issue of the Archives of Pathology was dedicated to Dr. Shields Warren with contributions from his many colleagues and students.

The editorial boards of the A. M. A. Specialty Journals are rendering an important service in soliciting special reports, and in offering the pages of their journals to feature symposiums, conferences and panel discussions of particular significance.

The Journal of Diseases of Children cooperated with the Society of Pediatric Research by offering its editorial and production facilities in printing the abstract program for the Annual Meeting of the Society. These abstracts will be published with discussions in a future issue of the Journal of Diseases of Children.

Another important step was the division of the Archives of Neurology and Psychiatry into two journals. This division became effective with the July, 1959, issues with the introduction of the Archives of Neurology and the Archives of General Psychiatry.

Despite the rate of manuscript rejection, practically all A. M. A. Specialty Journals have an abundant supply of articles. Several journals have increased the number of text pages to accommodate quality articles, both solicited and voluntarily contributed. This situation attests to the high standard of quality attributed to these A. M. A. publications.

Library

Although the work of the Library especially has been handicapped by reconstruction operations on the headquarters building, the reference section processed 3,035 requests, 2,088 were answered by loaning package libraries, 822 of them requiring search of reference sources, and 125 requests were referred to other departments for reply.

Among the telephone requests during April only (aside from those which could be answered directly) were 197 which required a total of 34 hours to handle. Of these, 79 originated in other departments at headquarters; 22 came from other professional organizations, 25 from librarians, 21 from physicians, 10 from industrial concerns, 12 from publishing houses, 27 from laymen, and one from a lawyer.

Periodical loans totaled 8,646 of which 2,042 were house loans and 6,604 were sent outside the building. Of the latter, 2,655 were included in package libraries.

A survey of 8,940 periodical titles loaned in the past two years shows that 6,723 were English-language and 1,943 foreign-language journals. The Library does not loan A. M. A. publications, but 164 J. A. M. A. reprints were mailed in answer to requests.

There were 262 volumes added to the Library book collection and 83 withdrawn. This gain of 179 items brings the total collection to 4,500. On the basis of a four months' count, about 20,000 reprints, tear-sheets, etc., were processed for the Package Library files this year.

The Library prepared indexes for the three volumes of The Journal and listed 1,533 publications for the Books Received column. Fifty-four domestic and 100 foreign periodical titles not previously received reached the Library; sixty-three were new publications.

Two members of the Library staff presented papers at a workshop on medical writing during the American Medical Writers' Association annual meeting in September. The reference librarian attended the meeting of the Medical Library Association in June.

The Library is preparing a list of basic books and periodicals as a guide for librarians and physicians who serve on medical library committees. Only the final editing of this pamphlet remains to be completed.

While the aim of the library is to serve the members of the A. M. A. and the headquarters staff, it also helps other individuals and organizations who turn to the Association for information in the field of medicine.

Quarterly Cumulative Index Medicus

Volumes 59 and 60 of the Quarterly Cumulative Index Medicus were published and mailed to subscribers during the year. In the two volumes, 62,717 articles were indexed, for a total of 225,375 subject and author entries.

With the decision of the Board of Trustees to discontinue the Quarterly Cumulative Index Medicus, the work on publication of Volume 61 and subsequent volumes was halted. The more than one-half million cards that were in process have been assembled and will be available for reference work. Periods covered by the material in these files are January, 1957, through early 1959 for English-language journals and January, 1957, through June, 1958, for the foreign-language journals.

Every effort has been made to find employment for the twenty-seven members of the Index staff. Fifteen have been permanently relocated in other departments at A. M. A. headquarters; three are temporarily assigned; and three have transferred to other organizations in the city. Four left voluntarily, one to retire, one to be married, and two others because it was impossible to place them to their satisfaction.

Standard Nomenclature of Diseases and Operations

Progress in medical knowledge has been furthered by the use of the Standard Nomenclature of Diseases and Operations as a clinical disease index. The nomenclature is a most valuable tool in research. The many Standard Nomenclature committees have worked toward completion of the fifth edition of the Nomenclature, which is expected to go to the printer January 1, 1960.

After submission of the manuscript of the fifth edition, reappointment of consulting committees for the sixth edition will be made by the newly appointed Editorial Advisory Board.

About 6,000 inquiries have been answered by letter by the editors this past year. The Nomenclature is being used extensively in doctors' offices, medical clinics, pathology departments, and in many other places.

By the end of the present calendar year, 17 institutes on the Standard Nomenclature of Diseases and Operations will have been held in various sections of the United States. Enrollment has necessarily been limited to 125 students per institute, and at every institute the requests for enrollment have far exceeded that number. Nearly 1,900 students in all have been given concentrated courses on the Standard Nomenclature of Diseases and Operations. Institutes have been planned ahead through 1964.

The Standard Nomenclature Department presented an exhibit at the Annual Meeting of the American Medical Association in Atlantic City in June, 1959, and contemplated exhibits for the American Hospital Association in August, the Second World Conference on Medical Education in August, and the American Association of Medical Record Librarians in October, 1959. An invitation has been received for an exhibit at the meeting of the American Association of Anesthesiologists. A new exhibit on the Uses and Values of the Nomenclature has been completed and shown on one occasion.

In addition to the regularly sponsored educational program, the Nomenclature Department has participated in state educational programs in Kansas, Illinois, and Indiana.

A five-year proposed program of expansion of the Standard Nomenclature office briefly will cover:

(1) Details for the publication of the sixth edition; (2) future Standard Nomenclature institutes; (3) publications; (4) exhibits; (5) intra-office developments; (6) inter-office developments; (7) educational programs; (8) extra association activities.

A Handbook on the Standard Nomenclature of Diseases and Operations has been developed for senior medical students, interns, and residents. The major objective of this Handbook is to present in simple form the basic principles of terminology of the Standard Nomenclature of Diseases and Operations and a brief analysis of the Nomenclature to show that it can be adapted to conditions prevailing in the physician's private practice and hospital.

REPORT OF THE ECONOMIC RESEARCH DEPARTMENT

The Economic Research Department was initiated in January 1959. Its predecessor was known as the Bureau of Medical Economic Research and was under the direction of Frank G. Dickinson, Ph.D. until the end of December, 1958. Since the reporting year was thus evenly divided into two parts, it may be well to organize this report in two separate halves.

The Alesen Committee to Study A. M. A. Objectives and Basic Programs decided in June 1958 at San Francisco to have its next meeting in Chicago early in September in order to complete a report for the Minneapolis meeting in December, and to terminate the Committee's work. During most of July the Bureau edited and coded the returns to the Alesen Committee's questionnaire.

The hospital study, mentioned in previous annual reports, required the services of two research assistants for the entire year and that of a third until the end of October. Perhaps the most tangible result which has come from the study to date is the development with the office of the Standard Nomenclature of Diseases and Operations of a grouping of Standard Nomenclature codes into approximately 235 categories. This grouping, it is believed, will appear in the 1960, or fifth, edition of Standard Nomenclature. Some work on this particular project by the Bureau occurred during the latter half of 1958; much of the coding and editing had been completed by early summer of 1958.

Otherwise, the work of the Bureau in the remaining two to three months of 1958 was devoted to short publications, as miscellaneous publication M-116 entitled, *Medical Care Prices: Long Run Versus Short Run*. This is another in a series dealing with the latest Consumer Price Index data available from the Bureau of Labor Statistics. It continued the method of presenting data both in terms of the old base, 1935-1939, and the new base of 1947-1949. The format of this publication was a little different from that in the past and seemed to be more attractive. Its charts received many favorable comments and, on the whole, this publication, as others of its type, seems to have been well received by physicians and medical society executives who find the type of information the publication provides very helpful to them in presenting the economic position of medical care to the public.

Among other publications completed during this period was one entitled, *New Experiments to Provide Voluntary Health Insurance for Retired Persons* (Dr. Polner). This was printed as miscellaneous publication M-117, appearing in the fall of 1958. Before the end of the year a new subject index to the publications of the Bureau for the period 1947-1958 was completed. A review of *Readings in Medical Care* was completed early in December 1958 and was reprinted as miscellaneous publication M-119. During this period a short editorial on the decline in the baby boom was also written and an article on the cost of living was reprinted from the Chicago Daily Tribune. Research was also initiated on a study of the revised series of personal consumption expenditures. Some work was done on the problems of the aged and aging, on physicians' incomes, and on other fairly common queries concerning economic matters which frequently face the medical profession.

Dr. Dickinson's retirement became effective December 31, 1958. Dr. Kemp assumed the directorship of the Economic Research Department on January 1, 1959, and worked on a part-time basis during the six-month period, January to June 1959. From the time of his first visit it became eminently clear that the Economic Research Department would participate extensively in the Association's activities dealing with legislation of the Forand type.

By the end of January, the preliminary copy of the HEW report on Hospitalization Insurance for OASDI Beneficiaries was made available to the Department. A critical comment on this publication was prepared for Dr. Larson who presented it at a meeting in Washington. As soon as the revised version arrived in April a memorandum was prepared on it. On numerous occasions between January and June reference was made to Forand type legislation, to the HEW report and to the critical comments on these reports which the Department prepared.

The Department will work more closely with other agencies in the socioeconomic division and with other divisions and departments at headquarters than has been the case in the past. The Department's members have sought to service the other departments and divisions through attendance at meetings and by fulfilling requests for data, comments, or questions on the activities of these departments. They also have submitted memoranda raising questions about the long-term impact of some developments, notably those in health insurance.

Among the items produced by the Department during the first six months of 1959 was an article on *Personal Consumption Expenditures* (Dr. Martin), a comparison between the Commerce Department's new series and its old series, published as Bulletin 106. Another article entitled, *Critique of Some Statistics on Health Insurance Among the Aged* (Dr. Polner) directed attention to the fact that not all of the aged need and want health insurance and was reprinted as publication M-120. Both of these items had appeared earlier as articles in *The Journal of the American Medical Association*. The material cited above in the form of comments on the HEW reports also should be included among the tangible production of this Department in the first half of 1959. Book reports were also prepared for inclusion in J. A. M. A. during this time. A substantial number of memoranda additionally have been prepared dealing with the interest of insurance companies in relative value studies, a statement of the Department's position on relative value studies, a memorandum for the Law Department dealing with incomes of physicians and lawyers, and one on the relationship between economic progress and the desirable extent of certain types of benefit payments under voluntary health insurance. Additional memoranda were prepared with respect to the problem of impact of unions on hea [illegible] such as the Rockefeller [illegible] *coverage in New York state.*

Statistical information has been gathered for a number of other departments dealing often with the problem of setting forth and interpreting information on the indexes of the Bureau of Labor Statistics. Information has been tabulated additionally on paramedical personnel as well as on the distribution of employees by size of plant for various industries in our economy.

A notable development in the activities of the Department was its membership in the National Industrial Conference Board, which already has proved useful not only to the Department itself but to other departments at headquarters.

The Board in addition to its two monthly publications—"Business Record" and "Management Record," provides special studies such as "Company Medical and Health Programs," weekly items, and "help in a hurry" through which we can ask the Board's staff to do some immediate research for us. This subscription was designed as part of the development of a research program devoted largely to studies of the aged and aging and has resulted thus far in the preparation of several bibliographies and some progress on manuscripts on the financial resources of the aged. The Department also has prepared statements on over-all programs involving suggestions for political leaders to consider.

In the midst of these activities the hospital study has been placed on a secondary level of priority. Several steps have been taken to obtain some information from it at a minimum cost. A sample of the New England group has been drawn. This was a ten per cent sample and was found generally to be as informative and reliable as a one hundred per cent return would have been.

During this fiscal year two other articles, "Inter-Relationships of Patient, Physician, and Retirement" and "One More Pitfall in Diagnosing Patients" (Dr. Polner), were published in December 1958 and March 1959 respectively. Both were published in the *New Physician* and both were reprinted by the Department. A draft entitled, "Statistics of Studies of Utilization of the Short-Term General Hospital by Those Persons 65 Years of Age and Over: An Inquiring Note" (Dr. Polner) has been completed recently. An article already has reached draft form on the medical care price indexes for the year averages of 1958. It may prove to be one of the first publications of reporting year 1960. Drafts of an article also have been prepared on the financial resources of the aged.

With the conclusion of this interim period of reorganization, the Department's orientation is clearer than it was at the start of 1959. It would seem also that the Department has a clearer role than its predecessor in the headquarters' organization. The formation of an economic research committee with work to be done by outside scholars is one of the activities which we are expected to service in the future. In its closer work with other A. M. A. councils and committees, the Department is expected to operate primarily as a consultant, providing interpretive and analytical comments as well as observations on long run implications either orally or in written memoranda. With Dr. Kemp's arrival on a full-time basis and some increase and adjustment of staff, the Department can service other personnel and headquarters departments with increasing effectiveness.

REPORT OF THE DEPARTMENT OF HEALTH EDUCATION

Reorganization.—As a part of the administrative organization of the AMA, this Department has become a part of the Division of Socio-Economic Activities. The radio and television activities of the AMA, located in this Department since 1923, have been transferred to the Communications Division.

Personnel.—On February 1, 1959, the staff of the Department was augmented by the addition of Mrs. Patricia M. Chesley as pamphlet editor. Mrs. Chesley has a rich background of experience in editorial, journalistic, and public relations work.

Fitness of American Youth.—The House of Delegates passed a resolution at its June 1959 meeting supporting the President's Council on Youth Fitness and its work.

During the year covered by this report, the Director of the Department was reappointed to the President's Citizens Advisory Committee on the Fitness of American Youth for a third consecutive year, ending in 1960. He was also made a member of the Executive Committee of the Citizens Advisory Committee, and attended two meetings in connection with this membership.

Field Services.—More than 50 per cent of the time and a large percentage of the Department's budget are expended in services in the field.

The Department staff traveled 169,309 miles to attend meetings or address audiences in 27 states, the District of Columbia, and Copenhagen, Denmark. Audiences numbered 186 and totaled 24,552 persons.

The staff participated in 85 conferences and committee meetings.

It was necessary to decline 100 engagements.

The group reached in this service included medical societies, individual physicians, state health departments, universities, teacher education colleges, voluntary health agencies, youth-serving agencies, departments of the United States Government and of state and local governments other than health departments, women's clubs, civic clubs, chambers of commerce, youth groups, parent-teacher associations, mixed public health audiences, high school assemblies, health education workshops, inter-agency committees, and miscellaneous groups representing a broad cross-section of the American people, professional and lay.

The Department has one large and one small exhibit on fitness, and a large and a small exhibit on the health appraisal of the school child.

A new exhibit is in preparation on the subject of health and safety in athletics.

Correspondence.—Correspondence with doctors and cooperating agencies, 7,682; Question & Answer correspondence, 18,687.

The total number of letters handled was 34,051.

Manuscript pages of typed copy totaled 6,544.

Questions and Answers.—During the 12-month period ending June 30, 1959, a total of 18,687 letters were answered. The leading subject of interest was plastic surgery, which brought 6,947 requests for information and literature. This was stimulated by an article in consumer publications mentioning the Department as a source of information.

The second highest number of requests was for material on the human body; these totaled 1,419.

In third place were 1,248 requests for sex education materials.

The *Today's Health* column, "That's a Good Question," contained 99 articles, 85 prepared by the Department, 12 by the Council on Foods and Nutrition, and 2 by the American Dental Association.

Manuscripts, Book Reviews, Etc.—The staff reviewed 14 books for *The Journal of the American Medical Association* and prepared 85 contributions for *Today's Health* question and answer column, "That's a Good Question."

The Department staff originated 46 articles and 8 book reviews published in periodicals other than those of the American Medical Association.

Mutual Network Broadcasts.—The Director of the Department was invited in April 1959 to participate in a weekend program on the Mutual Broadcasting System, entitled "Inside Report." This program consisted of features dealing with various phases of current events, including health. Two broadcasts a week of five minutes each were prepared, recorded on tape, and broadcast. A total of 28 broadcasts were made.

Health and Fitness Unit.—The staff accepted invitations in 24 states, the District of Columbia and Canada to deliver 142 addresses, to take part in 59 conferences, institutes, annual meetings, and conventions of health education or other organizations, and to perform a variety of other services. The travel covered 109,890 miles.

The Seventh National Conference on Physicians and Schools, sponsored by the AMA, will be held October 13-15, 1959, at the Moraine-on-the-Lake Hotel, Highland Park, Illinois. It will be devoted to "Significant Issues in School Health and Physical Education," and will consider several important controversial issues.

These National Conferences have stimulated many state and local conferences of a similar nature covering school health. A survey started this spring will be presented to the Conference this fall.

One of the educational consultants (Hein) is now serving as staff secretary for the Association's Committee on the Medical Aspects of Sports (formerly the Committee on Injury in Sports).

The medical consultant (Dukelow) continues as an AMA appointee to the Joint Committee on Health Problems in Education of the National Education Association and the AMA, which has re-elected him secretary.

The Board of Trustees or the Executive Vice President has approved membership or participation in the activities of more than 40 national health agencies.

Pamphlet Production and General Printing.—Department of Health Education literature was exhibited and distributed at meetings, workshops, health days, career days, state and county fairs, and by schools, parent-teacher associations, medical societies, and health agencies, both on this continent and abroad. The sale of Department of Health Education publications by the Order Department totaled 526,291.

Excluding pamphlets, 72 printed items were handled by the pamphlet editor for the Department of Health Education. In addition, 877 letters and 378 telephone requests from individuals and organizations were answered during the period of this report.

REPORT OF THE WASHINGTON OFFICE

I. Reorganization

There has been a reorganization in the Washington Office with a new concept of operation. This office functions not as an independent unit, but as a division of the headquarters staff. The members of this staff represent the various divisions at headquarters and report directly to their divisional directors under whom their programs operate. The objective is to facilitate integration of the activities in Washington with similar activities in Chicago.

The various divisional activities are coordinated by the Manager in a teamwork effort. He reports directly to the Executive Vice President and is responsible for carrying out directives as well as reporting significant events on the Washington scene.

DEPARTMENTS

The Washington Office executive staff, whose functions represent the extension geographically of the various divisions, is as follows:

Communications Division.—Mr. Ted Lewis and Mr. Dayton Moore have responsibilities playing a vital role on the editorial and news media activities. Their duties are to maintain liaison with the Washington news media corps, providing information concerning AMA policies and activities. They also serve as associate editors for the *AMA News* and *JAMA*.

Law Division.—Mr. Paul Donelan, legal adviser, analyzes bills of medical interest and prepares legislative analyses for review by the Law Division and the Council on Legislative Activities. He surveys daily the *Congressional Record* and notifies all concerned of matters of significant interest.

Socio-Economic Division.—Dr. Otis Anderson, medical liaison representative, maintains contact with significant medical posts throughout governmental agencies. In addition, he services the many councils and committees whose programs are related to the various departments of government.

Field Division.—Three legislative liaison representatives—Messrs. Cecil Dickson, James Foristel, and Harold Slater—are registered as lobbyists with the primary assignment of liaison with members of Congress. They are in constant contact with the Field Division Director and the four field representatives on legislative developments.

Administrative Division.—The Manager, Dr. Roy Lester, answers directly to the Executive Vice President, similar in manner to the other divisions, and is responsible for representing the Executive Vice President in Washington and for the coordination of the diverse activities of this office.

Mr. Paul Grieder is administrative assistant and has as his primary duties personnel administration and bookkeeping.

INTEROFFICE COMMUNICATIONS

The goal is to have the Washington Office staff become a vital part of the overall AMA staff and an important segment of the team whose responsibility it is to implement and make effective the total AMA program and objectives. This is being accomplished by an increased communications effort. Twice weekly, conference telephone calls are held with the headquarters staff. Daily written reports are submitted when indicated. The teletype machine connecting the two offices is used repeatedly as matters of an urgent nature develop. The Manager keeps informed of headquarters activities by attending Division Directors' meetings in Chicago and in turn relays this information to the Washington executive staff. The general staff meetings at headquarters are attended monthly by two members from Washington on a rotating basis.

PUBLICATIONS

This office has ceased all publication activities, the function being transferred to the Chicago Office. The material contained in the *AMA Washington Letter* is now incorporated in the *AMA News*. The data formerly appearing in the *Legislative Analysis* is currently presented in the Law Division's publication, *Medical Legislative Digest*.

CONCLUSION

The reorganization was instituted in January 1959. After this brief period under the present setup, indications are that an efficient and effective team is forming. Minor changes will be made as experience and time indicate.

II. Delegations of Physicians Visiting Members of Congress

During the first session of the 86th Congress, fourteen delegations of physicians visited their members of Congress. Six State medical groups arranged for either a breakfast, luncheon, or dinner meeting which members of Congress attended. In each of these cases the Washington Office representatives made arrangements for the meetings and attended as guests.

In most cases the State delegations were made up of at least one physician from each Congressional district. Discussions were frank and fruitful, dealing with the chief legislative problems confronting organized medicine. On eight other occasions, a small group of physicians called on all or a major percentage of the members of Congress from their States.

REPORT OF THE JUDICIAL COUNCIL

Since its last annual report was submitted the Judicial Council has held four regular meetings. It has considered no appeals. The major activity of the Council during the past year was the review of the legal status of, and the policy statements of the House of Delegates regarding osteopathy.

Osteopathy

In its Special Report to the House of Delegates at its June, 1959, meeting the Judicial Council recommended:

> "(1) The principle be reaffirmed that all voluntary professional association between doctors of medicine and those who do not practice a system of healing based on scientific principles is unethical.

"(2) It shall not be considered contrary to the Principles of Medical Ethics for members of the American Medical Association voluntarily to associate professionally with physicians, other than doctors of medicine, who are licensed to practice the healing art without limitation and who base their practice on the same scientific principles as those adhered to by members of the American Medical Association, and that

"(3) It shall not be considered contrary to the Principles of Medical Ethics for members of the American Medical Association to teach students of osteopathic medicine who seek to develop and improve their knowledge of the science of medicine and thereby to improve their ability to provide a better quality of medical care."

After consideration of these recommendations by the Reference Committee, which modified them to some extent, the House after debate adopted the following principles regarding relationships between doctors of medicine and osteopaths:

"(A) All voluntary professional associations between doctors of medicine and those who practice a system of healing not based on scientific principles are unethical.

"(B) Enactment of medical practice acts requiring all who practice as physicians and surgeons to meet the same qualifications, take the same examinations and graduate from schools approved by the same agency should be encouraged by the constituent associations.

"(C) It shall not be considered contrary to the Principles of Medical Ethics for doctors of medicine to teach students in an osteopathic college which is in the process of being converted into an approved medical school under the supervision of the A. M. A. Council on Medical Education and Hospitals.

"(D) A liaison committee be appointed by the Board of Trustees of the American Medical Association to meet with representatives of the American Osteopathic Association, if mutually agreeable, to consider problems of common concern including inter-professional relationships on a national level."

The Council concluded that the only changes effected by the action are: (a) doctors of medicine may now ethically teach in an osteopathic college which is in the process of being converted into a medical school under the auspices of the Council on Medical Education and Hospitals; and (b) the Board of Trustees may appoint a liaison committee to meet with a similar committee of the American Osteopathic Association to consider problems of common concern including interprofessional relationships at a national level.

Ownership of Pharmacies

As members of the House of Delegates know the Principles of Medical Ethics, as recently as June, 1954, contained the statement "an ethical physician does not engage in barter or trade in the appliances, devices or remedies prescribed for patients, but limits the sources of his professional income to professional services rendered the patient."

In June, 1954 the Principles of Medical Ethics were revised to provide in this regard: "It is unethical for a physician to participate in the ownership of a drugstore in his medical practice area unless adequate drugstore facilities are otherwise unavailable. . ."

In June, 1955 the Principles of Medical Ethics were revised again to provide "it is not unethical for a physician to prescribe or supply drugs, remedies or appliances as long as there is no exploitation of the patient."

At the June, 1957 annual session of the Association the present Principles of Medical Ethics were adopted. Section 7 of the Principles provides, "drugs, remedies or appliances may be dispensed or supplied by the physician provided it is in the best interest of the patient."

In opinions published in The Journal the Judicial Council, interpreting this Principle of Medical Ethics, expressed the opinion that the physician as a citizen has the right to make investments according to his own best judgment; that the fact that he is a physician should not preclude him from investing in the stock of a pharmaceutical company, provided, of course, that no subterfuge is employed and no unusual control of the company is exercised by the doctor. The Council also expressed the opinion that it is not, in itself, unethical for physicians to own pharmacies; provided there is no exploitation of the patient.

In November, 1958, the Council interpreted Section 7 of the Principles as it relates to dispensing and supplying drugs, remedies or appliances by saying: "It is known that there will be situations when it is necessary or desirable for a physician to dispense or supply what he has prescribed. The Principles permit this to be done . . . In essence this language [of Section 7] means that a physician in the exercise of sound discretion may dispense 'in the best interest of his patient'; it does not authorize him to dispense solely for his convenience or for the purpose of supplementing his income."

The Council has received many letters which indicate physicians in many communities are forming corporations to package and sell standard medicines under the corporation's name. It appears that the physician stockholders of these small, independent corporations write prescriptions for medicines of the brand or name used by their corporation.

The Council has received letters protesting against the ownership of pharmacies by physicians. The Council repeats it is not *in and of itself* unethical for physicians to own pharmacies or to hold stock in pharmaceutical companies. It is, however, the definite opinion of the members of the Judicial Council that the ownership of a pharmacy or the ownership of stock or financial interest in a pharmaceutical company can, under certain conditions, become unethical and contrary to the best interest of the public and the medical profession.

Because of the nature of these practices and because they can vary so greatly, the Council has insisted that it is the obligation of the local medical society to insure that no one of its members violates the high ethical traditions of the medical profession. It is the obligation of the county medical society to investigate complaints against its members and to take appropriate action, when indicated, to protect both the public and the profession.

Medical Disciplinary Committee

The Judicial Council is pleased to note that the Board of Trustees has appointed the Medical Disciplinary Committee. The Council hopes that each member of this Association, the constituent and component societies and all staff members of medical societies will co-operate, to the fullest extent, with this Committee. The Medical Disciplinary Committee is conducting a survey to ascertain whether or not adequate disciplinary procedures exist and whether the procedures are being used. From this survey the Committee hopes to formulate recommendations which will assist medical societies in the fulfillment of one of their basic obligations to society.

Respectfully submitted,
L. A. Buie, M.D.

Edwin J. Holman, *Secretary*

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

This report covers the period July 1, 1958, through June 30, 1959. It includes reference to amendments made to the Constitution and Bylaws by the House of Delegates during this period, amendments now pending before the House of Delegates and general comments relative to future activities of the Council.

Amendments to the Constitution.—No changes were made in the Constitution although two suggested changes were considered. One, relating to "Successor To The Presidency," is discussed later in the report. The other was a suggestion that the Council consider amending the stated objects of the Association to include a statement regarding socio-economic conditions to facilitate promoting the art and science of medicine and the betterment of the public health. In a Special Report to the House of Delegates in June, 1959, the Council recommended that such an amendment not be adopted. The recommendation of the Council was approved by the House of Delegates.

Amendments to the Bylaws.—(1) *Dues Exemption for Resident Physicians.*—Recognizing the fact that many physicians take residency training after they have been out of medical school more than five years, Chapter III, Section 4(C) was amended so as to include dues exemption for "Interns and residents serving in training programs approved by the Council on Medical Education and Hospitals of the American Medical Association." The five-year limitation, formerly imposed, was removed.

(2) *AMA News, Today's Health, Specialty Journals.*—The Board of Trustees suggested that the AMA News and Today's Health should be provided to all dues-paying members of the Association as a benefit of membership. It was also suggested that each member be entitled to select one of the Specialty Journals in addition to THE JOURNAL of the A. M. A. as a membership benefit. The House of Delegates concurred in these suggestions and amended Chapter III, Section 3, to read "Membership dues will include subscriptions to THE JOURNAL of the American Medical Association, the AMA News, Today's Health and any one of the A. M. A. Specialty Journals of the member's choice."

(3) *Introduction of Resolutions and New Business at AMA Meetings.*—The House approved a suggestion of the Speaker that Resolutions must be in his hands or in the AMA headquarters office by noon of the day before the opening meeting of a session; otherwise they will be considered as emergency matters. To accomplish these ends, and to increase the quorum of the House from fifty to seventy-five, the following changes were made in Chapter IX, Section 2:

> "(C) Introduction of Resolutions.—To be considered as regular business, resolutions must be in the hands of the Speaker or submitted to the Headquarters Office of the Association not later than noon of the day before the opening meeting of a session of the House of Delegates.
>
> "(D) New Business: Resolutions.—Resolutions presented later than noon of the day before the opening meeting of a session of the House will be referred for consideration by the House only when they are:
> (1) Presented by one of the Sections, or
> (2) Presented by the Board of Trustees, or
> (3) Accepted by unanimous consent, or
> (4) Of an emergency nature.
>
> "(E) New Business: Other.—New Business, other than Resolutions, not presented in the regular order of business as set forth in Chapter IX, Section 2(A), will be referred for consideration by the House as new business if received by the Speaker by 9 a.m. of the last day of any meeting. To be accepted for referral to the House on the last day, however, such New Business must be.
> (1) Presented by one of the Sections, or
> (2) Presented by the Board of Trustees, or
> (3) Accepted by unanimous consent, or
> (4) Of an emergency nature.
>
> "(F) Procedure.—When the Speaker receives any Resolution pursuant to Section 2(D) or any other New Business, for introduction on the last day, pursuant to Section 2(E) he shall, unless it is introduced from a Section, the Board of Trustees or by unanimous consent, refer it to the appropriate Reference Committee, which shall then report to the House as to whether the matter involved is or is not of an emergency nature. If the Reference Committee reports that the matter is of an emergency nature, the matter shall be presented to the House. Matters thus presented may be acted upon by the House without further reference to Committees. Favorable action shall require the affirmative vote of three-fourths of all delegates present and voting. If the Committee reports that the matter is not of an emergency nature, the Speaker shall defer its introduction until the next session of the House.
>
> "(G) Quorum.—Seventy-five of the voting members of the House of Delegates shall constitute a quorum."

(4) *Rules of the Board of Trustees.*—To assist the Board of Trustees in revising its Rules of Procedure, and at its request, the House adopted the following changes in Chapter XVI:

"Section 2.—Organization

"(A) Immediately following the conclusion of the Annual Session, the Board shall organize by electing a chairman, vice-chairman, secretary, and committees necessary to its needs.

"(B) The Board of Trustees at its organization meeting, by resolution adopted by a majority of the Trustees in office, may designate three or more Trustees to constitute an executive committee. Members of the committee shall serve until the next organization meeting of the Board and until their successors are elected and qualified. The executive committee shall have such powers and duties as may be defined from time to time by resolution of the Board of Trustees.

"Section 3.—Meetings

"(A) There shall be at least four regular meetings of the Board of Trustees each calendar year to be held at such time and place as the Board shall determine. Notice of each regular meeting shall be given at least ten days before each such meeting.

"(B) Special Meetings may be called at any time by the chairman or at the request of five members of the Board. Notice shall be given at least five days before each such meeting. The notice shall specify the general purposes of and business to be transacted at the meeting, but other business may also be transacted.

"(C) Six Trustees shall constitute a quorum.

"Section 5.—Notice

Notice is given if delivered in person, by telephone, mail, or telegram; if mailed, such notice shall be deemed to be delivered when deposited in the United States mail, addressed to a Trustee (and other persons entitled to notice) at his address then appearing on the records of the Association, with postage prepaid, and if given by telegraph, shall be deemed delivered when the telegram is delivered to the telegraph company.

"Section 6.—Waiver of Notice

Notice of any meeting and the object or business to be transacted at a meeting of the Board need not be given if waived in writing, or by telegraph, cable, or wireless before, during, or after such meeting. Attendance at any meeting shall constitute a waiver of notice of such meeting except where attendance is for the express purpose of objecting to the transacting of any business because the meeting is not lawfully called or convened."

(5) *Filling of Certain Vacancies by Board of Trustees.*—At the request of the Board, the Council restudied the question of whether or not the duty of the Board to fill certain vacancies in councils and general offices, until the next annual session, should be mandatory or permissive. After concluding that such duty should be mandatory and that it should extend to the Speaker and Vice-Speaker, as well as to those offices previously covered, the Council recommended, and the House approved, an amendment to Chapter XVI, Section 4(I) to read as follows:

> "(I) Fill any vacancy in any council or in any general office of the Association, except that of President or President-Elect, by appointment until the next annual session of the House, at which time the House shall elect an eligible person for the unexpired portion of the term, unless otherwise provided for in the Constitution and Bylaws."

Amendments pending before the House of Delegates.—The Council recognized the existence of an inconsistancy in the provisions of Article VII, Section 5 of the Constitution relating to Successor to the President. In order to clarify the meaning of this Section, the Council recommended an amendment to read as follows:

> "If the President dies, resigns or is removed from office, the President-Elect shall immediately become President and shall serve for the remainder of the term of his immediate predecessor. If the time served is less than six months, he shall also serve as President until the second annual session following his election as President-Elect. If a President-Elect succeeds to the Presidency six months or more before the following annual session, the House of Delegates at the following annual session shall elect another eligible person to serve as President until the next annual session. If the President-Elect dies, resigns or is removed from office, the office of President-Elect shall remain vacant and at the next annual session, the House of Delegates shall elect an eligible person to serve as President until the next annual session. If there is a vacancy in the offices of both President and President-Elect, the Vice President shall act as President until the next annual session, at which time the House of Delegates shall elect an eligible person to serve as President until the following annual session."

Since this was a proposal to amend the Constitution, it had to lay over for one session of the House. It is therefore before the 1959 Clinical Session for final action.

Future activities.—As the House knows, this Council is a fact-finding and advisory committee. As such, its deliberations consist of more than the mere selection of words to express the intent of an amendment already approved by the House. The Council therefore wishes to mention a few of the matters which it expects to consider during the coming year:

(1) When the section relating to the Successor to the President was being studied, it was noted that reference was made to removal from office of the President or the President-Elect but that the grounds or procedure for such removal are not stated. The Council will endeavor to determine whether or not provisions relating to this problem should be included in the Constitution or Bylaws and what form they should take.

(2) It has been suggested that some changes are needed with respect to the eligibility requirements for registration at the Scientific Assembly. A study of this problem will be made.

(3) As the Constitution now stands, a President-Elect who succeeds to the Presidency six months or more prior to the next annual session is not eligible for election as President at that next annual session. Should this provision be changed?

(4) Should affiliate members be selected by the Judicial Council without referral of the selections to the House of Delegates? In fact, should the requirements for affiliate membership be enlarged to include certain reputable physicians not now eligible for membership under any other classification?

These are examples of the important issues which the Council must determine. The Council will welcome an expression of opinion on any of them from any member of the Association.

Council Membership.—Dr. William Hyland was re-elected by the House of Delegates in June, 1959, as a member of the Council for another five years term.

Respectfully submitted,

B. E. Pickett, Sr., M.D., Chairman
William D. Stovall, M.D.,
Vice Chairman
William Hyland, M.D.
Walter E. Vest, M.D.
Walter C. Bornmeier, M.D.
George E. Hall, Secretary

REPORT OF THE COUNCIL ON MEDICAL EDUCATION AND HOSPITALS

To the Members of the House of Delegates of the American Medical Association:

The Council on Medical Education and Hospitals submits the following report covering the period from July 1, 1958, to June 30, 1959.

During the period covered by this report, the Council on Medical Education and Hospitals has concerned itself with the various matters referred to it by the House of Delegates and with the many activities and responsibilities which are related to its established functions. These functions are in one manner or another directed in support of the Council's over-riding responsibility for the development and maintenance of high standards of medical education at the level of medical schools, internships and residencies and continuation education as well as in the various paramedical fields.

The Significance of Approval of Educational Programs by the Council on Medical Education and Hospitals

Because of indications that the Council's accreditation program may on occasion be subjected to misunderstanding in relationship to other established policies and attitudes of the American Medical Association, the following statement was developed in cooperation with the Law Department and approved by the Council on Medical Education and Hospitals on February 7, 1959:

> The basic responsibility of the Council on Medical Education and Hospitals is to act on behalf of the American Medical Association in developing and maintaining the highest possible standards of medical education. Programs at all levels of medical education—medical school, internship and residency—are evaluated on the basis of their educational worth to the students concerned. Decisions concerning the programs are not compromised by other considerations.
>
> The Council's approval of a program signifies only that the Council believes that the program offers a sound educational opportunity for the purposes which the program is designed to fulfill. Council approval of a program should not and cannot be interpreted to indicate attitudes or opinions of the Council, its individual members or the Association of which it is a part in favor of or opposed to social, economic, political or other beliefs of the organization or institution sponsoring the program.

Costs of Medical Research Grants

There have been many studies which, in general, have indicated that about 35% of total medical research expenditures by medical schools represent indirect costs to the medical school. Under existing policies, medical research grants sponsored by the federal government allow only 15% of the grant to be applied for reimbursement of indirect costs. In 1958, HEW and NIH research grants to medical schools amounted to $48 million. Through the incomplete reimbursement for indirect cost during that year the medical schools subsidized federally sponsored research for approximately $7 million.

In consideration of these and other serious implications, the Council submitted to the Board of Trustees and the Board of Trustees adopted the following statement:

Sponsored Medical Research

Medical progress has resulted in the cure and prevention of many diseases and an increase in the years of productive living for millions of individuals. This progress has been based largely on new knowledge discovered through medical research and applied through medical practice. There remains much to be learned in the understanding of normal and abnormal biological processes necessary to produce further improvement in physical and emotional health.

An expanding, increasingly health conscious population has created a need for an accelerated pace of medical research. This has resulted in increased medical school research, most of which is now sponsored by the federal government, voluntary health agencies, and philanthropic organizations.

These expanded research activities have increased our medical knowledge, and the opportunity to train young medical scientists for future research and teaching careers.

These activities, however, have necessitated enlarged supporting staffs and diversion of medical school funds to assist the responsible investigators. Administrative personnel have been added to take care of larger physical plants, to purchase and maintain scientific equipment, to obtain research materials, and to assist with the required accounting procedures and fiscal and scientific reports.

These and other necessary adjustments by medical schools to the greatly increased volume of sponsored research have diverted funds urgently needed for the medical schools' teaching functions into support of research activities sponsored by outside agencies. This will have an increasingly deleterious effect on the medical schools' obligation to prepare physicians for careers in the practice of medicine.

The Board of Trustees of the AMA feels that as a matter of principle medical schools should not be placed in the position of partially subsidizing research programs sponsored by extramural agencies. Furthermore, it is believed that the financial drain resulting from continuation of present medical school financial commitments for this purpose will handicap their teaching responsibilities and lead to a loss of physicians adequately trained for medical practice.

It is urged, therefore, that all agencies sponsoring research in medical schools adopt the policy of fully reimbursing the medical school on a cost accounting basis for all expenditures related to the sponsored research project. This policy is characteristic of most other research grants in scientific and related fields.

We wish to emphasize that this statement does not represent a request for subsidy of medical schools. It is simply an endorsement of the principle that sponsoring agencies should remunerate medical schools in full for the research projects they sponsor.

In the instance of grants from federal sources, implementation of this policy could be accomplished by the federal government through reallocating of funds without an increase in the total funds appropriated for medical research.

Medical Scholarship and/or Loan Funds

The Council submitted to the Board of Trustees at the June 1959 meeting, the following statement:

> The Council on Medical Education and Hospitals wishes to report to the Board of Trustees its concern that well qualified students may be deterred from entering medical school because of financial considerations. The Council recommends to the Board that it initiate action directed toward a study:
>
> 1) Documenting any need such as may exist for the establishment of a medical scholarship and/or loan program sponsored by the American Medical Association.
>
> 2) The method of selecting recipients of such scholarships and/or loans on the basis of financial need and demonstrated scholarly and personal qualifications; and
>
> 3) The means of administering an AMA sponsored medical scholarship and/or loan program by which such needs as may exist can be most equitably met to assure that financial considerations do not unduly deter well qualified and highly motivated students from entering the study of medicine.

After consideration, the Board of Trustees transmitted (as Letter M, Supplementary Report of Board of Trustees) this statement to the House of Delegates with a recommendation for its adoption. The Reference Committee on Reports of the Board of Trustees recommended that a thorough investigation of this problem should be very informative and recommends that the Board of Trustees be requested to initiate such a study. This was adopted by the House of Delegates.

Matters Referred to the Council by the House of Delegates

Resolution #10 (June 1959) and Resolution #11 (Dec. 1958) either directly or by implication reaffirm a previously established policy (Resolution #60, June, 1957) of opposition to the payment of interns and residents for medical services rendered by the interns or residents. In recommending approval of the intent of these resolutions (#10, 1959; #11, 1958), the reference committees noted that this is a matter of present study of the Council on Medical Education and Hospitals (and through the Liaison Committee on Medical Education in conjunction with the Association of American Medical Colleges) and the Council on Medical Service. In compliance with the recommendations of the reference committees as approved by the House of Delegates, this matter continues to receive the careful attention of the Council.

In recommending that Resolution #21 (June 1959) on the "Council on Medical Education and Hospitals" not be approved, the Reference Committee called to the attention of the Council the importance of:

1. Maintaining continuing concern that its activities in regard to internship programs be promptly taken.
2. Informing hospitals involved promptly of the reasons for any unfavorable actions, and
3. Dissemination of information concerning the mechanism by which such unfavorable actions can be reversed without internship programs being deleted from the published list of approved programs.

In regard to the above, the Council and staff have studied their activities related to surveying, reporting and reviewing procedures so that the total accrediting process of internship programs will be accomplished in the least possible time. A new policy has been established whereby each hospital will receive a letter promptly following the program survey and review which will enumerate the deficiencies found prior to action on the program by the Internship Review Committee. This new policy will allow for clarification of any matters in question, and for the hospital to take such corrective measures as are possible. Such corrective measures will be taken into account by the Internship Review Committee at the time of its action. When unfavorable action is taken in regard to an internship program, the date of the action is such that under usual circumstances the hospital will have ample opportunity to make such modifications in its program as are necessary for reinstatement of approval prior to the date on which the internship program would be deleted from the list of approved programs. This entire procedure will be carefully documented in the forthcoming Internship and Residency Number of The Journal which is scheduled for publication in October, 1959. In addition, it is anticipated that a separate information sheet on these policies and procedures will be enclosed with every letter of adverse action or disapproval which goes to a hospital in the future.

Annual Reports of the Council

The organization of the Council on Medical Education and Hospitals in 1904 included the responsibility of making an annual report on the existing conditions of medical education in the United States. This responsibility was accomplished during the year through preparation of material for special issues of The Journal on the following subject matter:

Selected Papers from the Annual Congress on Medical Education and Licensure held February 8-9, 1959, May 16 and 23, 1959.

Medical Licensure Statistics (1958), May 30, 1959.

Postgraduate Courses for Physicians, August 15, 1959 (covering the period September 1, 1959 to August 31, 1960).

Directory and Annual Report of Approved Internships and Residencies, October 10, 1959.

Medical Education in the United States and Canada, November 15, 1959.

The presentation of these annual reports is an important aspect of the activities of the Council staff and necessitates constant awareness of changes and close cooperation with associated groups and organizations.

Medical School Accreditation Studies and Accreditation

In liaison with the Association of American Medical Colleges and where Canadian medical schools were visited in liaison with the Association of Canadian Medical Colleges, the following institutions were surveyed by representatives of the Council on Medical Education and Hospitals during the academic year 1958-1959:

University of Chicago School of Medicine
University of Michigan School of Medicine
University of Ottawa Faculty of Medicine
Jefferson Medical College
Yale University School of Medicine
Vanderbilt University School of Medicine
Bowman Gray School of Medicine
University of Colorado School of Medicine
Columbia University College of Physicians and Surgeons
Stritch School of Medicine of Loyola University
Albert Einstein College of Medicine
University of Kansas School of Medicine
Washington University School of Medicine
Creighton University School of Medicine

In accordance with established policy, liaison studies are now made of newly developing medical schools several times during the devolopment period. Albert Einstein College of Medicine had all four years of the course in operation during the last academic year and was granted full approval upon visitation. Seton Hall College of Medicine and the University of Florida had the third year of their program in effect and will be eligible for consideration for full approval during the academic year 1959-1960.

The schedule for liaison survey visits for the coming academic year (1959-1960) includes the following institutions:

University of Alberta Faculty of Medicine
University of Western Ontario Faculty of Medicine
St. Louis University School of Medicine
Marquette University School of Medicine
University of Rochester School of Medicine and Dentistry
Seton Hall College of Medicine
Baylor University College of Medicine
University of Puerto Rico School of Medicine
University of Florida School of Medicine
University of Cincinnati College of Medicine
University of Mississippi School of Medicine
New York University College of Medicine
State University of Iowa College of Medicine
Dartmouth Medical School
Georgetown University School of Medicine

Potential Sites for New Medical Schools

The staff has made every effort to keep the Council informed regarding the potential development of new medical schools. Among the most significant recent developments are the following.

In a recent session the legislature of the state of Texas authorized the establishment of a new four-year medical school in San Antonio. The new school will be a part of the University of Texas which is presently engaged in studies directed toward determination of the most appropriate location for the new institution. Although the school will be an integral part of the University, the legislature indicated that the community of San Antonio will be expected to provide the necessary clinical facilities.

With construction of a new basic science building in Indianapolis, the first year teaching program was moved from the main University Campus in Bloomington to Indianapolis. Beginning in September, 1959, the University of Indiana will initiate a new program in medical education utilizing the vacated facilities on the Bloomington campus as well as the teaching facilities of other departments of the University. This new venture is designed to permit carefully selected students to complete the first two years of medical study while at the same time continuing work in an academic field through the baccalaureate and masters degrees.

There are other groups and institutions that have indicated varying degrees of interest and activity directed toward the development of additional medical schools. The incidence and timing of actual future establishment of new schools cannot be predicted.

The Council on Medical Education and Hospitals in collaboration with the Association of American Medical Colleges makes every effort to be of as much assistance as possible to those groups and institutions which contemplate development of new schools of medicine. Initial arrangements are now being made for consultative visits to St. Paul, Minnesota and Albuquerque, New Mexico (University of New Mexico) in regard to the possible establishment of new educational facilities at those sites.

Graduate Medical Education

The Council's responsibility in the field of graduate medical education pertains largely to internship and residency training programs. These responsibilities are discharged through four major activities:

(1) Evaluation of graduate training programs through the hospital survey visits of a staff of field representatives now totaling eight physicians, submission of these reports to 18 different internship and residency review committees, and to two American specialty boards for which review committees do not exist.

(2) Dissemination of information on programs and policy through individual letters and personal contacts, periodic notices in THE JOURNAL, and the publication annually of the Directory of Approved Internships and Residencies in the Internship and Residency number of THE JOURNAL.

(3) Collaboration and liaison with non-AMA groups representing hospitals, medical schools, specialty boards, national foundations and voluntary organizations, federal services, and others.

(4) Analysis of present status and projections of future trends through continued revision of questionnaires and progressive adaptation of accumulated data to machine records processing.

Internship.—The Essentials of an Approved Internship was revised as of June, 1958. The rotating internship continues to be the most popular type, and there is a growing tendency for hospitals to combine their resources and facilities in the support of single programs stronger than would be possible if operated separately. The Council staff is studying the effectiveness, from the standpoint of both the individual intern and the hospital, of any program with an intern complement of less than six physicians. A small number of hospitals now have approved internship programs with quotas as low as two interns.

National Intern Matching Program.—For the year July 1, 1959 to June 30, 1960, American Medical Association representatives elected to the Board of Directors were Dr. Walter S. Wiggins, Dr. Willard V. Thompson, and Dr. John C. Nunemaker. Dr. Nunemaker was elected by the Board to serve as a member of the executive committee as treasurer for the same period.

The results of the Eighth Annual National Intern Matching Program were published in March, 1959 and showed that there were 12,250 internships to be filled through the plan and 6,478 students matched in the plan. Internships unfilled through the matching plan were therefore 5,772. The number of foreign graduates participating in the matching program for 1959 was sharply reduced because of the requirement for certification by the Educational Council for Foreign Medical Graduates, and as a consequence the total number of interns matched is less than for the previous year. After this year, it is expected the number of participating foreign graduates will again be increased. The full report for the Seventh National Intern Matching Program for the year 1958 was published in The Journal of Medical Education in January, 1959. Extensive studies on the significance of the results shows that the quota saturation percentage for the affiliated hospitals has been increasing and is more favorable than that for the unaffiliated. It further showed that those hospitals with intern quotas of 20 or more are experiencing a much higher quota saturation than those with less. In addition, while more hospitals are offering higher stipends, the increasing high quota saturation for the low as compared with the high stipend hospitals shows that increasing numbers of graduates are attracted to an internship by factors other than stipend.

Educational Council for Foreign Medical Graduates

Although the Council has no direct official relationship to the Educational Council for Foreign Medical Graduates, because of the importance of the activities of this new organization to the Council's work, the staff renders every possible consultative assistance and keeps fully informed of the program of the Educational Council for Foreign Medical Graduates. Given below is certain of the current most pertinent information.

The next examinations for certification by the Educational Council for Foreign Medical Graduates are scheduled for March 16, 1960 and September 21, 1960. Examination centers have now been established at 31 locations in the United States, one in Canada, one in Hawaii, and one in Puerto Rico. Fifty-two foreign centers have been established, and continuing efforts are being made to increase the centers in foreign countries. A temporary certificate is now granted to those foreign graduates who come within five points of attaining a passing grade. This temporary certificate entitles the individual to spend two years as an American intern or resident, at the end of which time if he has not retaken the examination successfully he must return to his native land. July 1, 1960 is the date on which the sponsoring agencies expect all foreign medical graduates on United States hospital staffs will have been certified either with the standard or temporary certificate.

Annual Questionnaire.—At the suggestion of the Council, the annual questionnaire on foreign interns and residents issued by the Institute for International Education will be included with the annual questionnaire of the Council in the hope that 100% returns can be obtained. Furthermore, the census blank used by the Institute for International Education will contain space for recording the Educational Council for Medical Graduates status of each foreign medical graduate reported in the census. In addition, it is hoped that the census reports will indicate the number of foreign medical graduates serving in this country in graduate training positions other than internships and residencies.

Hospital Survey Program

The hospital survey program of the Council on Medicical Education and Hospitals deals entirely with the survey and evaluation of internships and residencies and their subsequent status. There are currently five full time and three part time physicians serving as field staff representatives to carry out this aspect of the Council's activities. They are carefully selected on the basis of their interest, knowledge, and experience in the field of medical education, and their ability to represent the Council with firmness, tact and diplomacy. It is pointed out that this group of physicians are not a policing body in any sense of the word. Their function is to act as consultants regarding intern and resident training programs, helping hospital administrators and medical staffs to analyze and understand their problems, and assisting them toward interpretation of the standards of graduate medical training. The responsibility for reviewing programs of intern and resident training is a very important one, and requires an intelligent and constructive approach. The approval program of the Council depends to a large extent on the efficiency and effectiveness with which its representatives carry out their obligations. The accompanying table presents a comparative analysis of the survey activities of the field staff during the past three years. The activities of the field staff for the period July 1, 1958 through June 30, 1959 were less than for the two previous years due to the fact that the Council's field staff was not operating at full strength. The augmentation of three part time represenatives and an appointment made during the year to fill a vacancy will enable the Council to continue its past performances.

	1957	1958	1959
Total Hospitals Visited	793	915	775
Internships Reviewed	288	421	298
Residencies Reviewed	1,922	2,168	1,759
Total Programs Reviewed	2,210	2,589	2,057

Status of Residencies in General Surgery of Less Than Three Years' Duration

The Council has directed the staff to undertake a thorough and detailed study as to the effectiveness of these residency programs through a survey of the present activities of physicians trained in those programs over the past several years. These programs were created for the specific purpose of providing additional facilities for general surgical training for those physicians contemplating advanced training in the surgical specialties. The statement has been expressed that there is little evidence available to the surgical specialty boards that a significant number of physicians certified in a surgical specialty have received their general surgical training in these types of residency programs. It is, furthermore, known that a high percentage of the residents in such programs of less than three years' duration are foreign medical graduates. A thorough study should indicate whether such a category of surgical programs is worthy of continued approval.

Revision of Essentials

ESSENTIALS OF APPROVED RESIDENCIES

Dermatology.—It was brought to the attention of the Council by the Residency Review Committee for Dermatology that the Essentials contain a statement pertaining to quantitative requirements for training in Dermatology which is unrealistic and not in effect a requirement for certification by the American Board of Dermatology. The Essentials specify that ordinarily a minimum of 1,500 new outpatients a year is considered essential in the dermatologic division and a similar number in syphilology. The Council recommended deletion of this section in the Essentials which is being referred for the information of the House of Delegates.

ESSENTIALS OF AN ACCEPTABLE SCHOOL OF MEDICAL TECHNOLOGY

The Council on Medical Education and Hospitals submits for the approval of the House of Delegates a revision of the Essentials of an Acceptable School of Medical Technology. With the exception of increasing the quantitative requirements from 35,000 to 50,000 procedures per year the changes recommended are all of an editorial nature. The complete revision is included in Appendix A.

Postgraduate Medical Education

The collection of information, its study and publication relative to needs and activities are continuing in this important part of medical education that involves continuing education for physicians in practice. The 30-month study of the 1956-1957 postgraduate courses culminated in the report, "A Geographically Oriented Study of Postgraduate Courses and Enrollments in the United States for Physicians During the Year 1956-1957", J. A. M. A. **170**:206-219 (May 9) 1959. It provided new information about the marked mobility of physicians enrolling in postgraduate courses, presented the distribution of subjects of courses, pointed out the important role that medical schools have in attracting physician enrollments, and outlined a "threshold factor" that may have some significance. The data and conclusions were based on a large representative sampling of 695 courses in which there were 20,432 enrollments. It is expected that this study will continue to be of interest and use to all those who are concerned with the planning of postgraduate courses. Its data emphasized the importance of regional and national conceptions in this field rather than confining the planning within each state, as has often occurred in the past, without regard to the educational opportunities elsewhere in the region and nation.

The annual listing of postgraduate courses for the year Sept. 1, 1958–Aug. 31, 1959 was published in The Journal August 16, 1958 (J. A. M. A. **167**:1953-2009). The 55 page list contained 979 postgraduate course listings under 42 categories by 212 sponsoring institutions and organizations. If the scheduled repeated offerings of courses are added (421), the total number of courses listed was 1400. Also included in that number of The Journal was the full text of the Internal Revenue Service regulation governing tax deduction of expenses of postgraduate education.

Because more than 90 per cent of the courses that eventually came to the attention of the Council were included in the annual listing, only one supplementary listing was published, J. A. M. A. **169**:1344-1345 (March 21) 1959. As sponsors of such educational opportunities have become aware over the past several years of the advantages to them, and to the educational worth of the courses, of long-range advance planning and the submission of information about the courses to the Council well in advance, a greater proportion of the total course-type educational opportnuities have been included in the list each year. Because it is the consensus of most of those working in continuation medical education that a single annual listing of postgraduate courses is more likely to bring useful information to the attention of potential physician enrollees than does listing in random issues of The Journal, it is expected that supplementary notices of postgraduate courses will not be published in The Journal after the September 1, 1959-August 31, 1960 listing appears in The Journal August 15, 1959. Such a single annual listing that has now become practicable will also make it possible to develop a selective listing when a suitable appraisal mechanism is fully developed.

The *ad hoc* Advisory Committee on Postgraduate Medical Education recommended to the Council in 1957 that there be developed and tested an approach that would secure better information about the educational resources and practices of the institutions and organizations active in postgraduate medical education, particularly of the course type, and outlined such a procedure. The Council endorsed this recommendation in its annual report to the House of Delegates at Philadelphia in December, 1957, and the House approved the report. Therefore, in 1958 the Council authorized the staff to proceed on a large-scale pilot study of the postgraduate educational resources of the active institutions and organizations and the application of this information to the preparation of an unpublished selective listing in order to ascertain how such a procedure would work out. That study, involving questionnaires and field visits, is still in progress. On completion, the results will be studied by the *ad hoc* Advisory Committee and then by the Council. It is probable that further recommendations in this regard will be ready for consideration by the House of Delegates within the next year. As has previously been pointed out by the Council, it is important that there be a due regard to the flexibility in approach especially needed in this phase of medical education. It is also the consensus, with which the House of Delegates apparently agreed in its approval of the 1957 and 1958 annual reports, that the present annual list of unappraised courses actually may be injuring the chances of raising educational standards in this field by giving tacit approval to some unsatisfactory activities. It is known that high quality courses stimulate physicians to seek further education of that type, while discouraging such an attitude is the physician's justifiable disappointment at the organization, quality, content, or methodology of a poor course. The development of a continuing appraisal program, carefully conceived and flexibly implemented, that influences the annual list would almost surely provide an additional incentive for the sponsors of programs to increase their educational merit as well as indicate those courses which are educationally worthy of a physician's time and money.

Education in Related Fields

In recognition of the important contributions by professional and technical groups closely related to medicine to advances in knowledge, education, research, and the provision of comprehensive care to patients under the direction of physicians, the Council is responsible for continuous study and liaison on educational matters in a number of fields related to medicine. Continuing advice and assistance are given the Council by numerous medical organizations, such as the American Society of Clinical Pathologists and the American College of Radiology, as well as nonmedical professional and technical societies, in the development of sound criteria for training and approval of curriculums. The Council is currently engaged in approval of schools for medical record librarians, medical record technicians, medical technologists, occupational therapists, physical therapists, and x-ray technicians. Several hundred survey-visits are made annually to schools of medical technology and x-ray technology by pathologists and radiologists, who are appointed by the American Society of Clinical Pathologists and the American College of Radiology, respectively. These physicians generously contribute their time and experience to make these visits without remuneration. The education director of the American Association of Medical Record Librarians effectively surveys educational programs in universities and hospitals for medical record librarians and technicians. Jointly constituted survey teams of physicians representing the AMA and therapists representing the American Occupational Therapy Association and the American Physical Therapy Association are active in evaluation and survey of medical schools, colleges, universities, and hospitals seeking initial and continued approval for occupational therapy and physical therapy curriculums. As of June 30, 1959, there were 1,418 approved schools, which included 28 for medical record librarians, 12 for medical record technicians, 703 for medical technologists, 29 for occupational therapists, 38 for physical therapists, and 608 for x-ray technicians.

Committee Activities of the Council

Numerous standing and special committees of the Council are assigned to designate functions and are engaged individually or in cooperation with other organizations or departments of the American Medical Association with certain areas of its activity in conducting studies, submitting reports and recommendations, or conducting delegated responsible assignments.

COMMITTEE TO STUDY MEDICAL AND RELATED PROFESSIONS AND SERVICES

A jointly constituted Board of Trustees–Council Committee, with representation from the Council on Mental Health, formerly entitled the Joint Committee to Study Paramedical

Areas in Relation to Medicine, has under active study an exploration of ways in which closer liaison might be developed between physicians and closely related professional and technical groups. The progress reports of this Committee are presented to the House of Delegates by the Board of Trustees.

Advisory Council on Medical Education

The Council, with approval of the Board of Trustees, has accepted membership in the Advisory Council on Medical Education. This is not an action group, but an agency primarily established for the purpose of providing a forum within which agencies which have a particular reason for being interested in medical education might discuss this mutual interest and advise regarding problems that may be related thereto. The purpose of the Advisory Council, as stated in its Constitution and Bylaws, reads:

> The Council is created to meet the need of a central agency representing the universitites, medical schools, hospitals, licensing bodies, specialty boards, public health agencies, and other national organizations in this country which deal with different phases of medical education. The Council shall serve as a clearinghouse for the cooperative consideration of those problems and programs of professional training with which more than one group is concerned; as a medium for consultation and mutual assistance in the formulation and support of adequate educational standards; and as an agency for the advice and recommendations to member and other organizations dealing with medical education.

COMMITTEE ON PREPARATION FOR GENERAL PRACTICE

This Committee constituted a study group of representatives of the Council, the Association of American Medical Colleges, the American Academy of General Practice, and representatives of the specialty areas. The final report of this Committee, including a two-year graduate program designed to provide opportunity for adequate preparation of the future physician to provide medical care for all members of the family, was presented to the House of Delegates in June 1959 and was approved. Although the Committee completed its assignment and requested that it be discharged, the House of Delegates requested that the Committee hold itself in readiness to be of assistance to the Council on Medical Education and Hospitals in implementing this basic program in preparation for family practice.

JOINT TOP-LEVEL COMMITTEE

It was considered highly advantageous to all concerned to establish a "top-level" liaison between higher education and organized medicine to consider some of the mutual areas of concern. Such a committee was appointed and held its first meeting of an informal nature on February 5, 1959. The Committee consists of three representatives from the Board of Trustees of the American Medical Association, three from the Council on Medical Education and Hospitals, three from the Association of American Medical Colleges, and two University Presidents. This Committee will concern itself with ways and means where difficulties and/or misunderstanding created by the changing situations may be avoided or resolved. Such cooperative liaison carries great potential for avoiding in the future some of the difficulties which might have been obviated through more adequate objective intercommunications in the past. Future meetings of the Committee will be prepared on a formal basis to deal with currently acute problems as they arise.

STANDING COMMITTEES

Liaison Committee on Medical Education.—This committee includes representation from the Council on Medical Education and Hospitals and the Executive Council of the Association of American Medical Colleges. The activities of this committee have been broadened to include all studies pertaining to medical education whether initiated by the Council or the Association of American Medical Colleges. For the second consecutive year an effort has been made to include in one questionnaire sponsored by the Liaison Committee on Medical Education all data pertaining to medical education used as the basis for the annual Education Number of The Journal and data needed by the Association of American Medical Colleges. Another of its responsibilities is the joint medical school accreditation program of both organizations. This Liaison Committee serves a very important function in intercommunication and cooperation between the two parent organizations.

Liaison Committee with the Advisory Board for Medical Specialties.—The major function of this committee is to keep abreast with matters of mutual interest and to collaborate in planning for the Annual Congress on Medical Education and Licensure. In February 1959, the American Medical Association, through its Council on Medical Education and Hospitals, was made a participating member organization of the Advisory Board for Medical Specialties. Though the Council on Medical Education and Hospitals is now represented on the Advisory Board, this liaison committee arrangement will be continued as long as necessary in order to continue to maintain close cooperation with the specialty areas of medicine represented on the Advisory Board for Medical Specialties.

Committee on Essentials.—At an all day session held just prior to the meetings of the Council, this Committee, consisting of representatives from the Council and its staff, carefully reviews suggested revisions and recommendations regarding the Essentials and Guides underlying the various educational programs involving approval or accreditation by the Council. The deliberations of this Committee are incorporated in a recommendatory report to the Council, and all major actions approved by the Council are reported to the House of Delegates for their approval.

Residency Review and Conference Committees.—Each committee includes representation of the particular specialty board and the Council on Medical Education and Hospitals, and in certain instances representation from the American College of Surgeons, the American College of Physicians, and the American Academy of Pediatrics. They meet from one to three times annually to review and take action concerning approval of graduate education and training programs in their respective fields. These committees have also in certain instances prepared "Guides" to assist individuals and institutions in planning and developing graduate education and training programs as well as aiding field staff personnel in determining those aspects of the program which require special evaluation. Notable among these guides is the "Guide Book for Residency Programs in General Surgery" approved by the American Board of Surgery, the American College of Surgeons, and the Council, and the three "Guides" for residencies in Aviation Medicine, Occupational Medicine, and Public Health, formulated by the Residency Review Committee for Preventive Medicine and approved by the American Board of Preventive Medicine and the Council. Currently under development is a "Guide to Residency Training Programs in Pediatrics" and a "Guide for Residency Programs in Internal Medicine". Council staff personnel function as secretaries of each of the committees and conduct their administrative activities. Committees have been established in 17 specialty areas and include:

Residency Review Committee for Anesthesiology
Residency Review Committee for Dermatology
Residency Review Committee in Internal Medicine (tripartite)
Residency Review Committee for Neurological Surgery
Residency Review Committee for Obstetrics and Gynecology (tripartite)
Residency Review Committee for Ophthalmology
Residency Review Committee for Orthopedic Surgery
Residency Review Committee for Otolaryngology (tripartite)
Residency Review Committee for Pediatrics (tripartite)
Residency Review Committee for Physical Medicine and Rehabilitation
Residency Review Committee for Plastic Surgery (tripartite)
Residency Review Committee for Preventive Medicine
Residency Review Committee for Proctology
Residency Review Committee for Psychiatry and Neurology
Residency Review Committee for Radiology
Conference Committee on Graduate Training in Surgery (tripartite)
Residency Review Committee for Urology

Residency Review Committee in General Practice.—In liaison with the Commission on Education and Hospitals of the American Academy of General Practice, the Council has established a Residency Review Committee in General Practice.

Internship Review Committee.—This committee, with representation from the Council on Medical Education and Hospitals, the American Academy of General Practice, the American Hospital Association, the Association of American Medical Colleges, and the Federation of State Medical Boards now reviews all new applications for internship approval or further extension of approval of existing programs and recommends action regarding their status to the Council. This committee also meets just prior to the scheduled business meetings of the Council.

Advisory Committee on Physical Therapy Education, and the Advisory Committee on Occupational Therapy Education.—Each of these important committees functions as the major advisory group to the Council on appraisal of educational programs and suggested revisions in criteria for training. Each group is composed of multiple representation from groups interested in the field with Council staff personnel conducting its administrative functions.

Ad Hoc Advisory Committee on Postgraduate Medical Education.—This committee has served in an ad hoc capacity to the Council for several years. Its current activities are described in the section of this report entitled "Postgraduate Medical Education."

Liaison Committee with the Council on Medical Service

During the year the Secretary of the Council received the necessary administrative clearance for the development of a permanent liaison arrangement with the Council on Medical Service. It was recognized that there were areas within the American Medical Association where it is difficult to delineate clearly between medical education and medical service and it was agreed that a permanent liaison committee be established between the two Councils for discussion of areas of mutual concern. The first meeting of this Committee was held on February 6, 1959.

Annual Congress on Medical Education and Licensure

The 55th Annual Congress on Medical Education and Licensure was held in Chicago February 8-9, 1959, attended by 1209 physicians, educators and representatives of state licensing boards. This was over 200 more than the record breaking registration in 1958. As has been the case in the past, the program was designed to focus on selected problems in medicine and medical education from a broad viewpoint, with the intent of providing a forum from which the problems could be more clearly defined so that their answers could more reasonably be sought. The areas considered during the discussions of the 55th Congress were the significance of specialism in medicine to medical education, and the role of research in the education of all physicians. Selected papers of the Congress were published in the May 16 and May 23, 1959 numbers of The Journal and collected tear sheet copies were forwarded to all members of the House of Delegates.

In order to explore most thoughtfully the problem presented by increasing specialism in medicine, background papers were presented during an initial plenary session, followed by a half-day of open conference discussions in four groups, and the presentation of the outcome of these discussions in a final half-day plenary session. The active participants included the Chairman of the Council, the President of the Advisory Board for Medical Specialties, university educators outside medicine, medical educators, specialty board members, licensing board members, representatives of the medical profession at large, hospital directors of medical education, and residents themselves.

It seemed that the time had come when medicine as a whole and its specialty groups could with benefit re-evaluate carefully the impact of newly acquired knowledge on specialization, its effects on future educational programs, as well as the relation of specialism to the parent disciplines. An intensive effort was made to explore the problems presented by increasing specialism in medicine in relation to the length and nature of educational programs, to the young people in training, the tendencies toward and away from rigidity of requirements and the significance of this, as well as the import of these on the care of the patient.

The four afternoon open conference-workshops were held on specialism in medicine from the standpoints of (1) the residency program itself, (2) the specialty board, (3) the resident, and (4) the hospital. Those discussions were reported to the second plenary session the following afternoon.

The role of research in the education of all physicians was the subject of papers and discussion during the morning session of the second day of the Congress. Following a background paper by the president of the University of Wisconsin, a noted biochemist, the role of research and its relationship to teaching and patient service were presented from the standpoint of the first two years of medical education, the last two years of medical school, the internship and residency period, the teacher himself, and the practitioner of medicine. The impact on educational programs of ready money for research as compared to sparse money for teaching was the keynote of the paper, "Maintenance of the Synergistic Relationship of Education and Research in Medicine," by Dr. James A. Shannon, Director, National Institutes of Health and Assistant Surgeon General, U.S. Public Health Service.

The 56th Congress on Medical Education and Licensure in keeping with long standing tradition will be convened in Chicago in February 1960. It is presently proposed that this next Congress focus on "The Role of Patient Care in Medical Education" and "The University Orientation of Medical Education." These two themes are of great significance to medical education and should serve as a challenging basis for a stimulating meeting.

WORKSHOP CONFERENCE FOR HOSPITAL DIRECTORS OF MEDICAL EDUCATION

On January 16 and 17, 1959 the Council on Medical Education and Hospitals and the Executive Council of the Association of American Medical Colleges cosponsored with the American Hospital Association a conference in Chicago to which were invited representatives of the Association of Hospital Directors of Medical Education. The purpose of this conference was to attempt to define the role of the director of medical education in a hospital with approved graduate training programs, and also to orient representatives of the national bodies most concerned as to the objectives of the Association of Hospital Directors of Medical Education. This was a very productive conference, and it was clear that the Association of Hospital Directors of Medical Education is not an organization striving to change existing standards of graduate education but is one which hopes to support the same high standards for graduate training in non-university-affiliated hospitals as now exist in affiliated hospitals. The result of the final summary session of the conference will be published by the American Hospital Association in the near future.

CONTINUING MAJOR STAFF ACTIVITIES

The major continuing responsibilities of the staff are:

(1) To bring to the attention of the Council those matters which it believes should warrant modification of the published acceptable standards in medical education;

(2) To modify published statements of acceptable standards in compliance with decisions of the Council (for later approval by the House of Delegates);

(3) To arrange and participate in the periodic reviews of educational programs in medicine;

(4) To present to the Council information regarding the programs reviewed so that the Council may have accurate and dependable data on which to base its decisions in ful-

filling its function as the American Medical Association's accrediting agency;

(5) To prepare and publish annual reports which serve to discharge the Council's function of informing the medical profession of the status of medical education in the United States. These reports also serve as public notification of educational programs which are approved and are of great value to students and graduate physicians in selecting those programs in which they wish to participate;

(6) To serve as a central clearing house of information regarding medical education.

OTHER RESPONSIBILITIES OF COUNCIL MEMBERS AND ADMINISTRATIVE STAFF

Members of the Council and/or its staff actively participate as members or officials of other organizations concerned with problems closely related to or impinging upon the field of medical education, such as:

Joint Commission on Accreditation of Hospitals
National Intern Matching Program
National Fund for Medical Education (Advisory Council)
American Medical Education Foundation
National Board of Medical Examiners
Federation of State Medical Boards of the United States (Bulletin)
Council on Professional Practice of the American Hospital Association (Liaison)

The Council and its staff collaborate with many organizations and agencies which have an interest in one or more aspects of medical education. Intercommunication between the Council and these various groups directed toward mutual understanding and collaboration is one of the demanding functions of the Council in terms of time, energy and basic significance from the standpoint of professional and public relations.

Changes in Council Staff

In February, 1959, after serving more than five years as secretary of the Council, Dr. Edward L. Turner accepted the newly created post of Director of the Division of Scientific Activities. Dr. Turner's experience as clinician, medical teacher, medical school dean and college president served to make his tenure of office as Council Secretary a period of particular productiveness for the Council's functions. Dr. Walter S. Wiggins, Associate Secretary of the Council since 1954, was appointed as Dr. Turner's successor.

During the course of the year, Dr. Morris Wiess resigned his position as member of the Council's Field Staff to accept the post of Medical Director of the Mandel Clinic of the Michael Reese Hospital in Chicago. Dr. M. Eleanor Blish of Houston, Texas was appointed a full time member of the Field Staff. Prior to accepting this position, Dr. Blish had been in the private practice of pediatrics and a teacher in pediatrics at Baylor University College of Medicine.

At the close of the year covered by this report, arrangements were completed to retain as Field Staff members on a half time basis, three physicians who have had distinguished professional careers. Dr. William W. Fellows has had experience in the private practice of surgery, as a faculty member of the medical schools of the University of Pittsburgh, Albany, and Northwestern University and most recently as Assistant Chief Medical Director of the Veterans' Administration Department of Medicine and Surgery. Dr. Fellows is a diplomate of the American Board of Surgery.

Dr. Winchell Craig was associated with the Mayo Clinic for many years and served as head of the Section on Neurosurgery. He is emeritus professor of neurosurgery of the Graduate School of Medicine of the University of Minnesota and is certified by the American Board of Surgery, Neurological Surgery, and Psychiatry and Neurology.

Dr. George H. Miller was on the faculty at Iowa University's College of Medicine and served as dean of the School of Medicine at the American University of Beirut. He has been Director of Education and Assistant Director of the American College of Surgery and is a diplomate of the American Board of Internal Medicine.

The experience of these individuals in medical education in general and graduate medical education in particular promises to strengthen greatly the important field activities of the Council in surveying and bringing consultative services to hospital internship and residency programs.

Respectfully submitted,
Leland S. McKittrick, M.D., *Chairman*
James M. Faulkner, M.D., *Vice Chairman*
Warde B. Allan, M.D.
John Z. Bowers, M.D.
W. Andrew Bunten, M.D.
Guy A. Caldwell, M.D.
John W. Cline, M.D.
Harlan English, M.D.
Charles T. Stone, Sr., M.D.
W. Clarke Wescoe, M.D.
Walter S. Wiggins, M. D., *Secretary*

Appendix A

ESSENTIALS OF AN ACCEPTABLE SCHOOL OF MEDICAL TECHNOLOGY

Prepared by the Council on Medical Education and Hospitals of the American Medical Association with the Cooperation of the Board of Schools of Medical Technology and the Board of Registry of Medical Technologists of the American Society of Clinical Pathologists, and the American Society of Medical Technologists

PREAMBLE

Three organizations are primarily concerned with the training of medical technologists, the Council on Medical Education and Hospitals of the American Medical Association, the American Society of Clinical Pathologists, and the American Society of Medical Technologists. Two Boards of the American Society of Clinical Pathologists represent this Society. The Board of Schools of Medical Technology is primarily concerned with the evaluation and inspection of schools of medical technology, acting in an advisory capacity to the Council, assisting also in the maintenance of high standards of education and in the development of new schools of medical technology. The Board of Registry of Medical Technologists investigates and certifies the competency of the technologists.

The Council, with the cooperation of the Board of Schools of Medical Technology, the Board of Registry of Medical Technologists, and the American Society of Medical Technologists, has established the following standards for this type of training for the information of schools, physicians, hospitals, prospective students, and others and for the protection of the public.

Technologists are being trained in these schools to work under the direction of qualified physicians asd not as independent practitioners.

I. Administration

1. Acceptable schools for training medical technologists may be conducted by approved medical schools, hopsitals, or other acceptable laboratories suitably organized in accordance with present educational standards.

2. All training of technologists shall be under competent medical control.

3. Resources for continued operation of the school should be insured through regular budgets, gifts, or endowment, but not entirely through students' fees. Experience has shown that commercial schools operated for profit frequently do not adhere to proper ethical and educational standards and therefore are not acceptable.

II. Organization

4. Adequate space, light, and modern equipment should be provided in the laboratory department. A library containing up-to-date references, texts, and scientific periodicals pertaining to clinical laboratory work and pathology should be maintained, or be readily accessible to the institution.

5. Satisfactory record systems should be provided for all work carried on in the department. Monthly and annual classifications of the work of the department should be prepared.

6. Transcripts of college credits and other credentials must be available. To insure appropriate subsequent registration it is essential that evaluation of entrance credits be obtained from the Board of Registry of Medical Technologists. An acceptable school keeps records of each student's attendance and grades and it is also recommended that the tests performed be recorded. In addition, the school has a synopsis of the complete curriculum on file, a copy of which is submitted to the Council on Medical Education and Hospitals. This curriculum should include the rotation of assignments, the outline of the instruction supplied by the laboratory and a list of the prepared specimens which are used to augment the experience of the student.

7. At least two or more students should be enrolled in each class.

III. Faculty

8. The school should have a competent teaching staff. The director must be a graduate in medicine who is certified in clinical pathology by the American Board of Pathology or who has had training and experience in clinical pathology acceptable to the Council. He shall take part in and be responsible for the actual conduct of the training course. He shall be in daily attendance for sufficient time to supervise properly the laboratory work and teaching.

9. In laboratory practice the enrollment may not exceed two students to each member of the teaching staff. The staff *must* include not less than one instructor whose duties include supervising the teaching program and who possesses a Bachelor's degree, is a registered medical technologist (ASCP) and who has had three years of experience or its equivalent. This is in addition to the laboratory director. In order to be considered as an instructor, a technologist should be a registered medical technologist (ASCP) and should preferably have at least one year of experience or its equivalent. Members of the hospital staff or visiting instructors must have regular assignments that cover a complete course prescribed in these essentials.

IV. Prequisites for Admission

10. In order to conform to Board of Registry of Medical Technologists requirements for admission to examination the following admission requirements should be fulfilled prior to being accepted in an approved school. Two years, 90 quarter hours, or 60 semester hours of college work in a college or university accredited by a recognized standardizing association. During the two years the following courses must be taken: (1) Eighteen quarter hours or twelve semester hours of biology which may include general biology, bacteriology, parasitology, physiology, anatomy, histology, embryology, and zoology (bacteriology is especially recommended); (2) One full academic year (a minimum of nine quarter hours or six semester hours) of beginning inorganic chemistry, which may include qualitative analysis, including lectures and laboratory; and in addition a minimum of four quarter hours or three semester hours of either quantitative analysis, organic chemistry or biochemistry, including lectures and laboratory, (quantitative analysis is especially recommended); (3) Electives sufficient to give a total of ninety quarter hours or sixty semester hours of college credit. The following courses are highly recommended but they are not required: physics, a course in general mathematics, and typing.

11. Only those individuals having the above educational requirements may participate as students in this entire program. Schools are encouraged to accept only students having three years of college and to participate in affiliated programs leading to a degree.

12. Effective January 1, 1962, the pre-technical educational requirements for admission to a school of medical technology approved by the Council will be increased from two years (sixty semester or ninety quarter hours) to three years (ninety semester hours or one hundred and thirty-five quarter hours) to include additional courses to broaden the science background.

V. Curriculum

13. The course of training should not be less than twelve months in duration and should include the following subjects: biochemistry, hematology, bacteriology, parasitology, histologic technic, serology, urinalysis, blood banking, basal metabolism, and miscellaneous clinical microscopy.

14. The instruction should follow a planned outline similar to "A Curriculum for Schools of Medical Technology" of the Board of Registry of Medical Technologists and should be accomplished by text assignments, lectures and discussions, demonstrations, supervised practice, quizzes and written, oral and practical examinations.

VI. Clinical Material

15. Each student should receive practice training, adequate in kind and amount, under competent supervision. Participating hospitals should be registered and be otherwise acceptable to the Council on Medical Education and Hospitals of the American Medical Association. Approved schools should have available laboratory material equivalent to that provided by a hospital of 100 beds and 3,000 yearly admissions and a minimum of 50,000 tests a year with a distribution of clinical material sufficient to provide adequate technical training in the various laboratory divisions.

VII. Ethics

16. Excessive fees and commercial advertising should be considered unethical.

17. Schools conducted primarily for the purpose of substituting students for paid technologists will not be considered for approval.

VIII. Health

18. Applicants shall be required to submit evidence of good health and successful vaccination, and a report of a medical examination should be a part of the students' records. This examination shall include a roentgen examination of the chest. Provisions should be made for medical care and hospitalization, when necessary, for a reasonable length of time.

IX. Admission to the Approved List

19. Application for approval of a school for the training of technologists should be made to the Council on Medical Education and Hospitals of the American Medical Association, 535 North Dearborn Street, Chicago 10, Illinois. Forms will be supplied for this purpose on request and should be completed by the director of the laboratory requesting this approval. Inquiries regarding the registration of qualified medical technologists should be addressed to the Board of Registry of Medical Technologists, Post Office Box 44, Muncie, Ind.

20. Approval may be withdrawn whenever in the opinion of the Council a school does not maintain an educational service in accordance with the above standards. Whenever a training program has not been in operation for a period of two consecutive years, approval may also be withdrawn.

21. Approved schools should notify the Council on Medical Education and Hospitals whenever a change occurs in the directorship of the school.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

This report covers the activities of the Council and its seven committees during the period from July 1, 1958, to June 30, 1959. Through numerous meetings, staff travel, review of literature, and personal communication, the Council has kept itself informed on the many facets of the economic and social aspects of medical care. Through newsletters, exhibits, pamphlets, regional conferences, and the various American Medical Association communications media, the Council has endeavored to transmit this information to the medical profession.

One of the major changes that has occurred in the Council's ranks during the year has been the retirement of Dr. Joseph D. McCarthy as chairman of the Council. As a member since 1948, Dr. McCarthy has worked with and led the Council through these years of major evolution in medical care. He has given unselfishly and unstintingly of his time to the medical profession in his work with the Council and the many committees on which he has served. Because of his years of experience the Council has requested the privilege of having Dr. McCarthy serve as a consultant. Words cannot convey suitable recognition for the devotion Dr. McCarthy has displayed; nevertheless, the Council wishes to have its appreciation to him recorded in these official proceedings.

The Council is of the opinion that it is vital to the Association to call on physicians with a wide variety of experience and viewpoints to formulate policies which will ultimately result in the best possible care for the public and in policies most satisfactory to the profession as a whole. With this in mind the members of the House will note the wide geographic representation as well as the wide representation from the standpoint of types of practice of the physicians serving on these "policy suggesting" committees of the Council. This diversity of private practice viewpoints strengthens the Association and provides a personal rapport with physicians in many areas of the country.

Vacancies occur on these committees from time to time, and so the Council would welcome suggestions from any member of the House for physicians with interest and ability to serve on committees dealing with medical facilities, indigent care, maternal and child care, medical care for industrial workers, federal medical services, insurance and prepayment plans, and aging. To bring new men, seasoned in medical society work, into activities at the national level has an invigorating effect on all concerned.

To the more than 60 physicians currently serving on committees, the Council wishes to extend commendation for their work during the year.

A listing of activities of the Council and its committees would merely be a repetition of the report. Nevertheless, a number of highlights and recommendations should be called to the attention of the House.

1. In the reevaluation of A. M. A. policy in reference to public health activities, indications to date are that the six basic functions contained in this policy no longer approximate the sum total of public health concern.
2. In the study of physicians' offices owned by or adjacent to hospitals, a majority of physicians seem to have no objection to the location of physicians' offices in such facilities.
3. To improve the quality of nursing home care the A. M. A. and the A. N. H. A. have jointly issued "Guides for Medical Care in Nursing Homes and Related Facilities" for distribution to medical societies, nursing homes, and health departments.
4. With six and one-quarter million persons on public and general assistance, costing over $300 million a month of public money, of which $35.5 million was expended in vendor payments to physicians, hospitals, and nursing homes, it behooves the medical profession to take an active interest in this problem and concern itself with the administration of programs, eligibility requirements, financing, and the range in quality of medical services provided. Furthermore, to the extent that financially catastrophic illness precedes pauperization of normally self-supporting patients, medical societies should undertake to study ways and means of preventing such catastrophes.
5. A "Guide for the Study of Perinatal Mortality and Morbidity" has been distributed to state and local medical societies, health departments, and individual hospitals.
6. So long as the V. A. policy prohibits a decrease in the total number of authorized beds, some national policy should be established to insure that non-service-connected care is given first to those who are truly incapable of meeting the costs from their own resources. This calls for (1) a realistic definition of "inability to defray necessary expenses", (2) a realistic estimate of the cost of care, and (3) priority for financially catastrophic cases. These have been spelled out in this annual report as recommendations to the House.
7. Specific recommendations have been made in reference to the care of service-connected disabilities to provide the service-connected patient with a right to choose between private care by a personal physician in the facility of his choice at Federal expense and treatment in a Veterans' Administration facility. Further, it is recommended that the House of Delegates support those state associations, which at present have intermediary contracts for Hometown Care, in their opposition to the curtailment of the medical profession's representation in the administration of these programs.
8. In negotiations with federal agencies it is suggested that each state medical association which has not already done so, consolidate under one committee all responsibility for negotiation with governmental agencies for the private care of patients for whom the government assumes responsibility.
9. In the field of aging, because of the outstanding leadership displayed by the medical profession at the local, state, and national levels, non-medical groups active in this field are turning increasingly to the profession for guidance. Continued leadership in this sphere is of paramount importance and can only be maintained by the active participation of physicians in various programs for aging throughout the country.
10. To stimulate increased physician activity in health maintenance programs for their patients the Committee on Aging has developed a "Periodic Health Appraisal Form" which is available on request from American Medical Association headquarters.
11. Also in the field of aging, the Committee on Aging and the Council stress the need for physicians to assume an active role, individually and through their medical societies, in the pre-planning conferences for the 1961 White House Conference on Aging.
12. Voluntary health insurance and prepayment programs continue to expand both in enrollment and in scope of benefits. During the past few years there has been an annual increase of roughly 1½ million subscribers for hospitalization, 2½ million for surgical expense, and 3½ million for medical expense benefits. Under the newer types, major hospital and medical expense benefits and "comprehensive" coverages, the rates of growth have been much greater. The aggregate amounts (benefits) paid by health insurance and prepayment plans for health care are increasing at a more rapid rate than the increases in the number of persons insured.
13. State associations, component societies, local plans, and private insurance carriers have responded realistically to the action of the House in Minneapolis calling for increased insurance and prepayment coverage for the aged who are living on reduced incomes and have modest resources. A detailed report on this response will be submitted in a Supplementary Report at the Clinical Session. During its relatively brief tenure this Committee has accomplished a great deal.
14. Forty-eight state medical associations now have actively functioning committees on aging.

Committee on Medical Facilities

Since the last report concerning the activities of this Committee, Dr. John M. Rumsey, San Diego, California, was appointed to replace Dr. Edward C. Rosenow, Jr., Los Angeles, California, who now serves as a consultant to the Committee.

Other members are Drs. Willard A. Wright, Chairman, Williston, North Dakota; William F. Costello, Dover, New Jersey; Robert L. Novy, Detroit, Michigan; David Henry Poer, Atlanta, Georgia; W. C. Stover, Boonville, Indiana; and Walter E. Vest, Huntington, West Virginia.

The Committee has met on four occasions—September 27-28, 1958, in Chicago; December 5, 1958 in Minneapolis; February 18-19, 1959 in Cincinnati, Ohio; and April 25-26, 1959 in Chicago.

NAME OF COMMITTEE

In the interest of clarity and brevity, the name of this Committee has been changed from Committee on Medical and Related Facilities to *Committee on Medical Facilities.* This name change was authorized by the Council on Medical Service and the Board of Trustees in June of this year.

MAJOR STUDIES

Background: In November 1956 the Board of Trustees authorized the Council on Medical Service to make the following studies:

1. To strengthen the American Medical Association as an organization for all doctors of medicine, it is suggested that a study be made to evaluate the relationship of physicians who are not in private practice of medicine to those in private practice.
2. To provide leadership in the extension of local public health services throughout the nation, a study shall be made to analyze the growth and present status of local health units and relationship of these services to the private practice of medicine.

The Council, through its Committee on Medical Facilities, was directed to proceed with the studies.

Part One—"Study of Organizational and Professional Relationships Between Physicians in Private Practice and Those Not in Private Practice".

In this study, the answers to the following four questions are sought:

1. What has been the growth in the number of physicians not in private practice?
2. If substantial growth is evident, what is its import?
3. To what extent do intra-professional problems exist between private and non-private practitioners?
4. What steps should be taken by organized medicine to strengthen the A. M. A. as an organization for all doctors of medicine?

Part Two—"Study of the Growth and Present Status of Public Health Services".

Scope of Study: The scope of Part Two is to re-evaluate the 1950 House of Delegates' policy statement which lists six basic services to be provided by public health authorities.

1. Vital statistics
2. Public health education
3. Environmental sanitation
4. Public health laboratories
5. Prevention and control of communicable diseases
6. Hygiene of maternity, infancy and childhood, if private facilities are unavailable.

To date indications are that the "basic six" no longer approximate the sum total of public health concern. In addition to these traditional services, many public health authorities are now interested in diabetes control, cancer control, rheumatic fever prophylaxis, indigent medical care, mental health, heart disease and accident prevention.

Present information concerning the scope of public health services is fragmentary and provides no clear insight of the impact of this expanding pattern of services on the private practice of medicine. Thus, the objective of this study is two-fold: (a) to take an inventory of public health services in order to determine its present status and emerging patterns and (b) to redefine the relationship of public health to private practice.

Study Auspices: Since this represents an evaluation of the *American Medical Association's concept of public health,* it was decided the study should be under the direct financial and administrative control of the Committee on Medical Facilities, rather than under joint sponsorship of organized public health groups. However, because of the nature of the study, consultants from the public health field have been selected to assist the Committee and staff:

1. American Public Health Association—Thomas Hood, M.D. (Deputy Director)
2. Public Health Service—John Porterfield, M.D. (Deputy Surgeon General)
3. Association of State and Territorial Health Officers—Wilson Sowder, M.D. (Health Officer, Florida)
4. American Association of Public Health Physicians—L. L. Fatheree, M.D. (Vice President)
5. Local Health Officer—Joseph Molner, M.D. (Health Officer, Wayne County, Michigan)

The Committee will also seek the assistance of other departments within A. M. A. Headquarters.

Study Methodology: The Committee is following essentially the methodology employed for the Hill-Burton study:

1. Review of existing data on public health activities. All periodicals, books and manuscripts were checked for pertinent material. This research is compiled and will be incorporated in the final report.
2. Field trips and conferences to obtain a cross section of professional views on metropolitan, urban, and rural public health services and trends.

STUDY OF PHYSICIANS' OFFICES OWNED BY OR ADJACENT TO HOSPITALS

This study is being done as a result of a resolution submitted to the House of Delegates. It is concerned with the possible impact on medical practice of great expansion of physicians' offices owned by or adjacent to hospitals. While many areas do have such facilities, there are only a few in which any substantial percentage of physicians actually have their offices so located. The nine major areas with a concentration of such facilities selected for the survey are:

Memphis, Tennessee
Houston, Texas
Philadelphia, Pennsylvania
Los Angeles, California
Atlanta, Georgia
Hartford, Connecticut
Chicago, Illinois
Rockford, Illinois
Grand Rapids, Michigan

In surveying these areas, the Committee is seeking answers to the following questions:

1. Does the hospital with which you have primary affiliation rent such facilities?
2. How does this affect your relationships with other physicians?
3. How does this affect your hospital relationships?
4. Have you any reason to object to this activity by hospitals? If yes, why?

The survey so far seems to indicate that the majority of physicians have no objection to the location of physicians' offices in such facilities. However in each area there is a substantial minority which objects strongly to such arrangements.

NURSING HOMES

As reported in the last Annual Report, the Committee on Medical Facilities has been asked to study activities in the field of nursing homes. The following reports on these activities are for the information of the House.

AMA-ANHA Liaison Committee

For the past three years, this Committee has been coordinating activities in the field of nursing homes. A. M. A. representatives to this Committee are Drs. Willard A. Wright, Williston, North Dakota, Chairman of the Council's Committee on Medical Facilities; Dean W. Roberts, Chicago, Illinois, member of the Council's Committee on Indigent Care; and Frederick C. Swartz, East Lansing, Michigan, Chairman of the Council's Committee on Aging. This Committee has held no formal meetings this past year, but has had many informal meetings and conferences.

A conference was held with representatives of the American Hospital Association, American Nursing Home Association, Public Health Service, Bureau of Public Assistance and the American Medical Association. The meeting was devoted to discussion of the Public Health Service's proposal concerning a classification and numbering system for hospitals and facilities for the chronically ill and aged. The proposal as stated did not meet the approval of the groups represented.

Guides for Medical Care in Nursing Homes and Related Facilities

One of the great needs, not only for the aged but for many others who have chronic illnesses, is improvement in the standards of the nation's nursing homes. Although we have approximately 25,000 nursing homes throughout the United States, far too many are of inferior quality. To improve these facilities the AMA-ANHA Liaison Committee has taken the first step by developing "Guides for Medical Care in Nursing Homes and Related Facilities":—

Preface

The United States today has over 25,000 in-patient facilities other than general hospitals with an estimated capacity of 450,000 beds. These facilities have been grouped under the category of "nursing homes". More than 20,000 of these facilities are proprietary, or commercially owned, accounting for some 232,000 beds. The remainder are under public or non-profit ownership, and account for approximately 218,000 beds.

Grouped under this term "nursing homes" are facilities ranging from children's convalescent homes to county poorhouses, from institutions providing every general hospital service except surgery, to boarding homes providing the simplest of supportive services to relatively well older persons.

Primarily however, these facilities, by whatever name they are called, are caring for people who are old. The average age of patients in all types of facilities is 77. The great majority are over 65.

It is generally recognized that the standards of care in a sizable portion of these facilities can be improved. It is also recognized that the need for such facilities can be expected to increase with the growing number of older persons in our population and the wider use of such facilities for post-hospital convalescent care.

As a service to these facilities, their patients, and the physicians caring for these patients, the following guides for medical care in nursing homes and related facilities have been developed. These guides are suggested to assist physicians in making the best use of such facilities, and to aid administrators of these facilities in seeing that their patients receive proper medical attention.

Nursing Homes with Skilled Nursing Care and Nursing Homes with Skilled Nursing and Personal Care

1. Each patient admitted should have a personal physician who knows of the admission arrangements and agrees to assume responsibility.
2. Each patient admitted should come with a complete history and physical examination, or should have such examination immediately upon entering the home, *including chest x-ray, necessary laboratory work*, an evaluation of his potentialities for rehabilitation, at least to self-care, and full orders for treatment. These orders should be kept up-to-date by daily nursing notes and periodic progress notes by the physician as well as written directives for care and medication as they are changed.
3. Each patient should have periodic visits by his personal physician. The frequency of these visits should be dictated by the medical needs of the patient.
4. Each patient should be served, in case of emergency, preferably by his own physician.
5. Each skilled nursing home should have a principal staff physician or physicians for consultation in general medical policies of the home. He or they would also be available for emergency calls when the patient's regular physician is unavailable. This physician or physicians would also advise the nursing home administrator in matters pertaining to administrative procedures, nursing care, physical or other restorative therapy, special dietary arrangements, storage and dispensing of medications, and medical records.
6. Each skilled nursing home should make every effort to help patients to achieve their fullest potential for self-care, through treatments and procedures ordered by the patient's physician. These procedures may be as simple as early and progressive ambulation, the correction of sight, hearing, dental or orthopedic handicaps with proper appliances, retraining in the activities of daily living, the use of heat packs, or lamps, and simple, graduated exercises for strengthening of affected parts. For the more complicated procedures, skilled nursing homes could well arrange for the part-time or visiting services of a professional therapist to provide (under the direction of the M.D.) direct services and to train the home staff in many simple procedures. The home may even maintain special rehabilitation facilities under the supervision of a professional therapist. Rehabilitation procedures which are beyond the scope of the home should be provided through cooperative arrangements with other appropriate community facilities and agencies.
7. Each nursing home should have arrangements with a near-by general hospital for the transfer with minimum delay of any patient whose condition requires it.
8. Each nursing home should maintain liaison with physicians of the local medical society for the purpose of obtaining consultation and guidance on all matters affecting medical care.
9. Each nursing home should consider using consultative services in nutrition and diet therapy provided by the state health department, or by other agencies or persons qualified to perform such service and should assure that all dietary regimes ordered by the patient's physician are carried out.
10. Each nursing home should be conscious of the dental needs of its patients. A dental evaluation of the patient should be included in the health record. The patient should be seen as often as necessary by his own dentist, if available, or by a principal dentist selected by the home.

Homes for Personal Care and Homes for the Aged

1. Each patient should have named in his admission record a personal physician who could be called in case of need.
2. Any patient who is under physician care should come to the home with written orders by his personal physician for continuing his program of medical care.

3. Personal care and old-age homes should have arrangements with a physician to serve as a medical advisor for the home as a whole and to provide emergency care whenever the patient's own physician is unavailable. This physician should serve as consultant on medical care and related matters such as restorative therapy, special dietary arrangements, storage and dispensing of medications, and medical records.

   In general, the medical activity envisioned as going on in this type of home and this segment of a larger nursing home is equivalent to that type of medical activity provided in an individual's own home.
4. Periodic health examinations are recommended.
5. The maintenance of good mental and physical health is dependent on supervised physical activity and mental exercise and stimulation. Preventive and rehabilitative programs to this end should be the responsibility of the administration in this type of home. If patients are up and about, every effort should be made to keep them ambulatory, through proper diet, preventive exercises, preventing accidents, interesting and stimulating activities and immediate recognition of any signs of deterioration. Every effort should be made to assist bed-bound patients in becoming ambulatory, through progressive bed exercises, and then assistance in getting up for longer periods each day, unless such patients are bed-bound by physician's orders.
6. Nutrition and diet information may be obtained through consultants at the state health department or other appropriate agencies, and all necessary special diets should be arranged for by the home.
7. The patient's dentist should be known and consulted as often as necessary.
8. Personal care and old-age homes should have arrangements with a general hospital for immediate transfer of any resident who needs intensive medical care.

These "Guides" have been approved by the Council on Medical Service, AMA-ANHA Liaison Committee, and the Governing Council of the American Nursing Home Association. To stimulate all concerned, they have been sent to the A. M. A. House of Delegates and Board of Trustees, to all constituent and component medical societies, medical society committees on aging, members of the ANHA, state and local health departments and other related and interested groups. If we are to have top quality nursing homes, physicians and medical societies must take an active part in promoting these "Guides".

REGIONAL HOSPITAL CONFERENCES

During the first half of 1959 the American Hospital Association and the Public Health Service sponsored a series of four regional conferences on the development of principles for planning a future hospital system.

These meetings brought together representatives of state and metropolitan hospital associations, state hospital planning agencies and other related associations and agencies having a direct interest in planning for hospital facilities and services.

The American Medical Association was invited to send three delegates to each of the regional conferences. These meetings were held in Chicago (April 15-17), New Orleans (April 23-25), Salt Lake City (April 30-May 2) and Washington, D. C. (May 13-15).

The workshops for each conference dealt with the following major subjects:

Workshop A—Planning the proper balance between types of patient care facilities.

Workshop B—Planning for distribution of patient care facilities in a related geographic area.

Workshop C—Planning to overcome economic barriers to development and efficient utilization of patient care facilities.

Workshop D—Planning individual hospital facilities with the hospital system of the future.

Although some of the principles adopted by the various groups may not be as acceptable as would be desired, the A. M. A. was very forunate in having a group of spokesmen who did a very effective job of representing the practicing physician. Undoubtedly, the proper role of medicine in providing leadership for the development of community health programs would have been grossly understated had it not been for their efforts.

HILL-BURTON ACTIVITIES

The Rehabilitation Category

The Committee met with the Committee on Rehabilitation to discuss conclusions and recommendations in the Hill-Burton Report relative to the rehabilitation center category. This meeting resulted in the following *recommendations:*

1. That the A. M. A. should go on record as favoring multiple disability type facilities as opposed to single disability type facilities.
2. That the A. M. A. should go on record favoring centers as units which are geographically close to a hospital and which have good administrative liaison with such a facility.

HOMEMAKER SERVICES

A National Conference on Homemaker Services was held in February to stimulate the development of homemaker services throughout the United States.

The Conference was attended by representatives of the Department of Health, Education, and Welfare, voluntary health agencies, state and local health and welfare departments and other interested parties and was divided into five sections:

1. What distinctive needs and purposes can be met by homemaker services?
2. Who needs homemaker services?
3. How do you plan and organize homemaker services?
4. What is good administration in homemaker services?
5. How to develop community understanding and support of homemaker services.

PHYSICIANS PLACEMENT SERVICE

For the past fifteen years physician placement information has been available through the A. M. A. That such information is in demand both by physicians seeking a location and by those seeking the services of a physician, has been proved once again by the volume of requests received by the Physicians Placement Service during the past year. The number of inquiries, in the form of letters, office visits and long distance telephone calls, reached an all time high during the year, July 1, 1958 through June 30, 1959.

During the year 1,340 requests were received from physicians seeking location information and 2,600 were received from communities and others seeking the services of a physician.

Over the past several years the primary emphasis has been one of stimulating all state associations and the larger specialty groups to establish placement services, with the A. M. A. acting as a central clearing house. For communities that want and need a physician, the state placement services (1) work toward informing the community of methods for securing a physician, (2) provide lists of physicians seeking a location, (3) cooperate with local and national organizations interested in the problem, and (4) make available information on the medical needs of a town, to physicians seeking a location.

The increasing number of requests from specialists has brought about an expansion of some placement effort in recent years to supplying information to this group. Calling the ten specialty society placement services to the attention of physicians has been a part of this effort.

This is a service to physicians in several ways: (1) It provides an opportunity to review locations across the country; (2) a direct location to practice may be secured; (3) those who feel the need to relocate can secure information without publicizing their intentions; (4) physicians already in practice may find an associate or additional group members; (5) physicians with the Armed Services overseas have been able to secure information about opportunities so that the paper work involved in screening locations can be started well before the release date; and (6) many foreign trained physicians who have elected to become a part of the American medical profession have been encouraged at finding that this group would offer a helping hand in locating.

During the year a report on activities in this field appeared in the "Medicine at Work" section of THE JOURNAL; the front page of an issue of the *Wall Street Journal* contained a news note; a brief statistical summary was placed in the *AMA News*; the National Association of Retail Druggists carried a full column; *Medical Economics* carried an article on placement; in addition, the subjects, "placement service and management information" were listed with the services enumerated in the folder now being sent with the A. M. A. membership cards; and early this year a small classified advertisement was placed in THE JOURNAL. All of these notices have brought the Placement Service to the attention of more physicians and have resulted in new inquiries.

OTHER ACTIVITIES

Liaison with C.M.E.H.

The Joint Liaison Committee of the Councils on Medical Service and Medical Education and Hospitals met in February. The agenda was composed of two principle items, one of which will be reported in the section dealing with Federal Medical Services.

One item had to do with statements adopted by the Committee on Medical Care plans of the *Association of American Medical Colleges*, having to do with (A) provision for paying full-time clinical faculties for medical services provided to pay patients and (B) provision for paying residents for providing medical services.

In reference to (A) above, the liaison committee reached agreement. In reference to (B) above, the Council on Medical Service representatives were unable to agree with C.M.E.H. or A.A.M.C. that residents should be paid for services rendered to pay patients. Further discussion will be carried on with reference to (B).

Committee on Indigent Care

There has been one change in the Committee membership during the past year. Dr. H. Phillip Hampton of Tampa, Florida, has been added to the Committee to replace Dr. E. P. Coleman of Canton, Illinois. Other current members are Drs. John Flack Burton, Oklahoma City, Chairman; Albert J. Bowles, Seattle; I. Jay Brightman, Albany; Wesley W. Hall, Reno; Eugene A. Ockuly, Toledo; and Dean W. Roberts, Chicago. Committee consultants are Mr. R. M. Hilliard, Chicago, and Mr. Nelson B. Neff, Reno.

COMMITTEE MEETINGS

The Committee held two meetings in Chicago during the year, in November and April. At the November meeting, representatives of the Bureau of Public Assistance of the Department of Health, Education, and Welfare and of the American Public Welfare Association were guests of the Committee; at the April meeting, Dr. Solomon J. Axelrod, Professor of Public Health Economics of the University of Michigan, was a guest, to discuss studies of medical care for aged assistance recipients he is directing for the A. P. W. A.

COMMITTEE LIAISON

Through these meetings and consultation at the staff level, the Committee maintains an informal liaison with the Bureau of Public Assistance, the Federal agency most directly concerned with medical care for the indigent, and with the American Public Welfare Association, the professional organization most directly concerned with the actual administration of the various public aid programs. These contacts not only provide sources of factual data concerning indigent care problems, but also help acquaint the Committee members with administrators' views of assistance economics and the place of medical care in the total picture.

PROSPECTUS

At its April 1959 meeting, the Committee drew up a *Prospectus* for current and future activities, which is summarized below:

I. The Problem

Most states have established monetary aid programs for the needy, but current political claims of inadequate medical and hospital services for this group will probably continue. The effective answer to pressure for expanded Federal medical programs is *proof* that the needy can be and are taken care of without new Federal programs.

II. The Medical Profession's Responsibility

The average patients does not clearly distinguish between the various agencies and professional groups involved in the total health care picture, but considers the medical profession basically responsible for the whole complex. The medical profession, as a result, is placed in a position either of refusing responsibility for anything but physicians' own services or of accepting a certain degree of responsibility for all health services. The Committee believes that the profession should work *actively, formally,* and *publicly* to assure the adequate, high quality care for the needy demanded by A. M. A. policy statements.

III. Indigent Care Goals

Specific goals envisioned by the Committee include medical liaison with public and private welfare agencies at national, state and local levels; information centers listing medical and auxiliary resources available to the needy in the community; assurance to the public, through liaison with ancillary and auxiliary health services, that these services are available to the needy; medical initiative in explaining to the public the need for funds *essential* to medical care programs.

As recommended by the House in 1958, the medical profession should become familiar with methods used in determining eligibility and should participate in continuing reevaluation of these standards. Emphasis should be laid on the need for standards for those not on assistance rolls who require aid only to obtain medical care. Medical societies should work especially to implement the A. M. A. policy that the needy should be allowed to choose the source of their care from lists acceptable to the professions concerned, of participating physicians, dentists, and clinics, and that continuity of care should be encouraged.

IV. Committee on Indigent Care Activities

Specific Committee activities underway or projected include pilot studies in several states, collection and dissemination to state associations of data on assistance medical care plans, establishment and publicization of pilot projects in cooperation with state or county societies, and Committee and staff consultation with state and county societies as requested.

GENERAL PROBLEMS

Changing Medical Picture.—In the early part of the century the physician could usually, through his own charity, assure needy patients of the same care as that received by the fully self-supporting members of the community. Today, "adequate, quality care" means not only the physicians' services, but also such ancillary hospital and convalescent care, prescriptions, and therapy, as he decides are needed. Further, it is coming to be a matter of common opinion that proper medical and hospital care is every citizen's *right* rather than a privilege, and this opinion appears to be gaining ground in both the state and national legislatures.

On the other hand, while increased use of prepayment and insurance mechanisms have lightened the economic burden of medical and hospital care for many paying patients, they have at the same time made it more difficult for some hospitals to absorb the expense of charity care.

The medical profession must therefore accelerate steps to formulate and initiate effective health care programs for those in need, with proper medical advice and control. Delay may mean a forced retreat before gradually expanding programs of wholly governmental medicine.

Groups to be Aided.—Corollary to the change in the medical picture is the change in the population groups which need help in meeting medical care costs. In the past, two groups were primarily involved: the *indigent*, who needed help to meet ordinary daily living costs, and the *medically indigent*, who could meet other costs without assistance but needed help when medical expenses arose. The Committee feels that the latter term is no longer either adequate or accurate.

One portion of this category consists of persons whose income is barely above the indigent level, so that they require help whenever health problems arise. As proper medical care has come to be considered one of the necessities of daily life, these provisionally or "marginally indigent" persons could well be considered a part of the total indigent group, to be aided through the same programs as need arises.

For the other portion of the so-called "medically indigent" group, however, the need for assistance arises not from their low income level, but from the financially catastrophic expense involved in long-term treatment, intensive hospital care, or expensive medication. This concept, of course, has already achieved a place in the prepayment and insurance field, in "major medical" coverage.

Programs to aid in financing or providing health care for those in need should, accordingly, be aimed today not merely at the problems of *indigency*, but also of *catastrophic illness*. Official policy statements of the American Medical Association in regard to indigent care have, in the past, been directed primarily at *tax-supported* personal health service programs, the indigent having long been accepted as a community responsibility. The Committee feels that the profession must intensify its search for means of easing the burden of catastrophic illness, particularly for those who have been unable to obtain or afford prepayment or insurance coverage, or whose coverage is insufficient.

Adequacy of Present Programs.—In February 1959, over 6¼ million individuals were reported as on governmental assistance rolls; 5.3 million of these were in the two Federally-aided programs of Old Age Assistance and Aid to Dependent Children. Only the Old Age Assistance program has declined during the past year; this group has decreased in number yearly since 1950, as Old Age and Survivors' Insurance (OASI) coverage has increased. Expenditures for the Federally-aided Public Assistance and the state-local General Assistance programs during February were $308 million, of which $35.5 million was expended in vendor payments to physicians, hospitals, nursing homes, and other providers of medical services. No figures are available as to the amount paid the assistance recipients themselves to meet medical expenses.

However, adequate information as to the quality and quantity of medical care provided is still lacking. At the national level, in response to a request from the Subcommittee on Administration of the Social Security Laws of the House Ways and Means Committee, the A. M. A. Executive Vice President has called attention to the need for more complete and uniform state reports on medical care, and more adequate medical staffing for the Federal Bureau of Public Assistance, as well as the 1958 recommendation of the Council adopted by the House of Delegates that states be allowed to combine the medical programs for the four Public Assistance programs.

At the state and local level, there does not at present appear to be any source of comprehensive data on General Assistance medical care. Since no Federal funds are involved, state reports to Federal agencies are not necessarily complete and, in some states, this is solely a county or township responsibility, entailing no complete report to the state government agencies. A recent report for New Jersey estimates that over 500 public and private agencies provide indigent health services; this vast multiplicity of agencies, and the wide variety of methods in use in the different counties and townships, make it difficult to determine the amount and quality of care provided for those not on Public Assistance rolls.

COMMITTEE STUDIES

General Areas.—The Committee is maintaining a continual study of legislation affecting the administration of Public Assistance medical care. The only significant change in this field in the past year resulted from the Social Security Amendments of 1958, changing Federal matching formulae and returning to the states the prerogative of allocation of funds for medical care, described in the Council's supplementary report, December 1958.

The Committee has also given particular attention to the problems involved in aiding the "provisionally or marginally indigent" and those faced by catastrophic illness, and hopes to be able to report specific recommendations for the improvement of present programs or the development of new programs in these areas shortly.

In the area of obtaining more information concerning General Assistance medical care, the Committee notes that, in recent years, a number of states have initiated comprehensive studies of their resources for care of the needy, frequently with the cooperation or at the instance of the state medical association. Such studies have been carried on in Kentucky, Georgia, and Florida, and are currently being made in New Jersey and Louisiana, to name but a few. Medical associations participating in such activities are to be commended; the Committee and its staff stand ready to assist the state associations in a consultative capacity on request. It would also appreciate being informed of any state or county society studies undertaken; progress and final reports will be helpful to the Committee and to the other associations undertaking similar projects, since only at the local level can the community health programs be adequately appraised.

Specific Studies.—The Committee is currently engaged in four studies regarding existing programs, as well as its continuing search for new or improved solutions of these problems.

(1) **Quality and Adequacy of Care.**—Committee members began detailed studies of Public Assistance medical care in their own communities during June 1959. They are particularly interested in comparing these programs with the "Guides" adopted by the House in 1956, and especially in determining whether care provided meets "as high standards of quality and adequacy as can reasonably be made available to others in the community." Completed studies will be submitted for publication in The Journal of the A. M. A.

(2) **Medical Society Activity.**—In December 1958, the House adopted five recommendations urging specific state and county medical society activities in the indigent care field. The Committee is studying their effect in a number of states.

(3) **Prescription Costs.**—Reports for calendar year 1957 indicated that some 14% of vendor payments for Public Assistance medical care go for drugs and supplies. This is probably an underestimate of the total portion of assistance monies expended on prescriptions, since much of this cost is not met by vendor payment. Welfare departments are seriously concerned about this budget item, particularly since such costs are relatively unpredictable. The Committee is undertaking a joint study of this problem with the Medical

Care Committee of the American Public Welfare Association, with a view of evolving control mechanisms.

(4) Medical Causes of Dependency.—Disability, particularly prolonged illness, is a frequent cause for entrance on the assistance rolls. The Committee is therefore studying the reasons given for indigency, to determine the importance of illness as a causative factor, and recommend steps which the medical profession, welfare agencies, and others concerned might take to help prevent dependency.

COMMITTEE REPORTS

Indigent Care.—In the December 20, 1958, issue of THE JOURNAL of the A. M. A., the Committee published a detailed study of the changes resulting in the Public Assistance programs from the Social Security Amendments of 1958, entitled, "Medical Care for the Indigent in 1958." This report was subsequently reprinted and distributed to all state medical associations and, on request, to county societies and individuals.

Organized Home Care Programs.—In 1957 the Committee published a report covering the operation of 45 "Organized Home Care Programs in the United States." About 2,000 copies of this survey have been distributed to date. Information has since been collected on 12 additional programs, established since the original report was published, which will be included in a revised edition of the report now being prepared.

At present, some 59 home care programs are in operation in this country. Six of the 12 more recently established programs are operating in predominantly rural areas, all on a pilot study basis. There appears to be a growing trend toward experimentation in extending to rural areas both these programs and other home services, such as rehabilitation nursing, homemaker services, "meals on wheels", and the like.

The Chronic Disease Program of the U. S. Public Health Service is presently planning a survey of home care programs. Meetings are being held with this agency to exchange information and explore the possibility of a cooperative inventory and perhaps an evaluation of these programs.

RECOMMENDATIONS

There is a continually increasing acceptance, both by some governmental agencies and by segments of the general public, of the attitude that the citizen has a right to receive adequate, quality treatment of his illnesses and that it is the responsibility of the community to provide such care for the individual who cannot himself pay for it. In this context, the Council recommends again the continuous and active interest and participation of the medical profession in the whole problem of aid to the needy, including administration, eligibility, financing, and the range and quality of medical services provided.

It further *recommends study by state and county associations of the problems involved in financially catastrophic illness, with a view to evolving community programs to help finance needed treatment without requiring the normally self-supporting patient to go on public assistance rolls. This is and may remain an economic problem in medicine. Accelerated planning in this area is needed at all levels of medical organization.*

Committee on Insurance and Prepayment Plans

In the Supplementary Report of the Council at the 1958 Clinical Session it was stated that the nucleus of the new committee had been established. This was accomplished in September of 1958. Subsequently the authorized membership of nine was completed and the Committee members as reported in June 1959 remain the same. They are: Carlton E. Wertz, M.D., Chairman, Buffalo, New York; H. Russell Brown, M.D., Watertown, South Dakota; Gerald D. Dorman, M.D., New York, New York; Percy E. Hopkins, M.D., Chicago, Illinois; Quentin Kintner, M.D., Port Angeles, Washington; W. Vinson Pierce, M.D., Covington, Kentucky; T. Eric Reynolds, M.D., Oakland, California; Milford O. Rouse, M.D., Dallas, Texas; Donald Stubbs, M.D., Washington, D. C.

In addition, the Council authorized and approved a list of consultants to advise the Committee on different aspects of insurance. The consultants were identified in the progress taken along these lines by state and county medical societies, for its own information and for the information of other state and county societies.

Hometown Medical Care

In its 1957 supplementary report to the House of Delegates, the Council noted that the Committee on Federal Medical Services would "consider the possibility of sponsoring a national conference on veterans' medical care during 1958, during which time would be provided for a thorough discussion of the advantages and disadvantages of each of the three methods by their proponents." The reference committee, in a report adopted by the House, called particular attention to and endorsed the national conference proposal.

As the culmination of its two-year study of the three methods of administering Hometown Medical Care, the Committee devoted the first panel discussion at its December 1 Conference on Federal Medical Services to this subject. As a result of the study and the Conference, the Committee, at its February 7-8, 1959, meeting, *endorsed the intermediary type of program* as the most effective way of maintaining the continuity of care and the personal relationship between physician and veteran patient.

Reasons for Endorsement.—The intermediary method holds advantages both for patient and for physician. It fosters treatment of the veteran's service-connected ills by the same physician who treats his civilian ailments; it allows the veteran a wider range of choice of physician than do those agreements in which the Veterans' Administration negotiates directly with physicians. It is to the advantage of the physician to negotiate with a Federal agency through a medical society rather than directly. In fact, in many cases physicians have continued to participate in this program only because of the persuasions of medical society and intermediary personnel, thereby providing a wider choice of physician to the veteran.

However, at the time the Committee made its endorsement, it was informed that the Veterans' Administration proposed to curtail intermediary functions during the coming fiscal year to effectively eliminate much of its administrative activity. Under the proposed new contracts, the intermediary would become primarily a check-writing and professional relations agent for the Veterans' Administration, and would no longer even be informed as to the professional services for which payment was made.

Committee Actions.—The Committee's endorsement of the intermediary type of program was announced in the *A. M. A. News*, February 23, 1959, and in the Federal Medical Services *Newsletter 19*, February, 1959. The eight states (California, Colorado, Michigan, North Carolina, Oregon, South Dakota, Washington, Wisconsin) and Hawaii, which were operating under intermediary contracts, were immediately informed of the provisions of the proposed fiscal year 1960 contract and of the projected curtailments.

In the April 1959 Federal Medical Services *Newsletter 20*, the Committee published a detailed 4½-page report on the Hometown Care program, including a brief history and description of the program and a discussion of both the Veterans' Administration proposals and the Committee's position, urging the states without intermediary contracts to reevaluate their programs in the light of the Committee's findings.

On May 1, 1959, the Committee sponsored a meeting at Chicago between representatives of all state associations with intermediary contracts, and the V. A. Director of Clinics where another attempt was made to mediate the Veterans' Administration proposals.

As a result of this meeting, on May 6, 1959, Dr. Roth, as chairman of the Committee, wrote Mr. Sumner G. Whittier, Administrator of Veterans' Affairs, outlining the Committee's position and its reasons for opposing this change in intermediary contracts, and recommending:

"1. That renewal of the current intermediary contracts, without significant change, be permitted in those states which desire it, to provide an opportunity for thorough exploration of all aspects of this problem;

"2. That state medical associations with intermediary contracts be allowed to negotiate directly with the V. A. Central Office in Washington, D. C., in a manner similar to the negotiation made in reference to Medicare, instead of being forced to conduct preliminary negotiations with local or regional V. A. offices which have no final authority in respect to the contracts;

"3. That the Veterans' Administration consider seriously any requests from additional states which desire to negotiate intermediary contracts, in lieu of present non-intermediary arrangements."

The Committee regrets to report that its protests and those of the individual state medical associations concerned appear to have had little effect on the determination of the Veterans' Administration to remove all administrative responsibility from the hands of the intermediaries. Any further developments, however, will be brought to the House's attention in a supplementary report of the Council.

Recommendations.—The Council does not, by the endorsement of the intermediary system, imply any defect in the quality of care given by individual private physicians in states without such agreements. It recognizes that some associations strongly oppose any formal agreement with a Federal agency and that others feel that the program is too small in their states to render the use of an intermediary economically feasible. Yet it is of the opinion that some degree of medical responsibility for the administration of this program is essential to protect the best interests both of the patient and the physician.

It is therefore recommended *that the House of Delegates urge all state medical associations in states where Hometown Care is not provided under an intermediary contract to reevaluate their programs, taking into consideration the encouragement to continuity of care and freedom of choice through wider physician participation provided by the intermediary system.*

It is further recommended *that the House of Delegates support those state associations which at present have intermediary contracts in their opposition to curtailment of the medical profession's responsibility in the administration of these programs, which could well lead to limitations on the patients' choice of physician and consequent deterioration of the quality of care and patient acceptability of care.*

The Council wishes to call attention to a suggestion mentioned by several participants in the December 1 Conference, to the effect that the Hometown Care principle might well be extended to hospital care as well. Hometown Care, at present, provides only for outpatient treatment of service-connected disabilities, and then only when the Veterans Administration decides there is good reason to allow the veteran to be treated in his own community rather than at V. A. outpatient departments and clinics. The V. A. also hospitalizes some 3,000 of its approximately 115,000 daily patient load in non-V. A. hospitals, but again, the decision is the Veterans' Administration's, not the patient's.

The Council believes that there is a serious confusion of principle involved here. If care for *service-connected disabilities* at the expense of the nation is an earned right of the veteran, rather than a privilege—and the medical profession concurs with the Congress that it is a right—then the Council believes that the veteran with a *service-connected disability* has a *right to choose where and by whom he should be treated.* The Council therefore recommends *that veterans requiring office, home, hospital, nursing home or convalescent care for any service-connected disability should have the right to* choose between (1) *care by a private physician in a private facility at Federal expense,* or (2) *treatment in Veterans' Administration facilities, rather than that this decision should be, as at present, the prerogative of Veterans' Administration officials.*

Medical Education and Research

In June 1958, the House of Delegates adopted Resolution No. 30, recommending a suggestion to the Deans' Committees "that they restrict their activities to Veterans' Administration hospitals admitting only patients with service-connected disabilities." As the Committee noted in its supplementary report for 1958, full implementation of this resolution would imply elimination of the Deans' Committee residency and internship programs under present admission policies.

The Committee suggested that the full potential of V. A. competition with non-federal medical facilities' teaching programs should be explored, and made V. A. education and research programs one of the topics for discussion at the December 1 conference. The reference committee called particular attention to this competition, and stated "We believe this problem deserves further study by the Council on Medical Education and Hospitals and Council on Medical Service."

The Committee wishes to report, first, on the actual recommendations contained in Resolution 30, regarding restriction of Deans' Committee activities. It is appropriate here to quote from the remarks of Dr. Granville Bennett, chairman of the Committee on V. A. Medical School Relationships of the Association of American Medical Colleges, as given in the *Proceedings* of the December 1 conference (pp. 18-21).

Dr. Bennett quoted a report of his Committee from the 1954 A. A. M. C. meeting, which had never to his knowledge been superseded: "The policy of the A. A. M. C. remains unchanged in this regard; the Association's interest and responsibility are research and education. It is not the responsibility of the A. A. M. C. to determine eligibility for admission of patients to V. A. hospitals. While most citizens, including the members of the Association, do not sanction free medical and hospital service for non-service-connected cases when these veterans are able to pay, we believe it is not the prerogative of the Association to attempt to enforce measures to prevent the admission of such patients. . . . If . . . patients in V. A. hospitals were limited to service-connected veterans, the clinical cases available for education and research would be so limited in variety as to threaten seriously a residency training program. . . . If affiliation with medical schools should be terminated, this in turn would threaten the quality of care given to veteran patients because of the almost certain reduction in number and quality of staffs in V. A. hospitals."

In addition to quoting this report, Dr. Bennett also noted his belief that "Some medical schools have developed a vital need for Veterans' Administration hospitals since they have become an integral part of their undergraduate and postgraduate educational system."

It is apparent from this statement that the official representatives of the nation's medical schools are not in sympathy with the suggestion made in Resolution 30.

The Council therefore *recommends, in view of the practical difficulties of implementing this resolution, that the House consider the possibility of rescinding this recommendation.*

In view of the comparatively small size of the service-connected patient load and the difference in type between service-connected illnesses, now predominantly chronic in nature, and non-service-connected illnesses, predominantly acute, the Committee considers it open to question whether curtailment of the residency programs would seriously affect the quality of service-connected care. Dr. Allan, of the Council on Medical Education and Hospitals, speaking at the December 1 conference, stated, in fact, that if V. A. hospitals were used predominantly for chronic care and research, "such investigation programs should attract good men to V. A. hospitals and, in this respect, will improve veterans' care."

In regard to the reference committee's recommendation for further study of competition between V. A. and non-federal teaching programs, the Councils on Medical Service and on Medical Education and Hospitals have appointed representatives to a liaison committee to discuss this and other areas in which their responsibilities overlap. The first meeting of this committee was held February 6, 1959, at which time Resolution 30 was discussed. The following statement was submitted to the Council on Medical Service by C. M. E. H. representatives as that Council's position in reference to approval of residencies in V. A. hospitals:

> "The basic responsibility of the Council on Medical Education and Hospitals is to act on behalf of the American Medical Association in developing and maintaining the highest possible standards of medical education. Programs at all levels of medical education—medical school, internship, and residency—are evaluated solely on the basis of their educational worth to the students concerned. Decisions concerning the programs are not compromised by other considerations.
>
> "The Council's approval of a program signifies only that the Council believes that the program offers a sound education for the purposes which the program is designed to fulfill. Council approval of a program should not and cannot be interpreted to indicate attitudes or opinions of the Council, its individual members, or the Association of which it is a part in favor of or opposed to social, economic, political or other beliefs of the organization or institution sponsoring the program."—Statement prepared by representatives of C. M. E. H. subsequent to Liaison Committee meeting with Council on Medical Service representatives February 7, 1959.

The Council on Medical Education and Hospitals is gathering certain data on V. A. educational programs for study by the liaison group; when this material is collected, the Committee on Federal Medical Services will report further to the House concerning the scope and importance of these programs and their effect on non-federal teaching programs.

RAILROAD RETIREMENT BOARD

Early in 1959, the Committee on Federal Medical Services was requested by one of the state medical associations to investigate a complaint that the Railroad Retirement Board was paying the Veterans' Administration to conduct some of its disability rating examinations. Through personal contact with staff members of the Board and through correspondence, the Committee found that V. A. hospitals were in fact being utilized for a limited number of examinations, but that the Board would prefer to have this work done by private physicians.

Railroad employees can obtain occupational disability, determined in accordance with specific job standards, or permanent and total disability compensation. In some seventy per cent of the cases, the examinations are conducted by railway physicians, at the expense of the railroad which employs the worker. The remaining thirty per cent are examined at Board expense, and comprise mainly cases where the employer and employee disagree as to whether the employee is disabled.

Of the thiry per cent, about two-thirds are at present examined by private physicians, on the Board's list of 7,000 to 8,000 participating physicians who have agreed to accept these cases. The remaining one-third of the examinations of disputed claims are conducted by physicians in federal and state facilities, for one or more of the following reasons:

(1) The claimant is an inpatient in the facility concerned at the time of examination;
(2) The examination requires a series of tests and involves either hospitalization or consultation among a number of specialists, or both;
(3) The private physician's initial examination has failed to provide sufficient information to meet the Board's needs.

In regard to this third category, it should be noted that, since almost all claims examined at Board expense are disputed, its adjudication must be based on data sufficient to support its decision in any subsequent court hearings. Apparently a number of the examination reports received from private physicians have been incomplete or superficial, requiring reexamination of the claimant.

This year, the Board has revised its examination forms, with a view to obtaining specific answers to a number of "yes-or-no" questions. By thus more fully detailing the exact information it wants, it hopes to obtain satisfactory examination reports in a greater proportion of the cases.

Board officials expressed the hope that they would be able to make greater use of private physicians to conduct these examinations from the strictly practical point of view that in-hospital examinations delay their proceedings two to three weeks.

Committee Action.—The Committee took two steps to facilitate this utilization of private physicians, advising the Board to establish closer liaison with the individual state medical associations in order to obtain improved cooperation from private physicians, and informing the individual associations of the background of this problem and the Board's plans. It is continuing to maintain an informal liaison with the Board, so as to encourage in every way possible this laudable effort to reduce the use of the Federal hospital system for what is properly a matter for private medicine.

It is probably true, as Board officials believe, that the small size of this program may have been one cause, in the past, for inadequate reporting. The total claims expected during 1959 were about 15,000, of which about 5,000 would be examined at Board expense for a total cost of approximately $40,000. Spread over a twelve-month period and a participating list of seven or eight thousand physicians, this is obviously a very minor part of any physician's practice.

The Council on Medical Service believes, nevertheless, that this problem has an importance perhaps out of proportion to its size, in that effective participation by private physicians can arrest, on at least one front, the trend towards using Federal facilities for examinations which lie properly in the province of the private physician.

It therefore *recommends that the state medical associations and the individual physicians concerned offer every reasonable cooperation to this agency in its attempt to obtain from private physicians disability examinations adequate to its needs.*

MEDICARE

As explained in detail in the Council's 1958 supplementary report, the restrictions placed on the Medicare program in October 1958 required dependents living with a serviceman to obtain a permit to receive civilian treatment at government expense and stipulated that certain non-emergency and out-patient services from civilian physicians and facilities would not be eligible for payment. At the December 1958 session of the House of Delegates, the House adopted a reference committee report urging "the re-establishment of services under the free choice principle, to accomplish the original intent of the Act."

From discussion at the December 1, 1958 Conference on Federal Medical Services, the Committee concludes that the permits referred to above are designed not merely to reduce program cost by optimum utilization of military facilities, but also to maintain a sufficient patient load for educational purposes and to provide for rapid expansion of military medical facilities in local or national emergencies. Regardless of the strength of arguments for military residency and internship programs, the Committee feels that the claimed need to keep military facilities to optimum strength for rapid expansion will probably counteract any attempt to revoke the permit system in the near future.

However, the second restriction on freedom of choice may be ameliorated, since program officials are reported to be studying ways of restoring some out-patient service and plannable surgery by civilian physicians, within program budget limits. No definite decision has, as yet, been reached.

The Committee has established direct liaison with the Office of Dependents' Medical Care, and members have met with ODMC staff several times during 1959. The Committee feels this liaison can be useful to the profession in clarifying administrative problems and improving the program, particularly if state associations will report to the Committee any problems which do not appear susceptible of solution at the state level.

NEGOTIATIONS WITH FEDERAL AGENCIES

In this connection, the Council feels it appropriate to point out that an increasing number of Federal agencies are entering into negotiations with state medical associations in regard to payment for private medical care. Since these agreements are negotiated by different Federal agencies, and frequently with different committees within the associations, two Federal programs may have different fees for the same procedure in the same state.

This has been mentioned a number of times in Congress during the past year, particularly in regard to the disparity of fees between Medicare and the V. A. Hometown Care program; Medicare fees, it was brought out at appropriation hearings, were higher than V. A. fees in a number of areas.

As a result, several legislators have suggested that all such agreements be negotiated for all Federal programs by a single agency of the government. While no bills have been introduced in this session of Congress to implement this suggestion, continued utilization of the services of private physicians by the Veterans' Administration, the Railroad Retirement Board, Medicare, the Division of Indian Health of the Public Health Service makes it likely that this suggestion will continue to be explored.

While the American Medical Association has, in the past, agreed that Federal medical programs should be coordinated to avoid duplication and overlapping of functions and facilities, the Council considers the value of a single "purchasing agent" for civilian medical services questionable; such an attempt to standardize fees might well lead to more problems than it would solve.

The Council will continue to explore the possibilities of this proposal. In the meantime, it suggests *that each state medical association which has not already done so consolidate under one committee all responsibility for negotiating with governmental agencies for the private care of patients for whom the government assumes responsibility*. Such a mechanism, the Council believes, would not only help to avoid criticism based on widely divergent fees for similar services to different groups of Federal patients, but would also strengthen the association's position by providing a uniformity of approach to all governmental programs.

INDIAN HEALTH SERVICES

The Council is pleased to report significant improvements in the health of the American Indian population. According to the most recent reports, during the time this portion of the population has been under the care of the Division of Indian Health of the Public Health Service, beginning with 1955, the tuberculosis death rate has dropped some 40 per cent, the infant death rate has dropped 12 per cent, and the death rate from gastro-enteric diseases was reduced by 26 per cent.

The disease picture for the Indian is still worse than that for the total United States population. In 1957, for example, the tuberculosis death rate for Indians, excluding Alaskan natives, was 29.8 per 100,000, about four times as high as the 7.5 per 100,000 rate for all the population; the incidence of TB per 100,000 persons was 426.9 for Indians, against 51.4 for the whole population. Infant death rates for Indians were about double those for all races—57.0 deaths per 1,000 live births against 26.3.

The mortality by age groups in 1957 also indicates much progress to be made in Indian health: 23% of Indian deaths occur during the first year of life, and 34% under the age of 20, compared to 7% of deaths for all races in the first year, and 10% under 20. Of the total population, 57% are at least 65 when they die; only 27% of the Indian deaths are past this age.

However, the Division of Indian Health is continuing to make progress in bringing Indian health to the level of the general population. Hospital births and outpatient visits have increased appreciably, the number of physicians and dental staff members has been nearly doubled and public health nurses have increased nearly one-third. Indians are being trained in the various ancillary services, to assist in improving their people's health. Twelve of the Indian hospitals out of a total of 54 are now accredited, 5 since the transfer to the Public Health Service, and the new 75-bed hospital at Shiprock is expected to be completed by the end of 1959.

Much remains to be done, but particular mention should be made of the steps taken to integrate Indian care with that of the general community, which may well be one of the most decisive measures taken to improve Indian health. In addition to the increase in funds expended for care in private facilities or provided by private practitioners from $5 million in 1955 to $8 million in 1958, the Public Health Service is participating in the cost of construction of 7 community hospitals, located in the vicinity of Indian tribal areas, which will be used for the care both of Indians and non-Indian residents of the community. Public Health Service participation is based on the expected amount of use by Indian patients.

The Public Health Service is to be commended for this continuing effort to initiate its Indian patients into the private system of medical care. This cooperation between governmental and private medical personnel and facilities is undoubtedly the most effective method of improving the health of the Indian population.

COMMITTEE PUBLICATIONS

In the period from July 1958 to June 1959, four issues of the Federal Medical Services *Newsletter* were published. Among the major items reported were the complete text of Dr. Roth's testimony before the House Committee on Veterans' Affairs in regard to the A. M. A. policy on veterans' medical care, a synopsis of the discussion at the December 1 conference, an analysis of the President's policy statement on veterans' hospitalization released February 26, 1959, a detailed report on Hometown Care, and the text of Dr. Roth's letter to Mr. Whittier on Hometown Care.

Prior to 1959, this Newsletter was sent not only to members of state association veterans' affairs committees and others who had requested it, but also to those on the mailing list for the *Secretary's Letter* of the A. M. A. With the commencement of publication of the A. M. A. *News*, the *Secretary's Letter* was discontinued; those on this list were therefore requested in the October-November issue of the *Newsletter* to inform the Committee if they wished to continue receiving it. In view of the fact that no return card or application blank was enclosed with this announcement, the Committee considers it gratifying that over a hundred individuals, not members of veterans' affairs committees, wrote requesting that their names be continued on the list.

Early in 1957, the Committee published a factbook concerning "AMA Policy on Medical Care of Veterans", presenting, in question-and-answer form, the Association's policy, the reasons for this policy, and relevant statistical material about the V. A. hospital system. In reviewing this factbook, the Committee concluded that "there has been no change, and no reason for change" in the medical profession's policy and that, therefore, the question-and-answer portion of the factbook was still correct. However, to bring the statistical data up to date, the Committee published an addendum, designed to fit inside the original factbook, bringing the material on hospital utilization, costs, and analysis of the veteran population in line with the latest information available as of June 30, 1958. This *Addendum* has been sent to all those on the *Newsletter* mailing list, and has been included with all copies of the factbook sent out during the July 1958-June 1959 period.

As announced in its supplementary report to the House of Delegates in December 1958, the Committee also designed three brief leaflets on veterans' medical care for general distribution. "What About the Veteran's Family?" compares the care provided for veterans and for their wives, children, and friends; "The Cost of Free Veterans' Care" discusses the cost to the veteran of his supposedly free treatment; and "How to Cut Your Medical Bill" compares the cost of care in V. A. and non-Federal facilities.

The first release of these leaflets was to the participants in the December 1 Conference on Federal Medical Services; copies were also made available to the members of the House of Delegates at the Minneapolis meeting. Following this initial release, single copies of the three leaflets were sent to those on the *Newsletter* mailing list and to state association secretaries.

After these introductory mailings, copies of the leaflets were sent out only on request. It is therefore strong evidence of the interest shown in this subject that the first printing was used up within three months and that, during the seven months since the leaflets were introduced, well over 30 thousand of each have been distributed.

The Committee feels that continued distribution of these leaflets will do much to bring about a climate of public interest and understanding of the medical profession's policies regarding veterans' medical care. It is exploring the possibility of additional public information material on this problem.

Committee on Aging

This Committee has had three membership changes during the year: Doctor Wingate M. Johnson, Winston-Salem, North Carolina was replaced by Doctor Edward H. Williams, Miami, Florida; Doctor Hoyt B. Woolley, Idaho Falls, Idaho, was named as the Council representative; Doctor J. Lafe Ludwig, Chairman of the Council on Medical Service, became an ex officio member. Other members are: Drs. Frederick C. Swartz, Chairman, Lansing, Michigan; David B. Allman, Atlantic City, New Jersey; Henry A. Holle, Staten Island, New York; Theodore G. Klumpp, New York City; Henry B. Mulholland, Charlottesville, Virginia; and Cecil Wittson, Omaha, Nebraska. Doctor Edward L. Bortz, Philadelphia, Pennsylvania, has resigned his active status with the Committee, but continues as a consultant. Doctor Gunnar Gundersen, LaCrosse, Wisconsin, was invited to become a member of the Committee, June, 1959, and has accepted.

MEETINGS

The Committee has held five regular and two special meetings. Regular Committee meetings were held in Chicago, September 12-14 (concurrently with the Planning Conference on Medical Society Action in Aging), in Minneapolis, December 4-5; in Washington, D. C., January 25; in Salt Lake City, May 9, and in Washington, D. C., June 16. Two special meetings were held: one in Minneapolis, December 5, with the Committee on Medical and Related Facilities to discuss "Guides for Medical Care in Nursing Homes and Related Facilities" (cf. Committee on Medical and Related Facilities—this report); and the other in Washington, D. C., January 24, with representatives of various Federal departments and national organizations demonstrating special interest in aging, and representatives of state committees on aging, to exchange information on current programs and projects.

TRENDS IN ACTIVITIES ON AGING

It is evident that, for a variety of motives, increasing attention is being given to the older population and to aging. This observation is applicable not only to government, but also to non-governmental activities.

Congress has shown its interest in a variety of ways. The number of bills introduced with special provisions for older persons has grown rapidly in recent years and may be expected to continue to rise. Passage of the Fogarty bill, calling for a White House Conference in 1961, and appropriations of funds to the states for pre-conference activities, is the major action to date. Twice in the past two years the House of Representatives' Ways and Means Committee has held public hearings on the Forand bill, a proposal which provides that restricted compulsory health insurance be created for all Old Age and Survivors Insurance Beneficiaries under Social Security. The Senate Labor and Public Welfare Committee has created a sub-committee on Problems of the Aged and Aging under the chairmanship of Senator Patrick V. McNamara. This subcommittee plans extensive hearings both in Washington and in other major cities throughout the nation. The chairman of the A. M. A. Committee on Aging participated in the initial hearings of this subcommittee held in Washington, June 16-18.

Every executive department of the federal government is engaged in activities carrying special implications for the older person. The Department of Health, Education, and Welfare is deeply involved. Of special importance is its Special Staff on Aging; this staff collects information on activities in the field of aging and disseminates this information in a monthly publication, "AGING"; its other functions include direction of staff details for the White House Conference on Aging.

State governments are directing increased attention to aging. Thirty-nine states now have official commissions, councils, or committees on aging, either through executive or legislative action. This growth has been partly stimulated by the coming White House Conference, but over 30 states had such special agencies prior to passage of the authorizing act.

Numerous national organizations, with widely varied interests, have entered or are entering the field of aging with new emphasis. Typical of these are the American Hospital Association, National Social Welfare Assembly, the American Public Health and Welfare Association, National Health Council, many national church organizations, federated women's groups, the American Nursing Home Association, National Committee on Homemaker Service, and the Council on State Governments.

At the local level, an increasing number of community councils on aging are being created and special projects, both study and action, are being undertaken.

Because health receives so much emphasis in all of these activities, it is imperative that the medical profession provide its special knowledge to such programs and vigorously make its leadership felt at national, state, and local levels. This it is doing.

It is perhaps significant, and hopefully so, that non-medical groups active in the field of aging are turning to medical society committees for guidance. No group, professonal or non-professional, has surpassed medicine in its interest and activities in meeting the needs for individual citizens created by reason of age.

The American Medical Association's program on behalf of older persons has been repeatedly pointed to by non-medical specialists in the field of aging as a "model". This reputation has been achieved only because of outstanding leadership in the state and county medical societies. If it is to be maintained, such leadership must continue to grow.

COMMITTEES ON AGING—STATE MEDICAL ASSOCIATIONS

In the last annual report, 33 state medical associations were reported as having committees on aging. Now, 48 state medical associations have actively functioning committees. Close liaison is being maintained with these state committees in pre-conference activities for the 1961 White House Conference on Aging (cf. White House Conference, this report), in reference to plans by the Senate Subcommittee on Aging for hearings in selected cities, in planning for the A. M. A. regional conferences on aging, and in state programs being undertaken. Several of the state associations have held or planned conferences for county medical society action similar to the A. M. A. conference of September, 1958.

REGIONAL CONFERENCE ON AGING

As a result of the 1958 A. M. A. Planning Conference on Medical Society Action in the Field of Aging and to supplement the series of regional meetings for medical society representatives, a new series of nine Regional Conferences on Aging has been undertaken. These Conferences are being directed toward lay groups interested in aging. The first of these Conferences, held in Salt Lake City, May 8-9, was co-sponsored by the A. M. A. and the state medical societies of Arizona, Wyoming, Utah, New Mexico, Montana, Idaho, Nevada, and Colorado. This Conference was attended by approximately 300 people representing more than 40 local and national organizations. Participants included representation from agriculture, industry, labor, churches, schools, government, women's groups, service clubs, retired persons' organizations, communications media, and civic planning groups. Emphasis throughout the program was given to the social, economic, and vocational factors which contribute to good health and meaningful living among the aging and to exploring ways in which opportunities for health and full living could be expanded by individuals, groups, and the community. Individual speakers, panels, and symposia discussed such topics as the problems of employment and compulsory retirement; financing of health care; "group responsibility;" the coming 1961 White House Conference on Aging; new trends in health care such as home care programs, homemaker services, "progressive care" experiments, and rehabilitation in nursing homes; and the importance of individual preparation for later years. Conference proceedings of the Salt Lake City meeting have been reproduced in limited quantity.

The second in this series of regional conferences will be held in Boston, on September 16-17, in cooperation with the state medical associations of Connecticut, Maine, Vermont, New Hampshire, Rhode Island, New York and Massachusetts. Seven similar meetings will be held in the subsequent six months. In 1959, meetings will be held in Minneapolis, October 14-15, for the states of Iowa, Wisconsin, North Dakota, South Dakota, and Minnesota; in Cleveland, October 28-29, for the states of Ohio, Michigan, Indiana, Pennsylvania, and Kentucky; and in Kansas City, November 16-17, for the states of Missouri, Kansas, Oklahoma, Illinois, and Nebraska. After the first of the year, meetings will be held in New Orleans, San Francisco, Atlanta, and Baltimore which will include all of the remaining states. While these conferences will be patterned after the one in Salt Lake City, the program format of each will be oriented to the particular region.

HEALTH APPRAISAL FORM

The Periodic Health Appraisal Form, described in the Report of the Council's 1958 Clinical Session, has been distributed to chairmen of state committees on aging with a letter which explains the Committee's philosophy and reasons for developing this form, and requesting comments and suggestions. This form is designed to elicit not only a medical history and a picture of present physical condition, but also information on the patient's daily living habits from the standpoint of nutrition, occupation, exercise and rest, and socio-psychological environment. The form is not offered as a rigid recommendation, but is an effort to encourage some degree of uniformity among health appraisals. It is hoped that it will stimulate increased physician participation in a program of periodic health appraisals as an essential part of health maintenance programs for their patients.

SCIENTIFIC PROGRAM

A special one day session on *New Concepts on Aging* was held during the Annual Session in Atlantic City, June 8-12. This session, attended by over 200 people, was designed to present the practicing physician with a concentrated view report submitted to the House at the 1959 Annual Session. Also that report indicated that the consultants had agreed to serve.

MEETINGS

During the period between the Committee organization and June 30, 1959, the Committee held four scheduled meetings. Two were held in connection with the Regional Conferences which the Committee sponsored. These Regional Conferences were reported to the House last June. Also, during the period covered by this report, the Committee held two informal meetings in connection with the 1958 Clinical and 1959 Annual Sessions of the House. In addition to these formal and informal meetings the Committee has met with the Medical Relations Committee of the Health Insurance Council and with representatives of Casualty Claims Officials.

The Committee has not limited its activities to its own scheduled meetings but has assisted in as well as been represented at other meetings which have dealt with topics within the scope of its broad interests. For example, the 10th Councillor District (Pennsylvania) desired to confer with representatives of 23 county medical societies in 12 different states in which counties 10,000 or more steelworkers were employed. Such a meeting was held in Pittsburgh on June 24 and was attended by representatives of these county societies as well as by representatives of Blue Shield, Blue Cross, The Hospital Council of Western Pennsylvania, the Health Insurance Council and the United Steelworkers. The Committee and Council were represented at that conference and the staff assisted in the general arrangements.

A further activity which is being considered is a joint meeting with the new Medical Disciplinary Committee created by the Board of Trustees. It is believed that this will result in each Committee complementing the activities of the other and at the same time will minimize any unnecessary duplication of effort.

VOLUNTARY HEALTH INSURANCE

Total enrollment under health insurance increased during 1958 in spite of the "recession" which was evidenced in several parts of the country. With respect to surgical expense benefits, the growth during 1958 for medical society plans, including Blue Shield as well as Blue Cross coordinated programs amounted to a net increase of 1,328,745 subscribers. When considering all types of insuring organizations, net increases were reflected in enrollment figures for Blue Shield and insurance companies with a slight decrease in the number enrolled by the independent plans. The net enrollment growth under all categories of plans for surgical expense benefits was approximately 3,504,000.

Comparative total enrollment as of December 31, 1958 and the corresponding total for the preceding year end by category of benefit was as follows: hospitalization—123,038,000 over 121,432,000; surgical expense—111,435,000 against 103,931,000 and medical expense 75,395,000 contrasted with 71,813,000.

The greatest enrollment growth both from the standpoint of percentage gain and numbers of persons involved was recorded for major hospital and medical expense benefits or "catastrophe" coverage. The number so insured at the end of 1958 was 17,375,000 compared with 13,262,000 or a net increase of 4,113,000. This category of benefit is written largely by insurance carriers although several Blue Shield and some Blue Cross plans make this type coverage available and others are considering it.

Table I which follows portrays the substance of the statistical summaries contained in the 13th Annual Survey of the Health Insurance Council. It reflects the gross and net figures not only by category of coverage but by type of insuring organization.

As might be expected, the numerical and percentage increases are less dramatic than in previous years. This is due to the fact that the majority of persons who are eligible for insurance on a group basis has largely been enrolled and the growth in the future will be among those who are either self-employed or employed by concerns having relatively few employees.

The effectiveness of health insurance in assisting in paying for health care is increasing. This means that the scope of benefits as well as amounts of benefit allowances, in the aggregate, are increasing more rapidly than the number of persons insured.

Table I—*Distribution of Hospital, Surgical and Regular Medical Expense Coverage by Type of Insuring Organization, December 31, 1958.*

Type of Insuring Organization	Number of People Protected: Hospital Expense (000 Omitted)	Surgical Expense	Regular Medical Expense
INSURANCE COMPANIES:			
Group Insurance	49,508	49,917	29,868
Individual-Policy Insurance	29,372	25,819	7,869
Unadjusted Total	78,880	75,736	37,737
Deduction for Duplication* in Persons with Insurance-Company Protection	7,032	6,611	2,595
Net Total for Insurance Companies	71,798	69,125	35,142
BLUE CROSS, BLUE SHIELD† AND MEDICAL SOCIETY PLANS:	55,205	46,424	38,860
INDEPENDENT PLANS:			
Industrial Plans	3,065	3,017	2,863
Community Plans	628	1,259	1,243
[illegible]	153	227	192
[illegible]	619	769	817
[illegible]	400	300	900
Total for Independent Plans	4,865	5,572	6,015
Deduction for Duplication: Persons Protected by More Than One Type of Insuring Organization‡	8,830	9,686	4,622
NET TOTAL, PERSONS PROTECTED	123,038	111,435	75,395

* Number indicates those who may carry insurance with more than one company.

† Includes some plans which may not be medical-society approved; hence the variance between the HIC figure and the AMA figure as shown previously.

‡ Estimated number of persons who carry both insurance company and Blue Shield-Blue Cross or similar contracts.

Table II indicates the amounts paid toward various types of health care expenses by category of insurer during the calendar year 1958.

The Committee contributed to the Annual Survey of the Health Insurance Council as did Blue Shield Medical Care Plans, the Blue Cross Commission and other sources in developing the total data. The figures in Table II also were extracted from the Health Insurance Council survey.

COVERAGE FOR THE AGED

At the June meeting the Council submitted a Progress Report on Coverage for the Aged. It merely summarized some of the specific activities of medical associations, Blue Shield and Blue Cross Plans as well as insurance companies and associations which were deemed to be in keeping with the intent of Supplementary H of the Council which was adopted by the House during the Minneapolis meeting. The June, 1959, Progress Report mentioned further that the Council had approved a recommendation of the Committee on Insurance and Prepayment Plans to extend the principle of Supplementary H irrespective of insurance and if insurance is involved, it should be without regard to type.

Table II—*Voluntary Health Insurance Benefits Paid*

Type of Benefit	Type of Insuring Organization: Blue Shield Blue Cross	Insurance Companies	Independent	Total
HOSPITAL EXPENSE	$1,303,000,000	$1,186,000,000	$100,000,000	$2,589,000,000
SURGICAL AND MEDICAL EXPENSE	531,000,000	623,000,000	140,000,000	1,294,000,000
TOTAL	$1,834,000,000	$1,809,000,000	$240,000,000	$3,883,000,000

An up-to-date resume of activities of constituent associations, component societies, local plans and other insuring organizations in following through on the action of the House will be submitted in a Supplementary Report to the House at the Clinical Session.

SIMPLIFIED CLAIM FORMS

There is continuing interest in the subject of simplified claim forms for reporting medical information to insurance companies and plans. Claim forms of varying format and length have been a source of annoyance to practitioners. The six simplified claim forms developed by a special committee of the Health Insurance Council and approved by the Council on Medical Service have received wide distribution. In an effort to make this program known to all interested parties the Health Insurance Council prepared a special brochure captioned, "A Report to the Physician," which explains the use of each of these forms. In addition to the mass distribution of these pamphlets undertaken by the Health Insurance Council the office of the Council on Medical Service has mailed out an impressive number in reponse to individual requests from physicians.

It is also considered to be of interest to the profession that efforts are continuing to further simplify these reporting forms in order to reduce the time required to provide information essential to claims administration.

"LET'S USE, NOT ABUSE" AND "SUGGESTED GUIDES" FOR MEDICAL SOCIETY-SPONSORED VOLUNTARY PREPAYMENT MEDICAL BENEFIT PLANS

In closing this portion of the report, the Council and its Committee on Insurance and Prepayment Plans would like to recall to the attention of the House two statements it adopted during the 1958 Clinical Session in Minneapolis. Further, it is the opinion of the Council and Committee that the importance of the statement, "Let's Use, Not Abuse," and the suggested guides should be emphasized repeatedly to the medical profession and others who share the responsibility for the success of health insurance programs and prepayment plans.

The statement, "Let's Use, Not Abuse," was developed with an awareness of the frequent and constant increases in hospital charges plus acknowledgment of the respective responsibilities of individual physicians, the policy holders or subscribers, the insurance companies and prepayment plans and the hospitals. In group coverages underwritten through employers or unions, both unions and management also have appropriate responsibilities.

Although the statement "Let's Use, Not Abuse" has received rather wide distribution among the profession, including publication in the A. M. A. News, it is felt there should be repeated emphasis of the basic tenets if health insurance and prepayment mechanisms are to fulfill their potentials in assisting to finance health care. Accordingly, it is planned to reprint this statement in leaflet form in order to accomplish the widest possible distribution.

Finally, much of the same can be said regarding the "Suggested Guides" since in a number of instances medical society approved plans set the competitive pattern of benefits in their respective areas and thereby influence, to a degree, benefits offered by other organizations.

Committee on Maternal and Child Care

The members of this Committee are: Drs. Philip S. Barba, Chairman, Philadelphia, Pennsylvania; R. B. Chrisman, Jr., Coral Gables, Florida; W. L. Crawford, Rockford, Illinois; James F. Donnelly, Winston-Salem, North Carolina; Harold S. Morgan, Lincoln, Nebraska; Garland D. Murphy, El Dorado, Arkansas; Howard A. Nelson, Greenwood, Mississippi. Committee consultants are: Drs. Donald A. Dukelow, Chicago, Illinois, and Philip F. Williams, Philadelphia, Pennsylvania, and Mr. Edwin J. Holman, Chicago, Illinois. Two changes occurred in the Committee membership this year: Doctor Barba became the new chairman and Doctor Donnelly was the newly appointed member of the Committee replacing Doctor Reichert.

MEETINGS

The Committee held three meetings during the year. The first meeting, July 26-27, was devoted primarily to *"Perinatal Mortality and Morbidity Study Programs"*. The following groups were represented at this meeting: The American Academy of General Practice; The American Academy of Pediatrics; The American Association for Maternal and Infant Health; The American College of Obstetricians and Gynecologists; The American Hospital Association; The American Public Health Association; The American Society of Anesthesiologists; The Association of State Maternal and Child Health and Crippled Children Directors; The Children's Bureau; The College of American Pathologists; The Human Embryology and Development Study Section of the National Institute of Health, and the National Institute of Neurological Diseases and Blindness. These groups were called in to discuss and try to arrive at an agreement on specific terminology, definitions, and procedures that could be used as a basis for program planning on the part of various sized states, cities, and hospitals in their organized effort to reduce perinatal mortality and morbidity. The agreements reached at this Joint Conference, in addition to the majority opinions obtained at the two previous regional conferences (referred to in last year's annual report), were the basis for many of the recommendations that were subsequently included in the "Guide for the Study of Perinatal Mortality and Morbidity".

The November 8, 9, and 10 meeting was held in Washington, D. C. in order that liaison could be more firmly established with and consultation obtained from the government agencies concerned with the problems on which the Committee was working. The first draft of the "Guide for the Study of Perinatal Mortality and Morbidity" was carefully reviewed by the Committee and in consultation with representatives of the Children's Bureau, the National Institute of Neurological Diseases and Blindness, and the National Office of Vital Statistics (and the U. S. National Committee on Vital and Health Statistics). The Committee received from Dr. Richard D. Masland a detailed report of the National Collaborative Project, of which he is the Director. The interrelationships between, and the need for close work with, the Committee's endeavor and this research project of the N.I.N.D.B. were mutually agreed upon.

The third meeting of the Committee was held on April 11-12 in Oklahoma City. One day of this meeting, April 11, was devoted to a joint or regional meeting with medical society and health department representatives from eight states of this south-southwest area. The Committee acquainted the 34 participants in this meeting with what it has been doing on both maternal and newborn (and fetal) problems with special emphasis on the perinatal period. The Committee's new guide booklet for perinatal studies was presented, and the Committee's proposed "Supplement" to its "Guide" was discussed. The problem of adequate hospital and other records was emphasized and the Committee was asked to develop forms and lead an educational program to promote widespread utilization by individual doctors and hospitals.

PERINATAL STUDY PROJECT

A major objective of the Committee in its perinatal study project was the development of a booklet for distribution to state and local medical societies and health departments and individual hospitals for their use in promoting the establishment of and/or encouraging present programs designed to reduce perinatal mortality and morbidity. A 31-page booklet, "A Guide for the Study of Perinatal Mortality and Morbidity", was published in April of this year. This "Guide" is a basic program which allows for a great deal of flexibility in organization and operation of studies, but emphasizes the need to follow closely the concept of uniform terminology and uniform reporting of data. The objective of perinatal mortality and morbidity studies, as stated in the "Guide" booklet, ". . . . is to improve the production of normal human beings. The elimination of deaths and damage during the process of reproduction is the ideal for which we should strive. . . ." The "Guide" received the endorsement of the 12 organizations and agencies who participated in its development.

A "Supplement" to this "Guide" is now being prepared. It will contain forms and other materials that should more easily facilitate the initiation of new programs of study and promote a greater degree of uniformity.

PUBLICITY

In order to stimulate thought and action on perinatal problems several means have been utilized.

The editorial in the June 28, 1958, J. A. M. A. introduced a series of five articles on specific Perinatal Mortality and Morbidity Programs in the United States. These articles appeared in the following issues of The J. A. M. A.: June 28, July 5, July 19, July 26, and August 2, 1958. Reprints of the above editorial and series of articles, along with copies of the Philadelphia and Chicago Regional Conference Reports, and a leaflet containing the contents of the Committee's Exhibit on Perinatal Mortality and Morbidity were sent to state and county medical society executives and secretaries of interested national organizations.

The Committee's Exhibit on Perinatal Mortality and Morbidity was among the scientific exhibits at the annual meetings of the American College of Obstetricians and Gynecologists and the American Medical Association in Atlantic City in April and June respectively. Both the maternal and perinatal guide booklets were distributed to visitors of these exhibits as were other pertinent materials.

Committee members have been asked to participate in medical society and public health association sponsored meetings on several occasions this past year. Preparations are being made for similar responses to invitations for fall meetings.

FUTURE ACTIVITIES

The Committee on Maternal and Child Care believes that its present work and emphasis on the problems of the perinatal period is fundamental to continuing progress toward better health and well being of our future generations. Much progress has been made in reduction of maternal deaths and in reduction of infant deaths after the first month. But, as presented by the series of charts in its Exhibit, the Committee points out a contrast: the relatively small reduction over the same period, of deaths of newborn infants under one month and especially under seven days.

Doctor George W. Anderson, one of the leading scientific investigators in this field, has chosen to use the term "human reproductive failure" to encompass the loss of the products of conception at any stage before maturity. He has estimated this loss as over 800,000 per year (based on U. S. Vital Statistics for 1950). This ranks above any of the leading causes of death in the United States. Included in the total reproductive loss, too, are those cases of morbidity (neuropsychiatric disabilities such as cerebral palsy, epilepsy, and mental retardation and other congenital defects), many of which are more tragic than death itself.

The A. M. A. through its Committee on Maternal and Child Care and in cooperation with other organizations and agencies, both governmental and voluntary, has established the necessary groundwork for a nationwide, organized effort that should assist in solving many of the problems of the perinatal period. Action is necessary if the slowly decreasing mortality rate of infants is to be accelerated and, in fact, if the rate is not to increase as it did in 1958.

The Committee would urge greater consideration for these problems in order that human reproductive casualties be prevented to as great an extent as possible. These problems will be increasing as our population increases if vigorous and concerted efforts are not made. The 1955 population of children under 15 years of age was 48,800,000. In 1957, it was 52,000,000, and if the present rate of increase continues, the Bureau of the Census has estimated that by 1970 the population of children under 15 years will be 67,000,000.

By way of placing a perspective on the present and future problems facing the nation, it should be noted that in 1955 the population of those 65 years and over was 14,000,000. This had increased to 14,700,000 by 1957 and if present trends continue, will be 19,500,000 by 1970. It can be seen that the expected increase in both age groups is approximately the same—37% and 39% respectively. Experience has shown that planning and trying to look into the future for ways and means of meeting problems before they arise, is essential for every age group.

Committee on Medical Care for Industrial Workers

The members of this Committee are: Drs. Frank J. Holroyd*, Chairman, Princeton, West Virginia; T. J. Danaher*, Torrington, Connecticut; Edwin P. Jordan*, Charlottesville, Virginia; Melvin N. Newquist#, West Cornwall, Connecticut; Leo Price#, New York City, New York; William A. Sawyer#, Rochester, New York; Frederick W. Slobe#, Chicago, Illinois, and Clyde C. Sparks*, Ashland, Kentucky. Consultants are Dr. Donald A. Dukelow and Mr. Edwin J. Holman, Chicago.

*Appointed by Council on Medical Service

#Appointed by Board of Trustees upon recommendation of Council on Industrial Health

COMPULSORY TEMPORARY DISABILITY INSURANCE PROGRAMS

In the latter part of 1958, the Committee issued and distributed a publication consisting of five articles describing the statutory cash sickness disability programs of California, New Jersey, New York, Rhode Island, and the Railroad Retirement Board. These articles, based upon an outline developed by the Committee, were prepared by officers of the various agencies concerned. They deal with the historical development of each of the programs, eligibility aspects, program benefits, program administration and financing, and important statistical data of interest to physicians. A section in each of the articles deals specifically with the role of the medical profession in each of the programs.

Although no temporary disability insurance programs have been instituted since 1949, proposals for such legislation have been advanced in a number of states. The Committee will continue to follow any developments that occur and report periodically on them.

HEALTH AND INSURANCE PLANS UNDER COLLECTIVE BARGAINING

The Committee has published *A Summary Report on: Health and Insurance Plans under Collective Bargaining, Late 1955* mentioned in its last annual report. This summary report, widely distributed among medical societies, contains data relating to the provision of hospital, surgical and medical benefits in 300 plans which cover approximately five million workers, or about 40 percent of the total number of employees estimated to have been covered by health insurance plans under collective bargaining as of the end of 1955. Based upon a more detailed study of the Bureau of Labor Statistics, this publication has apparently proved helpful to physicians and medical societies interested in various types of coverage and provisions of collective bargaining agreements.

A PRELIMINARY GUIDE FOR MEASURING WORK ABSENCE DUE TO ILLNESS AND INJURY

This publication contains a number of definitions and formulae on the basis of which a uniform set of statistics can be developed by physicians and others who are concerned with the problem of work absence. This Guide has been published and has received wide distribution and publicity. This and several other publications dealing with the subject of absence from work round out the basic information physicians should have in studying the problem. J. A. M. A. has also published an article by the Committee entitled "Abstracts on Absence from Work and its Relation to Private Practice," which outlines some of the basic aspects of this problem, particularly those of interest to the physician in private practice in his relations with the physician in occupational medicine. The Committee hopes that physicians who provide services to small plants and establishments will be encouraged to follow this Guide in collecting data on the frequency and duration of absence from work.

PILOT STUDY ON HIRING PRACTICES OF OLDER WORKERS AND HANDICAPPED IN INDUSTRY; THE ROLE OF THE MEDICAL DIRECTOR IN ADVISING MANAGEMENT ON HEALTH INSURANCE

A pilot study designed to secure information on three matters of interest to the Committee was conducted in February, 1959, during the Annual Congress on Industrial Health. The Committee's questionnaire sought to inquire into industry practices in the hiring and retirement of older workers; policy in the employment of handicapped workers; and the role of medical directors of occupational health programs in advising management on health insurance coverage. Although the results of the survey are not to be considered conclusive or representative of practices in industry, they do reveal the existence of policy which limits the employment of older workers and which dictates the retirement of workers at age 65 or earlier.

A more enlightened attitude was revealed with regard to the employment of handicapped workers in that the majority of companies indicated that the physical and mental abilities of the individual were matched with the physical and mental demands of the job. Half of the medical directors reported that their advice was sought by management in matters concerning health insurance benefits for employees and in collective bargaining. Over 60 per cent of the medical directors of occupational health programs indicated that they assumed varying degrees of responsibility in the administration of health insurance programs and benefits.

The data secured in this pilot study has been made available to other committees of the A. M. A. interested in various aspects of this pilot survey, and the Committee will assist in the collection of additional data and information requested by these committees.

SURVEY OF PHYSICIANS' SERVICES PROVIDED TO SMALL PLANT OCCUPATIONAL HEALTH PROGRAMS

The Committee has completed its study of physicians' services provided to small plant occupational health programs. For the purpose of the survey, "small plants" were defined as those employing fewer than 500 employees. The objectives of the study were to explore, on a pilot basis, the validity of the opinions held by the Committee that: (1) physicians in private practice are, to some extent, already providing such occupational health services, (2) this experience can be used by other physicians as examples of what services and programs can be offered, and (3) thousands of additional physicians, if they were aware of the nature of the programs and the roles they can assume in supervising them, could be encouraged to take a greater interest in the development and expansion of such services to the overwhelming majority of small plants which do not presently make such programs available to their employees.

As of the beginning of 1959 some 99 per cent of all plants, employing approximately 80 per cent of the labor force, could be classified as small establishments. It was the opinion of the Committee that a full-scale attack on the problem of instituting such programs required a re-examination of the problem and an appraisal of the methods and techniques through which such services could be made available. The results of the survey confirm the Committee's belief that the physician in private practice can rightfully assume his full and proper role in the supervision and administration of such programs. Whether the physician practices by himself or as part of a group, the survey findings reveal that he can provide to employees in small establishments all or most of the services recommended in the "Statement on Scope, Objectives and Functions of Occupational Health Programs" adopted by the House of Delegates in June, 1957.

In its report to the Council on Industrial Health, the Committee observes that the physician, to serve an industry, must have knowledge of the working environment, the physical and mental demands it makes upon workers, and the physical and mental fitness for work of the employee or applicant. The physician in private practice, if he is aware of the special problems in small establishments, and interested in enlarging the scope of his practice, can supervise and administer an occupational health program for a small group of employees in an office or in an industrial establishment.

The report, which contains data gathered from replies from 200 physicians in private practice, has been submitted to the Council on Industrial Health for its information. Its publication, which is expected in the near future, will represent a contribution toward the solution of a problem which has received considerable attention over the past few years.

1958 SURVEY OF UNION HEALTH CENTERS

This survey was completed, and a publication entitled *A Survey of Union Health Centers, 1958* was released in the early part of the year. It contains descriptions of 29 health centers covering such items as (1) history, (2) membership, (3) objectives of programs, (4) facilities, (5) financing, (6) budget and operating costs, (7) administration, (8) business and professional personnel, (9) benefits, and (10) preventive aspects of services.

This is the third survey conducted by the Committee among the fifty union health centers in operation as of June 1, 1958. It contains, in addition to the description of each center, a number of tables which summarize some of the salient data, and a complete listing of union health centers. It also contains the "Guides for Evaluation of Management and Union Health Centers", as originally adopted by the House of Delegates in December, 1955 and revised in 1957 and 1958.

OTHER THIRD-PARTY DEVELOPMENTS

Since the publication of this survey, several developments of interest to the medical profession have taken place, one of these being the opening of a health center, the Medical Institute of Local 88, Amalgamated Meat Cutters and Butcher Workmen, St. Louis, in November, 1958. This center has received considerable publicity following the dismissal of the medical director by the union president. The medical staff has prepared "Articles of Agreement" and submitted them to the Board of Trustees of the Institute for approval. The "Articles of Agreement" set forth the rights and responsibilities of the Center's medical staff and Board of Trustees. One provision is that "The Institute shall be conducted in accordance with the 'Guides for the Evaluation of Management and Union Health Centers' adopted by the House of Delegates of the American Medical Association. . . ." In New York City, two health centers of the Amalgamated Meat Cutters were discontinued at the beginning of the year, while in Chicago a local of the Amalgamated Meat Cutters is building a diagnostic center. In Chicago, also, one union is discontinuing its union health centers and replacing this program with one of self-insurance in which each member may choose his physician. In Rochester, New York, the plans of the Amalgamated Clothing Workers Union to establish a diagnostic and ambulatory health center failed to materialize when enabling legislation could not be secured to cover ambulatory care.

The Committee is aware of other developments in which unions are establishing or planning to establish hospital and medical facilities. In Philadelphia, the AFL Medical Service Plan is planning to construct a 200-bed hospital and another union health center. In California, Sonoma County labor unions are planning to build a 150-bed hospital and clinic in Santa Rosa. The United Steelworkers has, as one of its objectives, the establishment of programs similar to those developed by the Kaiser Foundation Health Plan and to that planned by the Community Health Association in Detroit.

It was on the basis of this and other information that the Committee forcefully brought to the attention of the Committee on Insurance and Prepayment Plans of the Council on Medical Service, on January 17, 1959, the increasing dissatisfaction of unions with existing plans and the need for acquainting the medical profession with the nature of the demands of various unions. This dissatisfaction stems from criticisms of the costs, extent of coverage, and quality of medical care as they exist under current plans. The Committee noted the increasing demand for service benefits, comprehensive coverage, and control over certain abuses perpetrated by a small minority of physicians throughout the country. The Committee on Insurance and Prepayment Plans is conducting a series of regional meetings which are reported on elsewhere in the annual report of the Council on Medical Service.

FORMATION OF A NEW NATIONAL ORGANIZATION OF MEDICAL CARE PLANS

Apropos of the discussion of union health centers, the Committee calls attention to another development of interest to the medical profession. The American Labor Health Association, whose membership consists primarily of medical directors of union health centers, has merged with the Group Health Federation of America. The new organization, which has been renamed the Group Health Association of America, now has in it representatives of virtually all major plans and groups advocating group practice, prepayment, direct-service plans. Some of them, of course, favor comprehensive programs, others limited programs geared to the specific needs of the group to be served. The merger of these organizations, which took place in New York City at the Group Health Institute last May, had the strong support of the AFL-CIO.

It is interesting to note that there was not in evidence at this meeting the rancor toward or the criticism of the American Medical Association seen in the past. The restraint and self-criticism seemingly indicating a change in the attitude of some of the members of this organization appeared to stem from their favorable reaction to the *Report of the Commission on Medical Care Plans.* This, they felt, offered a basis for the development of more harmonious relations between these various medical care plans and the medical profession.

The Chairman of the AMA Board of Trustees participated in a panel discussion on the quality of medical care. This was the first time that an officer of the American Medical Association had spoken before either of these groups. His reception was a most cordial one, and there is ample evidence, now that the recommendations of the Commission's report have been adopted, that the groundwork has been laid for the development, on a bilateral basis, of guides to relationships which should be acceptable to all parties concerned.

GUIDES TO RELATIONSHIPS WITH MEDICAL CARE PLANS

The Committee on Medical Care for Industrial Workers is familiar with the contents of the Commission's report and believes that guides can be developed which would accomplish the objectives of the policy action taken by the House at the 1959 Annual Session. It is significant to note, in this respect, that no formal liaison has taken place between the Committee and the United Mine Workers of America Welfare and Retirement Fund since the 1957 Annual Session when the House adopted and the Fund rejected, the "Suggested Guides . . . UMA". The Committee has kept itself apprised of various developments on local and state levels, but has felt—as the reference committee on the 1958 Clinical Session stated the problem—"the necessity for a reassessment of some of the medical profession's previous policy statements and attitudes toward these plans, and the exercise of more rigorous controls and safeguards which will assure the provision of good medical care at a cost which the public can afford." The Committee believes that the House action on the *Report of the Commission on Medical Care Plans* affords a splendid opportunity for the resolution of some of the problems certain states have encountered in their relations with the medical program of the Fund as well as with other medical care plans.

Committee on Federal Medical Services

The membership of this committe has had one change during the year. Dr. Robert S. Green, Cincinnati, Ohio, was selected to replace Dr. Richard L. Meiling, Columbus, Ohio, who has been named a consultant. Other members are Drs. Russell B. Roth, Chairman, Erie, Pa.; Vincent W. Archer, Charlottesville, Va.; Henry S. Blake, Topeka, Kans.; Donald C. Conzett, Dubuque, Iowa; Oscar B. Hunter, Washington, D. C.; J. Lafe Ludwig, Los Angeles, Cal. In June 1959 Dr. Richard L. Meiling, Columbus, Ohio, was appointed a consultant to the Committee and for liaison with the Council on National Defense.

The Committee on Federal Medical Services held two meetings during the year, on October 19, 1958 and on February 7-8, 1959, at Chicago. It also met informally in conjunction with the Conference on Federal Medical Services at Minneapolis on December 1, 1958, and at the time of the conference between state associations with intermediary contracts and the V. A. Director of Clinics at Chicago on May 1, 1959.

PROSPECTUS OF ACTIVITIES

At its February 1959 meeting, the Committee adopted a formal statement of its over-all duties, subsequently approved by the Council on Medical Service. The Committee feels it would be appropriate to report the whole of this brief *Prospectus of Activities* for the information of the House of Delegates:

"*Major Responsibilities.*—These major responsibilities have to do with federal medical programs providing medical care or services to the *civilian population* as opposed to the military. The latter are the concern of the Council on National Defense. In matters concerning both civilian and military, the two Councils should work together through ad hoc committees.

"1. *To carry out present A. M. A. policy regarding federal medical services*

"2. *To keep informed on developments in federal medical care programs and develop liaison with their administrators*

"3. *To review and study these programs*
  a. In reference to A. M. A. policy
  b. In reference to their effect on care of those included in the program
  c. In reference to their effect on the care of the total population

"4. *To inform constituent medical associations on new developments and study findings and work with medical associations in their relationships to federal medical programs*

"5. *To suggest changes where indicated and through appropriate channels*
  a. In A. M. A. policy
  b. In legislation
  c. In program administration."

The Committee is also developing detailed methods for meeting its responsibilities in reference to particular federal programs within its scope of activities. One such method has already been designed in reference to Medicare, and similar statements will be drawn up in regard to other areas.

CONFERENCE ON FEDERAL MEDICAL SERVICES

On December 1, 1958, the Committee on Federal Medical Services sponsored a Conference on Federal Medical Services in Minneapolis during the Clinical Session. The conference was well-attended, with 194 registrants, exclusive of Committee members and panelists, from forty-eight states, including Alaska and Hawaii, and the District of Columbia. The morning session concentrated on two aspects of the medical programs of the Veterans' Administration, and the afternoon session on the Medicare program for servicemen's dependents.

V. A. Discussion

The first discussion, "The Future of Hometown Care Programs for the Veteran," concerned the three methods of administering Hometown Medical Care: intermediary contracts, direct agreements, and "designated physicians". Panel members represented state associations utilizing the three methods of administration.

The second topic, "Are Education and Research Essential to Veterans' Medical Care?", was discussed by representatives of the medical schools, the Special Medical Advisory Group to the Veterans' Administration, the American Medical Association Council on Medical Education and Hospitals, and two independent physicians. Positions were presented both for and against Veterans' Administration activity in the educational and research fields.

Medicare Discussion

The afternoon session, "Where Do We Go on Medicare?", included a detailed history of the program presented by General Wergeland, its director, a presentation of the Navy's attitude toward the program, and presentations by a Blue Shield administrator and three physicians presenting their states' reactions to the program.

The luncheon address, "Federal Medicine and the Private Patient," was given by Dr. Louis M. Orr, then president-elect of the American Medical Association and past chairman of the Committee on Federal Medical Services.

Conference Results

At the December 1958 session of the House of Delegates, the reference committee, in considering the Council's report on the Committee on Federal Medical Services, suggested that "the material derived from the Conference on Federal Medical Services, December 1, 1958, be made available to the medical profession as soon as possible." A four page resume of conference discussions was published in the Federal Medical Services *Newsletter 19*, February, 1959; Dr. Orr's luncheon address was published in The Journal of the

A. M. A., May 9, 1959; and the *Proceedings* of the Conference have been sent to all those attending, as well as to all those on the Federal Medical Services mailing list. Many additional copies have been distributed on request.

Subsequent actions of the House of Delegates and the Committee in regard to the problems discussed at the Conference are reported in the appropriate section of this report.

VETERANS' HOSPITALIZATION

Administration Policy

Several times during his administration, President Eisenhower has called attention to the problems involved in veterans' benefits, their cost, and the overlapping of the various federal and local programs of assistance to the needy. On February 26, 1959, in a letter to the Administrator of Veterans' Affairs, he finally made a full statement of his policies on V. A. hospital care. Four major points were listed, which will govern Presidential action on V. A. hospital construction and acquisition during the remainder of his term:

"(1) Continuance of complete, high quality hospital care for all veterans in need of such care for service-connected disabilities. Such care will be provided in hospitals of the Veterans' Administration, other Federal hospitals, and local community hospitals in the discretion of the Administrator.

"(2) Continuance, within the capacity of the 125,000 authorized beds in Veterans' Administration hospitals, of the care of war veterans with non-service-connected disabilities, *recognizing that basic responsibility lies with other governmental jurisdictions for providing hospital care for all citizens who are unable to defray the expenses of hospitalization.* (Italics added.)

"(3) Shifting of beds or hospitals from one type of use to another by the Administrator of Veterans' Affairs as may be permitted by law and advances in medical treatments.

"(4) With the approval of the President and subject to the availability of funds, construction to provide beds or hospitals for replacement and modernization or to compensate for major geographic shifts in veteran population, all within the over-all total of 125,000 authorized beds."

It is, accordingly, now official Administration policy that non-service-connected care will not be decreased but will, in fact, increase as the service-connected load is reduced.

(A more detailed analysis of the text of the letter was published in the Federal Medical Services *Newsletter 20*, April 1959.)

A. M. A. Policy on Veterans' Medical Care

Coming, as it did, during the midst of Administration pressures for decreased federal spending, the President's letter makes it clear that the executive branch does not feel curtailment of the V. A. hospital program is feasible at this time. A similar feeling was evidenced during the hearings by the House Committee on Veterans' Affairs at which, on July 24, 1958, Dr. Roth presented the American Medical Association's recommendations, the bases of its policy, and possible alternatives to the present system. (Dr. Roth's testimony was published in THE JOURNAL of the A. M. A., September 13, 1958, and in Federal Medical Services *Newsletter 18*, October-November, 1958.) Although Dr. Roth was cordially received and one member of the committee expressed himself as in agreement with "considerable" portions of his statement, at another point in the hearings a committee member stated "I do not think today you could get one single member of Congress to introduce a bill" to eliminate non-service-connected treatment.

However, the Committee on Federal Medical Services feels it appropriate to note that the House of Representatives passed, this year, a new veterans' pension bill, on the assumption that it would substantially reduce the long-term cost of pensions for non-service-connected disability. Since this bill is not directely related to veterans' medical care, the Committee does not feel in a position to endorse it either in part or in whole; however, its passage does indicate that similar curtailment of non-service-connected hospitalization is by no means a lost cause.

Such curtailment, however, will most probably require much greater public interest than has thus far been aroused, and the Committee feels that this must be achieved by action at the local level. Congress and the Administration apparently are both convinced that the present medical program is an object of public support or, at best, of public indifference; only a groundswell of aroused public indignation is liable to bring about a change in existing admission policies, and such indignation can be brought about much more effectively through local contacts than through discussion at the national level only.

The Committee has already distributed to individuals and groups a large number of leaflets presenting the medical profession's position to the general public (see report on Committee Publications). The Council suggests *that further widespread diffusion of these leaflets, as well as of future similar Committee publications, coupled with discussion of the medical profession's policy by well-informed medical speakers before non-medical groups, at the local level, will do much to gain the popular support that is apparently essential to legislative improvement of this program.*

At the same time, the Committee will, of course, continue to exert its best efforts at all possible points on the national level to achieve the Association's stated objective of limiting Federal responsibility to the service-connected case.

Action Under Present Law

While this long-term campaign continues, the Council wishes to call attention to the second portion of the official policy, as reaffirmed in November 1956 by the House of Delegates: "While the present law exists, we should help insure that veterans whose illness constitutes economic disaster will not be displaced by those suffering short-term remediable ills that, at worst, constitute financial inconvenience." The Council called this recommendation to the attention of the medical profession in its 1957 and 1958 reports; reference committee reports have reiterated this recommendation and requested the state associations to report any activity in this area to the Committee. The Committee has, however, in the past two and one half years, received little information regarding medical association action in this regard.

Veterans' Administration admission procedures at present make little actual effort to distinguish between degrees of financial need. With his application for admission, the veteran without a service-connected disability fills out a statement of assets and liabilities, and is subject to prosecution for any false statements made therein, but this statement is intended as a guide to the veteran, rather than to the admitting officer; it may not be used as a reason for denying admission. Admitting officers are also supposed to give the applicant an estimate of the cost of care for his illness at a local private hospital, if his disability is a short-term one, but here again the procedure is intended only as a guide, so that the applicant can better decide whether he is able to afford private care.

The only case in which relative ability to pay actually affects admission priority is that where the disability is totally covered by workmen's compensation or occupational injury insurance. In this case, the applicant is placed in the lowest admission priority category—but only on receipt by the V. A. of a written statement from the insuring agency that the veteran will have nothing to pay for his care. Even then, he cannot be refused admission, only placed in the last group on the waiting list.

Under such admission procedures, it is obvious that care may frequently be given to those who could pay at only a slight hardship to themselves, while long-term, financially disastrous cases may be forced to wait. So long as Administration policy prohibits a decrease in the total number of authorized V. A. beds, some rational policy should be established to ensure that non-service-connected care is given first to those who are truly incapable of meeting the cost from their own resources.

The Council therefore suggests *that the House of Delegates recommend the following basic improvements in admission policies for non-service-connected treatment in Veterans' Administration hospitals:*

1. *A realistic definition of "inability to defray necessary expenses."* At present the veteran is the sole judge of the meaning of this phrase and may, in all sincerity, consider himself unable to pay when other veterans in like circumstances would feel no need to seek assistance from public funds. Present admission policies encourage this attitude, since the existence of hospital and medical prepayment coverage in no way disqualifies an applicant, even should it cover the total cost of care. The Administrator of Veterans' Affairs should establish some realistic criteria, based on the veterans' resources and those of his family, his liabilities, and his responsibilities, which would help both the admitting officer and the veteran himself to determine whether he is truly eligible.
2. *A realistic estimate of the cost of care.* V. A. regulations instruct the admitting officer, in short-term cases, to give the applicant an estimate of the cost of needed care at non-Federal hospitals. The success of the application of the criteria will depend on the accuracy of this estimate.

The Council recommends that the Department of Economic Research review the formulas used and report to the Committee, at which time it will make recommendations to the Council on Medical Service with possible distribution to the state medical associations.

At present, admission priorities to V. A. hospitals take no account of the degree of financial need of the applicant. The question of whether hospitalization and medical care costs will be catastrophic, or merely inconvenient, is not considered, except for veterans whose medical costs are completely covered either under workmen's compensation or industrial accident insurance.

As long as non-service-connected care is continued, the Council recommends *that the Veterans Administration establish formal priorities for admission for non-service-connected care whereby first consideration will be given to those veterans with financially disastrous chronic, long-term illnesses and those who require intensive hospital care and other costly treatment, and lowest priority will go for those with acute short-term illnesses which cause only temporary financial inconvenience, particularly where much of the cost is covered by insurance or prepayment plans.*

The Committee does not relinquish its firm belief that, as President Eisenhower has stated, non-service-connected care is not the basic responsibility of the Federal government. Nonetheless, it is of the opinion that, so long as the Federal government retains this responsibility, the recommended changes in admission procedures, established by law or regulation as necessary, will do much to help those veterans who need help the most.

The Council suggests *that the House again urge all state associations*

1. *To assist acti[illegible]ed care for those veterans with [illegible] disabilities,*
2. *To help veteran patients determine the probable cost of care so that they may more accurately judge their ability to pay, considering the extent of their insurance coverage,*
3. *To establish liaison with Veterans' Administration hospitals to assist in estimating the cost of private care and to facilitate the admission of such catastrophic cases, and*
4. *To take such other steps as are advisable locally to assist veterans and their organizations in assuring that this care is provided for those who need it most.*

The Council also requests that it be informed of any steps of current thinking regarding health care of the aged and to provide him with concrete health recommendations which he could translate to his own older patients. The meeting featured a series of panels devoted to "Diseases Among the Aged," "Nutritional Counseling," "Promoting Physical Fitness," and "Motivating the Older Person." Each panel presentation was followed by a discussion period in which the primary interests of the audience were explored. The session was closed with a summary of the health recommendations brought out during the day in a formula for full living for the aged person.

JOINT COUNCIL TO IMPROVE THE HEALTH CARE OF THE AGED

As described in the last annual report of the Council, the Joint Council was created in 1958 by the American Medical Association, the American Dental Association, the American Hospital Association, and the American Nursing Home Association, to coordinate the efforts of these four organizations in identifying and analyzing the health needs of the aged, appraising available health resources, and developing community programs to foster the best possible health care for the aging.

At the request of the Board of the Joint Council, the American Medical Association through its Committee on Aging has contacted state medical associations, urging them to take the initiative in establishing joint councils at the state level, and has provided each association with the names and addresses of the appropriate state dental, hospital, and nursing home association affiliates. The States of Massachusetts, Iowa, Michigan, Texas, Illinois, and Georgia now have actively functioning joint councils, and eight additional states are in the process of forming such councils.

THE WHITE HOUSE CONFERENCE

In 1958, Congress passed an act calling for a National White House Conference on Aging to be held in 1961 under auspices of the Department of Health, Education, and Welfare. This conference will bring together representatives of government at all levels, all types of professional and lay groups, and the general public including older people themselves from every state, territory, and possession, to develop plans of action for utilizing the untapped skills, experience, and energies of older people. The act also provides for funds to assist states in holding pre-conference meetings. The Committee continues to advise and alert state medical associations as to plans for state conferences, so that medicine will be adequately represented in pre-conference activities. A number of states have already held exploratory meetings, at which medicine has been well represented.

In June of this year, Secretary Flemming of the Department of Health, Education, and Welfare announced appointment of 130 persons to a Citizen's Advisory Committee which will assume over-all direction of the plans, preparations, and conduct of the White House Conference. Drs. Frederick C. Swartz and Edward L. Bortz of the Committee have been named as members of this group. Eleven other members of the American Medical Association have also been appointed to the Committee.

The National Leadership Training Institute for the White House Conference, held June 24-26, was designed to provide instruction and guidance for national organizations, state officials, federal personnel, and state and community volunteer leaders in preparation for local and state activities relating to the White House Conference. Medicine was well represented with physicians from 20 state medical associations present at the request of the Committee on Aging.

MEDICINE'S BLUEPRINT

"Medicine's Blueprint for the New Era of Aging: A Positive Health Program for Older Citizens," discussed in the previous Annual Report by the Committee and Supplementary Report of the Council, has been reprinted. As of June 1, 1959, the initial printing of 25,000 was exhausted. Because of the continuing volume of requests for this publication, the Committee found it necessary to order an additional 25,000 copies.

This 21-page publication sets forth six areas for action by medicine in meeting needs of the aging. Its program has formed the basis for increased leadership by constituent and component medical societies in programs for the older citizen.

HEALTH ASPECTS OF AGING

"Health Aspects of Aging," a brochure containing 12 articles on various aspects of the aging problem, (described in the last Annual Report of the Committee) has been reprinted. Numerous requests for this brochure are being received from Red Cross chapters, hospitals and nursing homes, health and welfare agencies, schools, and other groups and individuals for use in programs of staff training and public education.

CHRONIC ILLNESS NEWSLETTER

The Council has continued bi-monthly publication of the Chronic Illness Newsletter. As before, emphasis continues to be placed on specific programs and projects at community and regional levels. The mailing list for this publication now approximates 7,000. Requests continue to be received for extra copies of various issues, and a number of Newsletter articles have been reprinted in "Aging" (published by the Special Staff on Aging of Health, Education, and Welfare), local health department bulletins, and other media. Newsletter content continues to be supervised by an Editorial Advisory Committee composed of Doctor Henry B. Mulholland, Doctor Dean W. Roberts, and Mrs. Lucille Smith, former members of the National Commission on Chronic Illness, and Doctor Edward L. Bortz, Consultant to the Committee on Aging.

CENTRAL INFORMATION AND REFERRAL SERVICES

A survey of central information and referral services for the chronically ill has been completed. Reports on four of these centers operating in Chicago, Milwaukee, Cleveland, and San Francisco have been published in The Journal. This material has also been reprinted in brochure form.

There are presently five such services operating in this country; the four mentioned above and an additional service in Essex County, New Jersey. These centers seem to be most useful in densely populated metropolitan areas, where there is often a lack of centralized information on the many services and facilities available for long term care. In less densely populated areas such informational and referral services are often handled quite adequately by already existing agencies such as local health or welfare departments.

National Health Forum, 1960

Doctor Edward L. Bortz, Consultant to the Committee, has been named as chairman of the 1960 National Health Forum sponsored by the National Health Council. The 1960 Forum will have as its theme the Health of the Older People.

International Congress of Gerontology

At the invitation of Doctor Herman T. Blumenthal, who is chairman of the North American Committee for Aging Research and Clinical Medicine, Doctor Theodore G. Klumpp will be serving as a member of Doctor Blumenthal's Committee in developing the program of the International Congress of Gerontology to be held at San Francisco in the summer of 1960. Mr. Lewis Kuplan, President of the Gerontological Society, has requested that the Committee on Aging present a scientific program, similar to that given at the Annual Session, during an evening session of the International Congress on Gerontology. The Committee at its June 12 meeting in Washington, D. C. agreed to prepare papers for such a program.

Memoranda to State Committees

In order to keep state medical societies informed regarding current activities in the field of aging, the Committee has initiated the practice of sending periodic consolidated memoranda to the president, executive secretary, and chairman of the committee on aging of each state society.

Respectfully submitted,

John Flack Burton, M.D.
Reuben B. Chrisman, Jr., M.D.
T. J. Danaher, M.D.
Gunnar Gundersen, M.D.
J. Lafe Ludwig, M.D., Chairman
Robert L. Novy, M.D.
Russell B. Roth, M.D.
Carlton E. Wertz, M.D., Vice Chairman
Hoyt B. Woolley, M.D.
Willard A. Wright, M.D.
Mr. George W. Cooley, Secretary

REPORT OF THE COMMITTEE ON MEDICAL PRACTICES

The Committee on Medical Practices has held three meetings and has conducted the first of a series of projected regional meetings since its last report to the House.

The following members comprise the committee: Dr. Lester D. Bibler, Chairman, Indianapolis; Dr. J. S. DeTar, Milan, Michigan, who replaced Dr. W. Andrew Bunten; Dr. James P. Hammond, Bennington, Vermont; Dr. James M. Kolb, Clarksville, Arkansas; and Dr. Elmer G. Shelley, North East, Pennsylvania. Staff: George W. Cooley, Staff Secretary; Murray Klutch, Research Associate.

The Committee's activities have been directed toward the implementation of the policy action adopted by the House of Delegates (1958 Clinical Session) with regard to the conduct of relative value studies by constituent medical associations. It has acknowledged the importance and necessity of acquainting the medical profession with the opinions and judgment of the delegates regarding the urgency of carrying out these studies by holding regional conferences, by meeting with representatives of various specialty and professional groups as well as of Blue Shield and private insurance organizations, and by issuing a number of publications dealing with the major facets of relative value studies. It has been guided in its efforts, to a large extent, by the admonition given to the House by the reference committee at the 1958 Clinical Session which stated, in part:

> Your reference committee is of the opinion that the need for a study or studies is apparent and demonstrable in the light of current developments. It is also of the opinion that unless medicine does undertake this activity, it may be done by others who are less qualified.

The decision of the House of Delegates to adopt the Committee's proposal to recommend universal adoption of the nomenclature and coding system developed by the California Medical Association enabled the Committee to lay the groundwork for the preparation of a series of six Relative Value Publications to date. These have received considerable distribution, and are being used as the basis for conference discussions and educational efforts. The following is a brief description of the contents of each publication.

Relative Value Publication No. 1 consists of a statement containing the background, objectives, and need for such a study. It also includes the Report of the Committee and the action of the House at the 1958 Clinical Session.

Relative Value Publication No. 2 contains a listing of the code numbers and nomenclature as developed by the California Medical Association and as contained in the 2nd edition of that state's study which was issued in November, 1957. The Committee has adhered to the directive of the House by omitting from this publication any listing of unit and/or dollar values for medical services.

Relative Value Publication No. 3 consists of a suggested format for the conduct of a relative value study. It is based upon a resurvey schedule developed by the California Medical Association. This publication is currently being revised and designed by the Committee so that it may be used as a standardized survey schedule by any constituent medical association desiring to conduct a study.

Relative Value Publication No. 4 contains a check list of Things to be Done; that is, some important elements and factors to be considered in the planning, development, and conduct of a relative value study.

Relative Value Publication No. 5 comprises a series of questions most commonly asked by physicians and medical societies about such studies, and provides clear and concise answers to them.

Relative Value Publication No. 6 consists of a group of charts and visual aid presentations to highlight various aspects of relative value studies. Distribution of this leaflet is confined to participants of regional conferences.

In addition to the foregoing, the Committee has published detailed *Proceedings* of its First Regional Conference on Relative Value Studies held in San Francisco on April 11, 1959. This publication contains much of the basic information physicians will need to become acquainted with this development.

The success of the First Regional Conference, which was attended by representatives from ten western states, can be attributed largely to the cooperation of the California Medical Association and to those of its members who have been studying this problem for a number of years. The Committee is particularly indebted, among others, to Dr. Francis J. Cox (San Francisco) who has given it the advice, leadership, and the benefit of his broad experience and knowledge of this subject. His consulting services represent an outstanding example of the devotion and dedication of a physician to the socio-economic problems of medicine. The Committee is also indebted to Drs. Donald C. Harrington (Stockton, California) and William J. Reals (Wichita, Kansas) for their many and invaluable contributions to the varied activities of the Committee. It gratefully acknowledges the advice and assistance of Drs. DeWitt Burnham (San Francisco) and Henry D. Hoskins (Oakland), and is most appreciative of the cooperation and assistance rendered to it by Mr. Robert L. Thomas, Assistant Executive Secretary of the California Medical Association.

In gauging the effectiveness of its efforts, the Committee can, perforce, only be guided by the response of an audience to the message it has to deliver. It was apparent from the discussions and the broad range of questions at the First Regional Conference that the philosophy and concept of the relative value study contains within it the seeds and potentials of meeting and resolving many of the problems physicians and medical societies have encountered in the development and administration of prepayment insurance programs. Such studies, it was revealed, also represent tangible assets in the development of fees for programs supervised by health and welfare funds or directed by numerous state and federal administrative agencies.

The results of its discussions with physicians and representatives of other organizations concerned in the administration of health insurance programs have reinforced the belief of the Committee that there is a demonstrated need for the development of relative value studies—a need expressed by trustees of funds for a more scientific accounting of the monies expended for medical care, by the patient for a better understanding of the basis for physicians' charges, and by the physician in his private practice to explain to the patient the basis for his charges.

A consequence of the Conference was that seven of the ten states indicated a desire to receive survey materials for further discussion with their medical societies in preparation for the possible conduct of relative value studies. The outcome of this meeting, which served as a pilot in determining whether other regional conferences should be held, was that the Committee scheduled two additional conferences for this fall: one for the New England states in Boston, and one for the midwestern states in Indianapolis.

This educational effort to acquaint medical societies with the fundamentals of relative values represents only part of the activities of the Committee. Simultaneously, the Committee has been meeting with representatives of various specialty groups, Blue Shield, and private insurance companies. It is keeping itself informed of efforts both within and without the medical profession to develop relative value studies or schedules—and at least one of these bears out the warning of the Committee and the reference committee that, "it may be done by others who are less qualified" unless the medical profession does it first. The Committee is pursuing this development further and hopes to be able to correct this situation and to prevent its recurrence in the future. The Committee believes that the attention of the House should be drawn to a development in Canada where the creation of a system of relative values on a time-study basis of medical practice is being attempted. Such a determination will be made by lay individuals, primarily. The Committee is of the opinion that such a method would be far less acceptable, if at all, to the medical profession in this country than the method this Committee is employing.

The Committee wishes to inform the House that there is by no means unanimity of opinion among all physicians concerning the acceptance of the concept underlying relative value studies. From its contacts, discussions and correspondence, the Committee is aware that there are some physicians and medical societies and at least one small association of physicians that are opposed to relative value studies for philosophic or economic reasons. Perhaps the outstanding one is the fear that relative values can culminate in the establishment of fixed schedules of fees for physicians' services. Another reservation is based on the assertion that such a system interferes with the traditional right of a physician to determine, without any interference whatever, the fees he may charge his patients. Where lack of interest, rather than opposition, is expressed, it is largely attributable to the stated absence of any problem which may necessitate the adoption of relative values.

In its Report to the House last December, the Committee stated that although relative values *are not fees*, they may be used, where desired, as the basis for the establishment of fees. Some of the opposition to relative values is based on an erroneous assumption that relative values will conclusively result in fixed fees for all physicians. It is possible, however, to develop mutually satisfactory fee schedules which are based upon unit values, depending upon a specific or particular circumstance or situation as determined by the individual state medical society. For example, a medical society may wish to negotiate with a state or federal agency and agree to apply specific dollars and cents coefficients to categories of unit values in order to arrive at fee schedules in which physicians may participate if they desire to do so. This, it should be pointed out to the House, is already being done under various governmental programs without benefit of a relative value index. The application of a relative value study to a situation like this would, however, bring order and scientific application of dollar values where, perhaps, custom and guesswork have previously existed. Thus, relative values can correct and improve deficiencies in existing programs. They can benefit the physician rather than perpetuate inequities which he has been unable to rectify because he has previously had no scientific basis upon which to prove his contention that existing fee relationships were outmoded. This same application could be made to certain health and welfare funds, the trustees of which might wish to secure a more scientific accounting of the dollars spent for medical care or might wish to secure specific types of coverage for the members they serve. Examples of these are the application of relative values to Medicare fee schedules and the creation of Foundations by physicians as in the case of the San Joaquin County Foundation for Medical Care.

For these and other reasons, the application of relative values to the development of insurance contracts can be of invaluable assistance to the insurer—whether it be a medical society approved plan or an insurance carrier. Not to be lost sight of, however, is one of the over-riding reasons the House of Delegates authorized the appointment of this Committee and that was to bring into greater harmony a recognition of the value of the services provided by all physicians. Relative values represent a method whereby this understanding and public education can be created. Moreover, by instilling the proper perspective of the relationship of the value of one type of medical service to another, relative values provide the medium by which all physicians may explain the reasonableness of their charges and reduce to a minimum misunderstandings and mistaken impressions among the general public.

As of the date of the preparation of this report, a number of states, in addition to that of California, have adopted relative value studies or have applied them in their prepayment programs. They are: Arkansas, Iowa, Kansas, Maine, Michigan, Utah, and the District of Columbia. Some of these and a number of others are planning to conduct relative value studies in the very near future. Many others are studying this development and have appointed committees or individuals to investigate the advisability of conducting studies. Future Committee reports will enumerate these developments.

The Committee concludes its report to the House by recommending that it be permitted to use the term "relative value index" interchangeably with "relative value study." The former term, it is believed, is more accurately descriptive of the system of unit values derived from a relative value study, and attempts to strengthen further the true meaning and application of unit values.

Respectfully submitted,

Lester D. Bibler, *Chairman*
James P. Hammond
Elmer G. Shelley
J. S. De Tar
James M. Kolb

REPORT OF THE WOMAN'S AUXILIARY

To the Members of the House of Delegates
of the American Medical Association:

The 1959 convention of the Woman's Auxiliary to the American Medical Association held in Atlantic City concluded our 36th year of service in health education. This summary covers the year 1958-1959 under the presidency of Mrs. E. Arthur Underwood, who stated in one of her reports, "There may be a redirection of emphasis as old obstacles are passed and new ones come into focus in this ever-changing world about us. But our goal remains the same. There is continuity of program, and no change in purpose. Our objective, simply stated, and our theme is Safeguard Today's Health For Tomorrow. The individual's being well determines the community's well-being." Numerous applications and areas for action were suggested by Dr. Gunnar Gundersen in an article in our September 1958 Bulletin, "Variations on a Theme." This served as an inspiration, and expanded our horizons of service for the year. Reports from 50 state auxiliaries showed that our members made a united effort to consolidate the value of their citizenship by participating in worthwhile community activities. Approximately 32 per cent of our members reported 2,577,000 hours of service.

As a bridge between the years, at Mrs. Paul C. Craig's recommendation, Mrs. Underwood as president-elect wrote "The Changing of the Guard," a forecast of plans and priority projects for 1958-1959, which appeared in the May, 1958 Bulletin. Response gave us the incentive to supply material to state officers and chairmen early in the year. "Information, Please!" a compilation of approved resource material, was a result. Mrs. Charles Flynn, our program chairman, was responsible for the idea and its original execution, wherein all committee chairmen's plans were summarized, with the sources indicated.

Areas selected for concerted effort were the American Medical Education Foundation, to which we contributed $140,500 this year, bringing our total contribution to $660,000 since 1951. Individual donations are not necessarily larger, but many more are participating and giving. Chairmanship of A.M.E.F. is a cherished post because we receive such splendid cooperation and direction from staff members of the American Medical Association.

At the direction of the 1958 convention, a loan of $3,000 without interest was made to the Woman's Auxiliary to the Student American Medical Association, which held its second convention in Chicago this year. Its president was a guest at our Fall Conference. Mrs. William Mackersie was liaison between the Woman's Auxiliary to the A. M. A. and the Woman's Auxiliary to the S.A.M.A.

By vote at the 1958 convention we also made token gifts of $100 each to the United States Committee of the World Medical Association, the Crusade for Freedom, and the Student American Medical Association Loan Fund for medical students; and $5,000 to the American Medical Education Foundation in memory of our members who died in 1958-1959.

In 1958-1959 we were responsible for 52,885 subscriptions to Today's Health magazine.

Recruitment to paramedical careers has assumed greater importance in our relationships at the community level. Our constituent auxiliaries and other organizations were informed of the opportunities and the needs in the field of paramedical careers. Projects for promoting recruitment of young men and women in these allied fields were developed and implemented in the state and county auxiliaries. We provided $131,612 in scholarships, and another $75,000 in student loans this year.

Noteworthy service was performed in the field of safety in cooperation with the National Safety Council and local organizations which had selected safety as their project.

Through 1958-1959 every division of the American Medical Association has given assistance to Auxiliary officers, national and state. The value of the cooperation and guidance can be measured by our service at the community level. Dr. Gunnar Gundersen, Dr. F. J. L. Blasingame, and members of the Board of Trustees have given of their time and have always been willing to offer guidance to our leaders. Dr. Ernest B. Howard, our liaison to the Advisory Council, consults with us, and at our convention and conference has given us an up-to-the-minute summary of events about which it is important for us to have accurate information.

Dr. Louis M. Orr's suggestion at a convention luncheon that representatives of the Woman's Auxiliary attend the meetings of the House of Delegates to bring us information was well received.

The AMA News has proven a fine source of timely information to officers and chairmen this year.

A. M. A. Division Directors were most helpful at our conference, and at their respective meetings, particularly the Public Relations Institute, the Committee on Civil Defense, Council on Mental Health, the State Chairmen's meeting of A.M.E.F., and Council on Rural Health. We are grateful for Mr. Leo Brown's guidance in the field of communications, service and public relations.

It is customary for the national president to attend state auxiliary conventions or conferences, and to represent the Auxiliary at meetings of non-medical organizations with which we have associations. Mrs. Underwood took part in 28 state conventions and three state conferences. Other national officers attended other state meetings. Mrs. Underwood reported to the A. M. A. House of Delegates at both the Annual and Clinical sessions, and with other officers was a guest of the A. M. A. Public Relations Institute, Committee on Civil Defense, Council on Mental Health and Council on Rural Health. At the Rural Health conference in Wichita, Mrs. Underwood gave a professional paper on dentistry. She attended the convention of the Woman's Auxiliary to the Southern Medical Association, and participated in a panel, "Should Drunken Drivers (First Offense) Go To Jail," at the National Safety Congress. During the Congress she was appointed to the executive committee of the Woman's Activities Division of the National Safety Council, and the chairmanship of the membership committee. She served as a judge for the National

Safety Council's Carol Lane Awards. She also attended the course in civil defense and survival medicine at Brooke Army Medical Center at Fort Sam Houston, Texas.

Other officers represented the Auxiliary at meetings of the American Cancer Society, American Bar Association Traffic Court program, American Dietetic Association, National Association for Mental Health, The National Foundation, Commission on Health Careers, Western Council of State Leagues of Nursing, Woman's Auxiliary to the Student American Medical Association, Council of National Organizations on Children and Youth of the White House Conference on Children and Youth; National Woman's Advisory Committee to the Office of Defense and Civilian Mobilization; the A. M. A. Council on Legislative Activities, and the Traffic and American Bar Association Seminar.

Mrs. Underwood stated that one of the highlights of the year was the invitation extended by Dr. Gunnar Gundersen to be an official observer at the World Medical Association meeting held in Copenhagen in August, which she attended at her own expense. "Men of medicine of the world look to the American Medical Association for leadership. This places members of the Woman's Auxiliary in a position of direct responsibility."

She also attended the meeting of the Woman's Auxiliary to the Alaska Medical Association in Juneau and spent half a day in the new State Legislature; also the convention of the Woman's Auxiliary to the Hawaiian Medical Association in Hilo.

Our membership is 78,221. National active members are the wives of active or service members of the American Medical Association (or widows of men who were in good standing at the time of their death). National associate members are those members of constituent auxiliaries who do not qualify for active membership. We realize that an active, enthusiastic membership will allow us to formulate and pursue the goals we wish to achieve in community service. To learn what needs to be done, we must develop our capacities of observation and techniques for measuring the needs of our community. To this end, we need the guidance of every member of the American Medical Association. Our activities should be confined to those problems for which we are fitted by education and interest, and where we receive A. M. A. guidance.

When he spoke to the members of our conference last fall, Dr. Gundersen said, " I am very happy to salute the Woman's Auxiliary and to express the very sincere hope that, in the days that lie ahead, your organization, the Auxiliary, will continue to enjoy the confidence and respect of the public, whom, after all, you are privileged to serve with fidelity and to whom your lives and our lives are dedicated in the very finest tradition of our noble calling."

If each member does her best, we will merit the confidence expressed by Dr. F. J. L. Blasingame, "I believe it is essential that you do not underestimate your value to the medical profession because you are a most valuable asset. Thus, you have a tremendous responsibility that you have been meeting wonderfully well. However, when we look at the problems around us, we realize we cannot rest on our laurels. It is proper and timely that we re-examine ourselves to see how each of us can best measure up to the problems of the day."

Dr. Louis M. Orr stated, "I am convinced that we in the A. M. A. and the Auxiliary must take our story to the public and give them the facts so that they can recognize the dangers of legislation such as has been introduced by Representative Aimee Forand and others. Forand-type legislation is part of the whole modern day pattern of obtaining security and the comfortable life at the expense of personal freedom. Can we afford to allow any part of our freedom to be taken away from us via legislation? Indeed not. People must have freedom if the nation is to be free."

Today we look to the years ahead. The Joint Council for the Health Care of the Aged, formed in April, 1958, directs many of our activities toward the care of the aged. Mr. Leo Brown, Director of the Communications Division of the A. M. A., has stated "True happiness comes from helping others." For the future of our nation, freedom is important, and as Dr. Orr has pointed out, "Let us be cautious about allowing the federal government to solve every matter that arises. Getting rid of responsibility does not give an individual more freedom." To deserve freedom, we can do no less than accept "individual responsibility for better community health."

"The Year Ahead," our overall Auxiliary program for 1959-1960, appeared in our May Bulletin and in workbooks presented to officers and chairmen at the planning meeting which closed our convention. A program of action to meet our goals is the aim of our fall conference of state presidents, presidents-elect and national officers and committee chairmen in Chicago. Mrs. William Mackersie, our president-elect, is the presiding officer.

The continued supervision and help which state medical societies are giving our state auxiliary leaders have resulted in better informed leadership and a greater sense of responsibility. We can do no less than actively support the 1959-1960 Auxiliary objective: "Individual Responsibility for Better Community Health."

Mrs. Frank Gastineau, *President*

August 24, 1959

REPORT OF THE AMERICAN MEDICAL EDUCATION FOUNDATION

This report summarizes the last half of the Foundation's eighth year and the first half of the ninth.

The Foundation continued its growth both in the number of contributors and amount contributed towards the financial aid of the nation's 85 medical schools. As of December 31, 1958, the total contributed since 1951 had reached $7,159,182. Contributions for 1958 reached a record breaking $1,120,045 plus interest earned during the year. Contributors in 1958 jumped from 44,155 to 49,730. During the first half of 1959 the total, since 1951, had reached $8,028,365.

The figures for the first six months of 1959 indicate that this year will see a sizeable increase in the number of contributors. This steady growth of support by organized medicine reflects its growing awareness of the necessity for private aid to the nation's medical schools. Heavy activity during the year in state after state is an even more graphic example of this awareness. Together with the growth of support for AMEF is a similar increase in contributions direct to the schools. Many physicians who first contributed to AMEF now report that they have responded to a direct appeal from their schools. Altogether, American medicine is responding to its obligation in a more significant manner each year.

Distribution of Annual Grants to the Schools.—Formal distribution of 1958 grants was made at a special ceremony during the Congress on Medical Education and Licensure at the Palmer House, February 9, 1959, in Chicago. The grants were presented to Dr. John McK. Mitchell, representing the medical schools, by Dr. George F. Lull, President of the AMEF. The total amount distributed was $1,133,257. Of this amount, $627,947 was specifically designated by donors for their schools. The remaining $505,300 was distributed in equal grants of $6,200 for four-year schools, and $3,100 for two-year schools of basic science. Within several weeks letters had been received from the deans of these schools outlining the uses to which the funds would be put. Almost all of the correspondents emphasized that the grants were particularly important because of their unrestricted nature. The varying uses to which the funds were put graphically illustrated their extra-budgetary nature and re-emphasized the continued importance of the American Medical Education Foundation's efforts.

State Activities and Gifts.—The continued success of AMEF tends to prove the value of different approaches in several parts of the country. While it is impossible to enumerate the individual activities in each state and area, it may be said that generally the intensive annual campaign for the Foundation follows one of several general patterns. Of these the most frequently used is the mail campaign. Another is the campaign of individual solicitation. Still a third is a combination of these two or a combination of mail and telephone appeals. The ingenuity and resourcefulness of state and county chairmen throughout the country have altered and embellished this type of campaign. For the past two years a collection of the most successful of these campaigns has been compiled and distributed to all committees.

The dues increase program has expanded with the inclusion of Georgia, which has instituted a $5.00 increase to be included in the constituent county dues structure for AMEF. A stipulated amount for AMEF, added to the dues, was included as an optional payment in the programs placed in effect in Connecticut, Maryland and Michigan. Identical plans have been proposed in New Hampshire, Virginia and West Virginia that will be considered by the Houses of Delegates of these states in the fall of 1959.

Contributions in 1958 from most of the states showed increases over previous years' efforts, ranging from $9.00 to more than $31,000 in one instance. Alaska, making its contribution for the first time as a state, went from $125 in 1957, to $1,414 in 1958. Illinois, again, led the list of the states in total monies given with $200,191. Nevada, however, kept its leading position by again giving the largest amount from each individual physician and a participation from the Nevada State Medical Society of well in excess of 100 per cent because a number of physicians gave several times.

Several gifts were received during the year which are worthy of special mention. Of these the largest was one of $25,000 received as a treasury gift from the Medical Society of New Jersey. Audio-Digest Foundation, a non-profit subsidiary of the California Medical Association, presented a check for $10,000 to AMEF during the California meeting in February, 1959. Special recognition was given to several other states during the June, 1959, American Medical Association meeting in Atlantic City, New Jersey. Awards of Merit were presented to the medical societies of Alaska, Arizona, California, Illinois, Indiana, Iowa, Massachusetts, New Jersey, South Carolina, Utah and Virginia. A special award has been prepared to recognize Nevada's leadership during the past several years.

Officers and Board of Directors.—The Board of Directors of the American Medical Education Foundation's meeting, during the Clinical Meeting in Minneapolis in December 1958, unanimously re-elected Dr. George F. Lull, President, Dr. Edward L. Turner, Secretary-Treasurer, and Dr. F. J. L. Blasingame, Vice President. Other members of the Board of Directors also continued in their posts.

National Campaign Committee.—In January 1959, preceding the State Chairmen's conference, an organizational meeting was held of the new National Campaign Committee. This Committee will give direction to the efforts of the state and local committees. In addition, it will attack areas of support that are nation-wide in scope. Dr. Frank B. McGlone of Denver, Colorado, was selected by the Board of Directors as chairman of the new Committee. Dr. McGlone had done outstanding organizational work in the development of Colorado's appeal for AMEF. Eight other veteran state chairmen were chosen from regions into which the country had been divided. These committeemen are as follows: Dr. J. K. Burton, Boise, Idaho; Dr. Jack Q. Cleveland, Coral Gables, Florida; Dr. W. G. H. Dobbs, Torrington, Conn.; Dr. James E. Fitzgerald, Washington, D. C.; Dr. Wilbur E. Flannery, New Castle, Pa.; Dr. W. E. G. Lancaster, Fargo, North Dakota; Dr. James P. Murphy, St. Louis; and Dr. Carlo J. Tripoli, New Orleans.

This Committee met again in June, in Atlantic City, where plans for the fall campaign and some of the problems of AMEF's appeals were attacked. One of the ideas strongly recommended by this Committee was the exploration of a regional approach to the AMEF program, using regional meetings to stimulate interest and effort for medical school support. This Committee recommended to the Board of Directors that such a regional meeting be held in the fall as an experiment.

State Chairmen's Meeting.—The eighth annual State Chairmen's meeting was held January 24 and 25, 1959, at the Palmer House in Chicago. This meeting was the most successful yet held. More than 70 representatives from the 48 states and the District of Columbia were present. State Chairmen and state advisory members were addressed at the opening session by Dr. George Lull, President of the Foundation, Mrs. E. Arthur Underwood, President of the Woman's Auxiliary, Dr. Gunnar Gundersen, then President of the American Medical Association, and Dr. Hugh H. Hussey, Dean of the Georgetown University School of Medicine, a member of the American Medical Association Board of Trustees and the AMEF Board of Directors. Again the State Chairmen's meeting proved particularly helpful to those attending through the open exchange of ideas and methods.

AMEF Alumni Relations.—During the year several steps were taken which indicate increased cooperation between AMEF and the alumni programs of the medical schools. Of these the most important seems to be the increased interest shown by several schools in cooperative programs of the "Georgetown" type. Discussions were held with alumni officials of the Yale University School of Medicine, Louisiana State University School of Medicine, George Washington University School of Medicine and Howard University College of Medicine. In addition, interest was expressed in similar programs by the University of North Carolina School of Medicine, Duke University School of Medicine, Emory University School of Medicine and Georgia College of Ed. Medicine and Surgery. Active participation in a cooperative program began in the early fall as the University of Texas Medical School at Galveston adopted the "Georgetown Plan". Special literature was prepared by AMEF and forwarded to the school.

Physicians direct contributions to medical schools by restriction 1958

Restriction	Amount of Contributions	No. of Contributions
Unrestricted	$1,601,987.21	38,561
For Teaching Budget	39,312.32	1,050
For Specific Department	89,458.17	1,449
For Building Fund	854,552.71	6,692
For Research	78,273.23	699
For Scholarship and Student Aid	109,178.90	2,043
For Library	9,003.81	227
For Endowment	147,771.51	1,629
Others	104,867.67	2,896
Totals	$3,034,405.53	55,246
AMEF total distributed	$1,133,258.00	49,730
Total Physician Giving to Medical Education, 1958	$4,154,450.53	104,976

Direct Contributions.—Following is a table showing Physicians' Direct Contributions to Medical Schools by Restriction. Although the American Medical Education Foundation has been continuously concerned with the unrestricted gifts to medical schools, it receives reports from the schools of all physicians' gifts. It is significant that there was a substantial increase in unrestricted gifts made direct. 1957's unrestricted total was $1,467,098 compared to the figure of $1,601,987 shown on the table.

Woman's Auxiliary Activities on Behalf of AMEF.—It is again a pleasure to report a sizeable increase in contributions to AMEF by members of the Woman's Auxiliary to the American Medical Association, reflecting the Auxiliary's continued and ever-growing interest in the needs of the nation's medical schools. During the year 1958-1959, ending June 30, Auxiliary gifts increased to $140,500 from the previous year's $126,616. Special recognition for this important part of the year's AMEF total figure must necessarily go to Mrs. E. Arthur Underwood, President of the Woman's Auxiliary to the American Medical Association, who again made AMEF one of the priority projects of the Auxiliary; and to Mrs. Karl F. Ritter, National AMEF Chairman, serving for the second year, for her untiring efforts on behalf of the nation's medical schools. Additional thanks are also extended to the four regional chairmen, to all state chairmen, and to the hundreds of county chairmen, who through their guidance and their many ingenious efforts, have made this AMEF-Auxiliary year so successful.

Among the many fund-raising ideas used by the Woman's Auxiliary to benefit AMEF this season was the continued promotion of the "Evening at Home" project whereby Auxiliary members again sold tickets to physicians allowing them to spend a quiet evening in their own living rooms. An increased use of the Sympathy, In Appreciation, and Utility cards once more proved to be an easy and distinctively correct way to help AMEF. Auctions, bridge parties, white elephant sales, handmade articles, dances, and even the selling of tickets for boat excursions were among the other means used to raise money for the nation's medical schools.

New portfolios were designed as working tools for Auxiliary-AMEF Chairmen. Included in these kits, which were sent to all state and county chairmen, were three new pieces: a flyer describing how Christmas cards for AMEF could be made by obtaining a newly-designed printing plate from the AMEF office, a folder of questions and answers about the Foundation called, "Thoughts About A.M.E.F.", promoting the use of the Sympathy, Utility and In Appreciation cards. A revised list of money-making suggestions was also included among the usual thank you notes, samples of AMEF cards and other promotional materials.

Program Activity.—In the twelve month period covered by this report, AMEF staff members have visited nearly every state in an effort to further the state programs and aid the chairmen in their work. Promotional material has been prepared in large quantity and forwarded to the state committees so that each local AMEF committeeman is supplied with data and information on the Foundation. In the field of metropolitan campaigns, a program known as the "Minneapolis Plan" was developed to great success in the fall of 1958. This program utilizes hospital staff affiliations and meetings. During the trial in Minneapolis, Minnesota, each physician in the Hennepin County Medical Society received two letters previous to the campaign month and then, during that month, heard speakers during a brief portion of the monthly staff meeting at each of those hospitals with which he had affiliation. The program has been adopted in several other large metropolitan areas.

The most successful new program of the year is one labeled the "Arizona Plan". Through this program, druggists and others in local medically-allied business are encouraged to make contributions to the Foundation in honor of physicians to whom they have been in the habit of giving Christmas gifts. To date the medical societies of four states have officially approved and adopted the program and action toward this end is under way in at least a half dozen others. Several hundred copies of a formal presentation of the program have been mailed to AMEF officers in nearly every state. It is expected that, within a year, this program will show significant results in the Foundation's annual total.

The annual year-end mailing to the entire profession resulted in a return of over $63,000. Another successful innovation was the inclusion, in the November 1958 issue of the Journal of the New England Medical Association, of an editorial and return envelope requesting a contribution. This was the first time such an approach had been utilized and proved most successful as several thousand dollars were returned in the "tipped-in" envelopes. With this as a precedent, the Journal of the American Medical Association used a similar envelope together with an advertisement in its pages in the December 21 issue. The New England Journal has a circulation second only to J. A. M. A., so that, by their leadership, the two publications were able to effect a nearly perfect coverage of the physician population.

A monthly news letter entitled, "The Foundation," was begun in the fall of 1958 and has now reached a circulation of over 2000. Included in each issue are stories of AMEF activities, a monthly progress report and other pertinent information.

An announcement was made during the year of a program at the University of South Carolina Medical Department whereby faculty members contribute portions of their income above an established ceiling. The plan resulted in a $26,000 increase of the South Carolina state total and has generated interest in many other schools.

Several new folders were developed in the fall of 1958 to be used by state societies in their campaigns. More than twenty-five states requested these folders by the thousands. The fall mailing, previously mentioned, included a Progress Report that combined the 1957 Annual Report with an appeal to the physician for support and a letter sent by the President of the American Medical Association. This Progress Report has been used as the keystone of most of the promotional materials distributed by the Foundation.

Appreciation.—As in previous years, the Board of Directors of AMEF offers its thanks and appreciation to the members of the House of Delegates, Trustees and Officers of the American Medical Association for their assistance and support, for individual gifts and the administrative and operating funds necessary to carry on the work of the Foundation. Expressions of appreciation are also offered to the many state and county journals, bulletins and newsletters which have so generously contributed their space to the Foundation. Special thanks are due to the Editor and staff of *The Journal of the American Medical Association* for advertising space and the presentation of editorial material during the year. *Modern Medicine* and *Medical Economics* have also offered their columns to AMEF.

The Board of Directors of the American Medical Education Foundation expresses its sincere appreciation to all of those who have had a part in the outstanding success of AMEF during 1958, and the equally gratifying start for 1959. Included in this large group are all those state and local chairmen who have given so graciously of both their time and money, the Advisory Members who have contributed their experience, the members of State Committees for their unflagging efforts in our behalf, the members of the Woman's Auxiliary whose resourcefulness and hard work have kept pace with the increasing needs of medical education, and most importantly, the nearly 50,000 physicians whose generosity has helped to ease the financial burdens of medical education.

Respectfully submitted,

George F. Lull, M.D., *President*
F. J. L. Blasingame, M.D., *Vice-President*
Edward L. Turner, M.D., *Secretary-Treasurer*
Donald G. Anderson, M.D.
Louis H. Bauer, M.D.
John W. Cline, M.D.
Lowell T. Coggeshall, M.D.
Gunnar Gundersen, M.D.
Edwin S. Hamilton, M.D.
Hugh H. Hussey, M.D.
Victor Johnson, M.D.
Leland S. McKittrick, M.D.
Walter B. Martin, M.D.

COUNCIL ON INDUSTRIAL HEALTH

The following report has been prepared by the Committee on Industrial Ophthalmology of the Council on Industrial Health. B. Dixon Holland, M.D., *Secretary.*

THE USE OF TINTED LENSES IN NIGHT DRIVING

The Committee on Industrial Ophthalmology of the Council on Industrial Health receives many inquiries concerning the use of tinted lenses and tinted windshields for the reduction of glare in night driving.

The Committee condemns the use of tinted lenses and tinted windshields as aids in night driving. Its opinion may be summarized in the following statements:

1. The use of any "night-driving" lens or windshield, whether tinted, reflecting, or polarizing, reduces the light transmitted to the eye and renders the task of seeing at night more difficult.
2. The source of glare in night driving is the contrast between the headlights of oncoming cars and the darker surroundings. The use of tinted lenses or windshields does not reduce the contrast but reduces the intensity of illumination from both the headlights and the surroundings, thereby impairing vision.
3. There is no scientific evidence to support any claim that the use of tinted lenses or windshields improves night vision.

The members of the Committee on Industrial Ophthalmology are Drs. Edmund B. Spaeth, Chairman, Philadelphia; Franklin M. Foote, New York; Ralph S. McLaughlin, Laconia, N. H.; Joseph F. Novak, Pittsburgh; Ralph W. Ryan, Morgantown, W. Va.; and Benjamin J. Wolpaw, Cleveland.

GOVERNMENT SERVICES

AIR FORCE

Appointment of Medical Officers.—For the last two years, applications for appointment in the regular Air Force submitted by physicians who graduated from medical school in 1955 have been returned to the applicant without action. This was done because of an established limitation on the number of physicians to be appointed in the regular Air Force in any one promotion list service group. The promotion list service group in which a physician is placed in the regular Air Force is determined by his date of graduation. The situation has been restudied. Applications from any eligible physician now will be given full consideration. This is of special interest to reserve medical officers who graduated from medical school in 1955 or 1956 and whose previous applications were not favorably considered because of a lack of, or a limited number of, vacancies. Air Force regulation 36-21, dated April 29, 1959, sets forth the criteria for the appointment of physicians in the regular Air Force.

Consultants Visit Medical Installations.—Drs. Donald S. Rose, Sheldon C. Siegel, and Louis J. West, consultants to the surgeon general, visited Air Force medical installations in Korea, Japan, Okinawa, Philippine Islands, and Taiwan. Dr. Rose is professor of physical medicine at the University of Kansas Medical Center; Dr. Siegel, of the Children's Medical Group in Los Angeles, is a consultant in pediatrics; and Dr. West is head of the department of psychiatry, neurology, and behavioral sciences, University of Oklahoma Medical Center.

Personal.—Col. Aubrey L. Jennings, U. S. A. F., M. C., became director of professional services, office of the surgeon general, U. S. A. F., in August, replacing Brig. Gen. Victor A. Byrnes who retired.

ARMY

History of Internal Medicine in World War II.—Compilation of the history of the Army Medical Service's role in internal medicine during World War II will be directed by a board of 15 prominent civilian physicians and two military doctors, serving *ex officio.* Dr. Garfield G. Duncan, of Jefferson Medical College of Philadelphia, heads the advisory editorial board recently reestablished by the surgeon general. Under the editorial direction of Dr. W. Paul Havens Jr. of the same institution, the board will appraise and revise existing material and include any new material relevant to the history of internal medicine during World War II. Other members of the board include Drs. Walter Bauer, Herrman L. Blumgart, Worth B. Daniels, Eugene C. Eppinger, Joseph M. Hayman, Yale Kneeland, Howard P. Lewis, Esmond R. Long, Perrin H. Long, William Middleton, Donald M. Pillsbury, Maurice C. Pincoffs, and Henry M. Thomas Jr. The *ex officio* members are Col. Dan Crozier, M. C., chief medical consultant, Army surgeon general's office, and Col. John Boyd Coates Jr., M. C., chief of the U. S. Army medical service historical unit, Walter Reed Army Medical Center, Washington, D. C.

NAVY

Retirements.—Capt. Howard K. Sessions, director of the bureau of medicine and surgery's preventive medicine division for the past four years, was retired from the Navy Sept. 1, 1959, after completing more than 28 years active service.——Capt. Otto C. Baumgarten was retired after 20 years active service. His last assignment was at the Naval Air Station, North Island, San Diego, Calif.——Capt. Clement D. Burroughs was retired after 21 years active service. He last served at the U. S. Naval Hospital, Corpus Christi, Texas.——Capt. DeSales G. DuVigneaud was retired after 20 years active service. He was last assigned at the Naval Hospital, San Diego, Calif.——Capt. Albert G. Gibbs was retired at the Naval Amphibious Base, Little Creek, Va. ——Capt. Rexel Goodman was retired at the Naval Ammunition Depot, McAlester, Okla.——Capt. Carroll P. Hungate was retired after 21 years active service. He was last assigned at the Naval Air Station, Glenview, Ill.——Capt. Edgar Ricen was retired after 27 years active service. He was last assigned at the Naval Hospital, San Diego, Calif. ——Capt. Jesse F. Richardson was retired after 21 years active service. His last assignment was the Naval Hospital, St. Albans, L. I., N. Y.——Capt. Norman L. Barr, one of the Navy's leading authorities on space medicine and until recently the director of the bureau of medicine and surgery's astronautical division, was retired after 21 years active service.

Hearing-Conservation Program.—The noise of jet planes on carriers has been a source of increasing concern in recent years and has given rise to an organized hearing conservation program. Basic to such a program is the need to know more concerning hearing losses in persons exposed to noise of high intensity. For this reason the hearing conservation program calls for a systematic audiometry program. The medical officers on board our modern carriers have another direct interest in this problem, since the ambient noise level in the examining room on board aircraft carriers does not permit satisfactory auscultation. The need for quiet in the examining room and in the pursuit of a systematic audiometry program has given rise to a request from the USS Forrestal for an audiometric room. Earlier experience on the USS Valley Forge has proved the usefulness of a similar audiometric booth.

Personal.—Capt. Donald R. Childs was transferred from the bureau of medicine and Surgery to the National Naval Medical Center, Bethesda, Md.

PUBLIC HEALTH SERVICE

Study Team Visits Russia.—Six American scientists surveyed the progress of metabolic disease research in the Soviet Union in September. The mission was sponsored by the Public Health Service's National Institute of Arthritis and Metabolic Diseases. The members of the mission were Dr. Floyd S. Daft, director, National Institute of Arthritis and Metabolic Diseases, Bethesda, Md.; Dr. William Castle, professor of medicine and head, department of medicine of Boston City Hospital, Boston; Dr. William H. Sebrell Jr., director, Institute of Nutrition Sciences, School of Public Health and Administrative Medicine of the Faculty of Medicine, Columbia University, New York; Dr. J. Murray Luck, professor, department of biochemistry, Stanford University, Palo Alto, Calif.; Dr. Currier McEwen, associate professor of medicine, New York University College of Medicine, New York; and Dr. Clifford J. Barborka, associate professor of medicine, Northwestern University Medical School, Chicago.

Personal.—Dr. Pearce Bailey, director of the National Institute of Neurological Diseases and Blindness for the past eight years, was made director of the institute's new International Neurological Research Programs. Dr. Richard L. Masland, now assistant director, will succeed Dr. Bailey as director of the institute. In his new post, Dr. Bailey will encourage the international exchange and coordination of scientific knowledge relating to neurological and sensory disorders. He will serve in a liaison capacity with the World Federation of Neurology, an international professional organization with headquarters in Antwerp, Belgium, and as an advisor to the National Institutes of Health on international neurological developments.

FOOD AND DRUG ADMINISTRATION

Personal.—Dr. E. M. K. Geiling, former Frank P. Hixon distinguished service professor of pharmacology at the University of Chicago, was appointed to the scientific staff of the Food and Drug Administration. He will serve as medical officer and head of the pharmacodynamics branch of FDA's division of pharmacology. His responsibilities will include testing and evaluating safety data for new drugs, pesticides, food additives, coal tar colors, and cosmetics.

MEDICAL NEWS

CONNECTICUT

Conference on Iron Therapy.—A special one-day conference, Symposium on Iron Therapy, will be held Oct. 30, presented by the Yale University School of Medicine, New Haven, with the cooperation of Flint, Eaton Company, and Kinney and Company, Inc. The program includes the following:

Introductory Remarks, Dr. Stuart C. Finch, New Haven.
Adult Iron Metabolism, Dr. Charles E. Rath, Jr., Washington, D. C.
Iron Requirements in Childhood, Dr. David H. Clement, New Haven.
Iron Absorption, Dr. Robert B. Chodos, Syracuse, N. Y.
Tissue Iron Metabolism, Dr. Ernest Beutler, Chicago.
Iron Toxicity, Dr. Willard A. Krehl, New Haven.

Panels on iron therapy will be held in the afternoon, with Dr. Finch as moderator. This conference has been planned for internists, pediatricians, obstetricians, and other physicians interested in problems related to iron therapy. Total enrollment will be limited. Only those who have registered in advance will be admitted. For information and registration, write Assistant Dean, Postgraduate Medical Education, Yale University School of Medicine, 333 Cedar St., New Haven 11, Conn.

ILLINOIS

Dr. Schiller Honored.—Dr. Walter Schiller, Evanston, retired Chicago and New York pathologist, originator of the Schiller test for the detection of cancer of the uterus, was honored by the United States Section, International College of Surgeons, at the recent 24th annual congress in Chicago. A certificate of recognition of his outstanding work was presented to him at a luncheon in the Palmer House. Because of illness, the award was received for him by Mrs. Schiller. Dr. Schiller was professor of pathology at the University of Vienna before coming to the United States 20 years ago.

Chicago

Annual Lectureship.—Phi Delta Epsilon Fraternity's 11th annual lectureship will be given this year by Dr. Albert Dorfman, professor of pediatrics, University of Chicago, The School of Medicine, and director of La Rabida Sanitarium. On Nov. 2, 1 p. m., Dr. Dorfman will present "Medical and Biological Implications of Connective Tissue" at the Chicago Medical School's Kling Auditorium, Mt. Sinai Hospital. On Nov. 3, 4 p. m., he will speak on "The Metabolism of Mucopolysaccharides and Disturbances in Gargoylism" at Northwestern University Medical School's Thorne Hall. Dr. Dorfman's final lecture will be held on Nov. 4, 1 p. m., at the University of Illinois College of Medicine in Room 221, DMP Building, when he will present "The Diagnosis and Treatment of Rheumatic Fever."

Exhibit of Medical Books.—Books which laid the foundation for modern day medicine are on display in a new exhibit at the Harper Memorial Library of the University of Chicago. The exhibition was organized in honor of Dr. Morris Fishbein. The "Great Works in Medicine" exhibition ranges from 16th century essays on self medication to Edward Jenner's description of his work in creating the smallpox vaccine. The exhibit is open to the public. Many of the books were presented by Dr. and Mrs. Fishbein to the University of Chicago. Supplementing these books are selections from the Library's other rare medical collections. One of the rarest books represented in the exhibit is that of a 16th century Spanish physician, Michael Servitus. The exhibition is grouped in sections devoted to significant works in anatomy, medicine, obstetrics, pathology, and surgery.

LOUISIANA

Centennial for State University.—Louisiana State University will celebrate its 100th anniversary during the academic year 1959-1960 with a series of events "commemorating the university's accomplishments in scholarship and public service." The centennial observance formally begins on Oct. 22 with a two-day program dedicating the university's 3.5-million-dollar library completed in 1958. Featured programs throughout the school year include a series of banquets and symposiums on commerce and industry, education, law and medicine, science and engineering, and agriculture; four lectures in a humanities series; and an address by U. S. Senator Russell Long of Louisiana at the annual spring honors day convocation in April. Endowed by federal land grants of 1806, 1811, and 1827, LSU was established by the state constitution of 1845 and opened its doors for instruction Jan. 2, 1860, as the Louisiana State Seminary of Learning. The university's greatest period of growth came following a "greater University" movement which began in 1914 with demands for enlarged agricultural facilities. The present campus was completed in 1932.

Physicians are invited to send to this department items of news of general interest, for example, those relating to society activities, new hospitals, education, and public health. Programs should be received at least three weeks before the date of meeting.

Other campuses include the School of Medicine (established in 1931) and an undergraduate liberal arts division (established in 1958) in New Orleans.

MASSACHUSETTS

Laboratories for Mental Research.—A gift of one million dollars from the Joseph P. Kennedy Jr. Memorial Foundation for the establishment of the Joseph P. Kennedy Jr. Laboratories for Research on Mental Retardation at the Massachusetts General Hospital, Boston, was announced. Of this gift one-half will be spent for the construction of these laboratories and the other half will serve as an endowment to provide continuing operating funds. This is the first of the endowed scientific researchships planned under the anniversary program in observance of the 150th birthday of the Massachusetts General Hospital in 1961. The new laboratories will be concerned with the causes, treatment, and prevention of diseases of the brain occurring during infancy and childhood, and will be directed by Dr. Raymond D. Adams, Bullard Professor of Neuropathology, Harvard Medical School.

NEBRASKA

Annual Assembly in Omaha.—The 27th annual assembly of the Omaha Midwestern Clinical Society will be held Nov. 2-5 at the Civic Auditorium, Omaha. The program includes the following guest speakers: Dr. Simon Rodbard, Buffalo; Dr. Louis M. Hellman, Brooklyn; Dr. Sumner S. Cohen, Oak Terrace, Minn.; Dr. David W. Kramer, Philadelphia; Dr. Leo Alexander, Boston; Dr. Roscoe J. Kennedy, Cleveland; Dr. Claude E. Welch, Boston; Dr. William J. Engel, Cleveland; Dr. Claude N. Lambert, Chicago; Dr. John T. Reynolds, Chicago; and Dr. Lawson Wilkins, Baltimore. Three panel discussions are planned: Antibiotics—Complications of Indiscriminate Use, Shock—Resuscitation and First Aid Survival Management, and Common Fractures. A symposium, "This Is What's New," is also planned. Informal discussions, scientific and technical exhibits, and motion pictures are arranged. For information, write Dr. John H. Brush, 1613 Medical Arts Bldg., Omaha 2.

NEW JERSEY

Encephalitis Epidemic.—The number of reported deaths in an epidemic of encephalitis in southern and central New Jersey rose to 18 Sept. 30. Dr. Roscoe P. Kandle, state health commissioner, stated that the epidemic was declining. The New Jersey State Health Department reported 28 suspected cases of eastern equine encephalitis, with one suspected case reported from the northern town of Paramus. The department said five of the total cases were definitely confirmed as encephalitis. Of these, four were fatal.

Physicians Meet in Jersey City.—The 14th regional meeting of the American College of Physicians will be held in Murdoch Hall, Jersey City Medical Center, Jersey City, Nov. 11. The program will be primarily clinical and will be presented by faculty members of the department of medicine, Seton Hall College of Medicine. The program will be moderated by Dr. Harold J. Jeghers, Jersey City, chairman of the department. Eleven papers are scheduled. Dr. Howard P. Lewis, Portland, Ore., president of the college, will be guest speaker at the evening dinner session. For information, write Dr. Louis L. Perkel, 131 Kensington Ave., Jersey City 4, N. J.

NEW YORK

New York City

Award Rehabilitation Fellowship to Colombian Physician.—The awarding of the Bell Greve Memorial Fellowship for Rehabilitation to a physician from Colombia was announced by Dr. George G. Deaver, professor of rehabilitation, College of Medicine and Rehabilitation, New York University–Bellevue Medical Center. The Colombian physician is Dr. Carlos Mora–Mora, of Bogota. Dr. Mora–Mora is currently undertaking postgraduate training in orthopedic surgery at the Georgia Warm Springs Foundation, Warm Springs, Ga. His training under the Bell Greve fellowship will begin July 1, 1960, and will be undertaken at the Institute of Physical Medicine and Rehabilitation, New York University–Bellevue Medical Center. The Bell Greve Foundation was established by the World Rehabilitation Fund in cooperation with the International Society for the Welfare of Cripples to honor the memory of Miss Bell Greve, who served as Secretary General of the International Society for the Welfare of Cripples. The Colombian affiliate of the international society is the Instituto Colombiano de Rehabilitacion para Ninos Invalidos and its national secretary is Mrs. Elvira de Saldarriaga. Since Dr. Howard A. Rusk, director of the Institute of Physical Medicine and Rehabilitation, visited Colombia in 1955, 10 trainees, including physicians, physical therapists, nurses, and brace makers from Colombia have undertaken long-term postgraduate training in rehabilitation at the institute.

OHIO

Visiting Professor.—Loren C. Eiseley, Ph.D., of Philadelphia, will serve this fall as the second visiting professor of the philosophy of science in the University of Cincinnati College of Medicine. Dr. Eiseley, University of Pennsylvania anthropologist, will be at Cincinnati University Oct. 19 through Nov. 5. He will give a series of free public lectures on the general theme, "Man's Quest for Certainty." Arrangements for his visit are being made by Dr. Charles D. Aring, director, department of neurology.

PENNSYLVANIA

Organize Physicians Art Association.—The first exhibition of the newly organized Pennsylvania Physicians Art Association will be shown Oct. 20-23 at the 109th annual session of The Medical Society of the State of Pennsylvania in the Penn-Sheraton Hotel, Pittsburgh, with examples of oils, water colors, drawings, photographs, sculptures, and crafts created by physicians from all sections of the state. Headed by Dr. Lewis M. Johnson, Lancaster, president of the American Physicians Art Association, the group will hold its first organization meeting during the Pittsburgh showing. Temporary officers of the Pennsylvania Physicians Art Association include Dr. Johnson, chairman; and Drs. Harry T. Kessler, David Budin, and Helen Ryan, of Philadelphia; Julius I. Newmark, New Castle; William E. B. Hall, Chambersburg; and Raymond M. Lauer, York.

Philadelphia

Annual Lectureship.—The ninth annual Pemberton Memorial Lectureship, "The Benefits, Limitations and Problems of the Treatment of Rheumatoid Arthritis with Corticosteroids, Gold Salts and Salicylates: Analysis of 10 Years Study," will be given at the Philadelphia County Medical Society Building, Oct. 28, 8:15 p. m., by Dr. Richard H. Freyberg, professor of clinical medicine, Cornell University Medical College, New York City. The lectureship is under the joint sponsorship of the Eastern Pennsylvania chapter of the Arthritis and Rheumatism Foundation, the Philadelphia Rheumatism Society, and the arthritis section of the Philadelphia County Medical Society.

GENERAL

Meeting Cancelled.—The International College of Surgeons announced that the Mid-Atlantic meeting of the United States Section, International College of Surgeons, scheduled to be held at Hot Springs, Va., Nov. 16-18, has been cancelled.

Meeting on Preventive Medicine.—The American College of Preventive Medicine will meet Oct. 21-22 in Atlantic City, N. J. The third annual lectureship on preventive medicine will be given the evening of Oct. 21 by Dr. Thomas Francis Jr., Ann Arbor, Mich., entitled, "Research in Preventive Medicine: Now and Then." Included in the scientific program are the following papers:

Occupational Health—A Challenge for Local Health Departments, Dr. Huntington Williams, Baltimore.
Smoking and Disease, Dr. Abraham M. Lilienfeld, Baltimore.
An Epidemiological View of Mental Disorders, Dr. Ernest M. Gruenberg, New York City.

For information, write Dr. John J. Wright, Secretary-Treasurer, American College of Preventive Medicine, P. O. Box 1267, Chapel Hill, N. C.

Prevalence of Poliomyelitis.—According to the National Office of Vital Statistics, the following number of reported cases of poliomyelitis occurred in the United States, its territories and possessions in the weeks ended as indicated:

Area	Sept. 19, 1959 Paralytic Type	Sept. 19, 1959 Total Cases	Sept. 20 1958 Total

Annual Meeting of Industrial Hygiene.—The Industrial Hygiene Foundation will hold its 24th annual meeting at the Mellon Institute, Pittsburgh, Oct. 28-29. The program is arranged for engineering, legal, medical, chemical-toxicological, and management conferences, with a joint engineering-legal conference planned for Oct. 28. Chairmen of the various conferences will be Philip Drinker, Sc.D., Boston; Lawrence A. Coleman, Allied Chemical Corporation; Dr. Adolph G. Kammer, Pittsburgh; Anna M. Baetjer, Sc.D., Baltimore; William P. Yant, Sc.D., Mine Safety Appliances Company; and Dr. Norbert J. Roberts, New York City. Advanced registration is requested. For information and registration, write the Industrial Hygiene Foundation, 4400 Fifth Ave., Pittsburgh 13.

Southeastern Meeting of Physicians.—The American College of Physicians Southeastern Regional Meeting, for Alabama, Florida, Georgia, South Carolina, and Cuba, will be held at the Hotel Columbia, Columbia, S. C., Oct. 30-31. Presiding at the opening session will be Dr. Orlando B. Mayer, Columbia, governor for South Carolina, and Dr. Carlos F. Cardenas, Havana, governor for Cuba. The program includes a total of 20 papers. Honored guest at the meeting will be Dr. Howard P. Lewis, Portland, Ore., president of the college, who will present an address at the banquet Oct. 30, 8 p. m. Entertainment includes golfing and fishing, and a ladies' program is arranged. Registration fee is $10. For information, write the American College of Physicians, 4200 Pine Street, Philadelphia 4.

Meeting of Obstetricians and Gynecologists.—District IV of the American College of Obstetricians and Gynecologists will hold its annual meeting at the Americana Hotel, Bal Harbour, Miami Beach, Fla., Oct. 30-31. The Miami Obstetric and Gynecological Society will be the host. The district comprises the District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia, Puerto Rico, and Virgin Islands. The scientific program will consist of 16 papers and two panels. Dr. William N. Thornton Jr., Charlottesville, Va., chairman of District IV, will call the meeting to order. Dr. Ralph W. Jack, Miami, president of the Florida Medical Association and second vice-president of ACOG, will give the address of welcome. A dinner meeting of the advisory council the evening of Oct. 29, will be preceded by a patio party. For information, write Dr. Thornton at the University of Virginia School of Medicine, Charlottesville, Va.

Cardiology Meeting in Philadelphia.—The eighth interim meeting of the American College of Cardiology will be held Oct. 23-25 at the Benjamin Franklin Hotel, Philadelphia. The scientific program will include 16 fireside conferences the morning of Oct. 23. On Oct. 25, a symposium, "Cardiac Resuscitation," will be moderated by Dr. Osler A. Abbott, Atlanta, Ga., president of the college, and by Dr. Ernest Craige, Chapel Hill, N. C., and a second symposium, "Mechanical Methods of Assistance to the Failing Circulation," will be moderated by Dr. Abbott. Dr. Pierre M. Galletti, Lausanne, Switzerland, will present "Physiologic Principles of Partial Extracorporeal Circulation." For information, write the American College of Cardiology, Empire State Building, 350 Fifth Ave., New York 1.

Meeting on Tropical Medicine in Indianapolis.—The eighth annual meeting of the American Society of Tropical Medicine and Hygiene will be held Oct. 28-31 at the Claypool Hotel, Indianapolis. The scientific program includes 74 papers and participants from Mexico, India, Guatemala, Japan, Korea, Colombia, and Nigeria. Tours of the Indiana University Medical School and the Lilly Research Laboratories are planned for the morning of Oct. 28. The presidential address, by Dr. Lewis W. Hackett, Berkeley, Calif., will follow presentation of the Bailey K. Ashford Award at the annual dinner, Oct. 30, 7 p. m. A motion-picture session and commercial and scientific exhibits are arranged. A ladies' program is planned. For information, write Dr. Rolla B. Hill Jr., 3575 St. Gaudens Rd., Miami 33, Fla., Secretary-Treasurer.

Postgraduate Caribbean Cruise.—New York Medical College, Flower and Fifth Avenue Hospitals, New York City, will sponsor a 15-day postgraduate cruise to the Caribbean in conjunction with its centennial celebration. Dr. Linn J. Boyd, director of the division of graduate studies, states that the cruise will leave New York Feb. 25, 1960, and visit St. Thomas, La Guaira, Curacao, Cristobal, Kingston, and Havana, spending six days in these ports of call and nine days at sea, aboard the S. S. Hanseatic, a vessel owned by the Hamburg Atlantic Line, West Germany. Sessions of three hours held each morning while at sea and during one afternoon will include lectures, clinical pathological conferences, lantern slide projections and films and will comprise 30 hours of instructions. Physicians may be accompanied by their wives. For information, write the Division of Graduate Studies, New York Medical College, Flower and Fifth Avenue Hospitals, Fifth Avenue at 106th Street, New York 29.

CORRECTIONS

Bishydroxycoumarin Toxicity.—On page 2182 of the Aug. 29 issue, right-hand column, the sentence beginning on line 5 should read "Medication at discharge included bishydroxycoumarin, 50 mg. orally every day."

Dr. Littig's Father Was Section Chairman.—The statement in the obituary of Dr. Lawrence V. Littig, Sept. 26, page 447, that he was chairman of the Section on Hospitals of the American Medical Association in 1916-1917 was erroneous. It was Dr. Littig's father, Dr. Lawrence W. Littig, who died in 1918.

EXAMINATIONS AND LICENSURE

EDUCATIONAL COUNCIL FOR FOREIGN MEDICAL GRADUATES, INC.

Educational Council for Foreign Medical Graduates: Stations around the world. March 16, 1960 and Sept. 21, 1960. Exec. Director, Dr. Dean F. Smiley, 1710 Orrington Ave., Evanston, Ill.

NATIONAL BOARD OF MEDICAL EXAMINERS

National Board of Medical Examiners: Part I, Various Cities, June 21-22 and Sept. 7-8. Part II, Various Cities, April 19-20. Applications must be received at least six weeks before the date of the examination. Exec. Sec., Dr. John P. Hubbard, 133 South 36th St., Philadelphia.

BOARDS OF MEDICAL EXAMINERS

Alabama: *Examination.* Montgomery, June 21-23, 1960. Sec., Dr. D. G. Gill, State Office Bldg., Montgomery.

Alaska:* On application in Anchorage or Fairbanks. Sec., Dr. W. M. Whitehead, 172 South Franklin St., Juneau.

Arkansas:* *Examination and Reciprocity.* Little Rock, Nov. 5-6. Sec., Dr. Joe Verser, Harrisburg.

California: *Written.* Sacramento, October 19-22. *Oral.* San Francisco, November 14. *Oral and Clinical.* San Francisco, Nov. 15. Sec., Dr. Louis E. Jones, Room 536, 1020 N Street, Sacramento.

Colorado:* *Examination.* Denver, Dec. 8-9. *Reciprocity.* Denver, Oct. 14. Exec. Sec., Miss Mary M. McConnell, 715 Republic Bldg., 1612 Tremont Place, Denver 2.

Connecticut:* *Examination.* Hartford, Nov. 10-12. Sec. to the Board, Dr. Stanley B. Weld, 160 St. Ronan St., New Haven.

Delaware: *Examination.* Dover, Jan. 12-14. *Endorsement.* Dover, Jan. 21. Sec., Dr. Joseph S. McDaniel, Professional Bldg., Dover.

District of Columbia:* *Examination.* Washington, Dec. 14-15. *Reciprocity.* Washington, Sept. 14. Deputy Director, Mr. Paul Foley, 1740 Massachusetts Ave., Washington 6.

Florida:* *Examination.* Miami Beach, Nov. 22-24. Sec., Dr. Homer L. Pearson, 901 N.W. 17th St., Miami 36.

Guam: *Subject to Call.* Act. Sec., Dr. F. L. Conklin, Agana.

Hawaii: *Examination.* Honolulu, Jan. 11-12. Sec., Dr. I. L. Tilden, 1020 Kapiolani St., Honolulu.

Idaho: *Examination* and *Reciprocity.* Boise, Jan. 11, 12, 13. Exec. Sec., Mr. Armand L. Bird, 364 Sonna Bldg., Boise.

Indiana: *Examination.* Indianapolis, June 1960. *Reciprocity.* Indianapolis, fourth Wednesday of each month. Ex. Sec., Miss Ruth V. Kirk, 538 K. of P. Bldg., Indianapolis.

Kansas:* *Examination and Reciprocity.* Kansas City, Jan. 15-16. Sec., Dr. F. J. Nash, New Brotherhood Bldg., Kansas City.

Kentucky: *Examination.* Frankfort, Dec. 14-15. Asst. Sec., Mrs. Ray Wunderlich, 620 South Third St., Louisville 2.

Louisiana: *Examination and Reciprocity.* New Orleans, Dec. 3-5. Sec., Dr. Edwin H. Lawson, 930 Hibernia Bank Bldg., New Orleans 12.

Maine: *Examination* and *Reciprocity.* Portland, Nov. 10. Sec., Dr. Stephen A. Cobb, Stanford.

Maryland: *Examination.* Baltimore, Dec. 8-11, Sec., Dr. Frank K. Morris, 1211 Cathedral St., Baltimore 1.

Massachusetts: *Examination.* Boston, Jan. 12-15. Sec., Dr. David W. Wallwork, Room 37, State House, Boston.

Michigan:* *Examination.* Lansing, Oct. 26-28. Ex. Sec., Dr. E. C. Swanson, 118 Stevens T. Mason Bldg., Lansing.

Minnesota:* *Examination.* Jackson, June 1960. *Reciprocity.* Jackson, Dec. 7, Sec., Dr. A. L. Gray, Old Capitol, Jackson.

Minnesota:* *Examination and Reciprocity.* St. Paul, Oct. 20-22. Sec., Dr. F. H. Magney, 230 Lowry Medical Arts Bldg., St. Paul 2.

Nebraska:* *Examination.* Omaha, June 13-15, 1960. Dir., Bureau of Examining Boards, Room 1009, State Capitol Bldg., Lincoln 9.

New Jersey: *Examination.* Trenton, Oct. 20-23 and Jan. 19-22. *Reciprocity.* Monthly, Sec., Dr. Royal A. Schaaf, 28 West State St., Trenton.

New Mexico:* *Examination and Reciprocity.* Santa Fe, Nov. 16-17. Sec., Dr. C. Derbyshire, 227 East Palace Ave., Santa Fe.

New York: *Examination.* Albany, Buffalo, New York and Syracuse, Dec. 8-11. Sec., Dr. Stiles D. Ezell, 23 South Pearl St., Albany.

North Dakota: *Examination.* Grand Forks, Jan. 6-8. *Reciprocity.* Grand Forks, Jan. 9. Sec., Dr. C. J. Glaspel, Box 228, Grafton.

Ohio: *Examination.* Columbus, Dec. 15-17. *Endorsement.* Columbus, Oct. 5. Sec., Dr. H. M. Platter, 21 W. Broad St., Columbus 15.

Oregon:* *Examination.* Portland, Oct. 22-24. Ex. Sec., Mr. Howard I. Bobbitt, 609 Failing Bldg., Portland.

Pennsylvania: *Examination.* Philadelphia, January. Sec., Mrs. Margaret G. Steiner, Box 911, Harrisburg.

Texas:* *Examination.* Fort Worth, Dec. 3-5. Sec., Dr. M. H. Crabb, 1714 Medical Arts Bldg., Fort Worth 2.

Utah: *Examination.* Salt Lake City, July 6-8. *Reciprocity.* Salt Lake City, Nov. 17. Director, Mr. Frank E. Lees, 324 State Office Bldg., Salt Lake City 1.

Virginia: *Examination and Reciprocity.* Richmond, Dec. 2-4. Address: Board of Medical Examiners, 631 First St. S. W., Roanoke.

Virgin Islands: *Examination.* Charlotte Amalie, Nov. 12-13. Sec., Dr. Benjamin Nath, Charlotte Amalie, St. Thomas.

Washington:* *Examination.* Seattle, Jan. 11-13. Administrator, Professional Division, Capitol Bldg., Olympia.

West Virginia: *Examination.* Charleston, January. Sec., Dr. Newman H. Dyer, State Office Bldg., No. 3, Charleston 5.

Wisconsin:* *Examination.* Madison, Jan. 14-16. *Reciprocity.* Madison, Oct. 23. Sec., Dr. Thomas W. Tormey, Jr., 1140 State Office Building, 1 West Wilson St., Madison.

BOARDS OF EXAMINERS IN THE BASIC SCIENCES

Alaska: *Examination and Reciprocity.* Juneau, November. Sec., Dr. R. Harrison Leer, Alaska Office Bldg., Juneau.

District of Columbia: *Examination.* Washington, Nov. 23-24. Deputy Director, Mr. Paul Foley, 1740 Massachusetts Ave., Washington 6.

Florida: *Examination.* Gainesville, Nov. 7. Sec., Mr. M. W. Emmel, Box 340, Gainesville.

Kansas: *Examination.* Pittsburg, Nov. 6-7. Sec., Dr. Leon C. Heckert, Kansas State College, Pittsburg.

New Mexico: *Examination.* Santa Fe, Oct. 18, *Reciprocity.* Santa Fe, Oct. 7. Sec., Mrs. M. Cantrell, P. O. Box 1522, Santa Fe.

Rhode Island: *Examination.* Providence, Nov. 18. *Reciprocity.* Providence, Nov. 4. Administrator, Mr. Thomas B. Casey, 366 State Office Bldg., Providence.

South Dakota: *Examination.* Vermillion, Dec. 4-5. Dr. Gregg M. Evans, 310 East 15th St., Yankton.

Washington: *Examination.* Seattle, Jan. 6-7. Sec., Mr. Thomas A. Carter, Capitol Bldg., Olympia.

Wisconsin: *Examination.* Milwaukee, Dec. 5. Sec., Mr. Wm. H. Barber, 621 Ranson St., Ripon.

---

*Basic Science Certificate required.

DEATHS

Beach, Channing Elias, Buffalo, N. Y.; University of Buffalo School of Medicine, 1905; died July 22, aged 88.

Braunlin, Carl Gustave, Portsmouth, Ohio; Miami Medical College, Cincinnati, 1909; member of the American Academy of General Practice; past-president of the Hempstead Academy of Medicine; associated with the Portsmouth General Hospital, where he died July 9, aged 75.

Brown, Hadley Cyprian, El Reno, Okla.; College of Physicians and Surgeons of Chicago, School of Medicine of the University of Illinois, 1900; past-president of the Canadian County Medical Society; veteran of World War I; associated with the Park View Hospital, where he died July 14, aged 83.

Bussell, James Alexander Ⓜ Rochelle, Ga.; Atlanta Medical College, 1893; died July 15, aged 86.

Cahill, George Francis Ⓜ New York City; born in New Haven, Conn., Jan. 1, 1890; Yale University School of Medicine, New Haven, 1911; interned at the Bellevue Hospital, where he was later on the staff; resident surgeon at the New York Post-Graduate Medical School and Hospital; at one time on the faculty of the New York Post-Graduate Medical School; since 1955 professor emeritus of urology, for many years professor of urology at the Columbia University College of Physicians and Surgeons, where he joined the faculty in 1917 as an instructor in urology; served as president and trustee of the American Board of Urology; past-president of the Society of Clinical Urology and the American Urological Association; member of the International Society of Urology and in 1952 president of the ninth congress in New York City; member of the American Association of Genito-Urinary Surgeons, Industrial Medical Association, Harvey Society, New York Academy of Medicine, Sigma Rho Sigma, and the New York Urological and Surgical Society; fellow of the American College of Surgeons, of which he was a governor, New York Academy of Sciences, and the American Association for the Advancement of Science; served overseas during World War I; together with Dr. Meyer M. Melicow, received a gold medal for their exhibit on "Tumors of the Adrenal Gland" at the 100th anniversary meeting of the American Medical Association, and the exhibit was awarded first prize by the American Urological Association; in 1948 received the Trimble Medal from the Maryland Medical and Surgical Society; consulting urologist, and from 1946 to 1949 president of the medical board of the Presbyterian Hospital, where for many years he was director of the J. Bentley Squier Urological Clinic, which he helped to build up; from 1946 to 1952 member of the special advisory committee of the Veterans Administration; consulting urologist, Vanderbilt Clinic, New York Orthopedic Dispensary and Hospital in New York City, Tuxedo Memorial Hospital in Tuxedo Park, and the Yonkers (N. Y.) General Hospital; consulting surgeon at the Willard Parker Hospital; served as director of urology at the Francis Delafield Hospital; among his major contributions was his classification of tumors of the adrenals and, with Dr. Marcel Goldenberg, the initiation of a test for pheochromocytoma; in 1956 received an honorary doctor of science degree from Columbia University; died in the Harkness Pavilion of the Columbia Presbyterian Medical Center July 24, aged 69.

Carter, Carl Estes Ⓜ Austin, Texas; Baylor University College of Medicine, Dallas, 1924; member of the American Academy of General Practice; veteran of World War I; associated with the Brackenridge, Seton, St. David's, and Holy Cross hospitals; a director of Texas State Bank; died July 21, aged 73.

Clark, Dwight Edwin Ⓜ Chicago; born in Mount Eaton, Ohio, July 28, 1910; University of Rochester School of Medicine and Dentistry, Rochester, N. Y., 1937; since July, 1958, chairman of the department of surgery, in 1951 appointed professor of surgery, and in 1947 associate professor at the University of Chicago, where from 1937 to 1944 he was a surgical intern, fellow, resident, and instructor in the university clinics; member of the founders group of the American Board of Surgery; member of the American Surgical Association, Society of University Surgeons, Central Society for Clinical Research, American Goiter Association, Society of Experimental Biology and Medicine, American Association of Cancer Research, Chicago Surgical Society, Institute of Medicine of Chicago, Sigma Xi, and Alpha Omega Alpha; fellow and member of the board of governors of the American College of Surgeons; vice-president of the Society of Nuclear Medicine; served in the U. S. Army Medical Corps from 1944 to 1947, assigned to the Manhattan Project, Oak Ridge, Tenn., part of the period as chief of surgery and commanding officer of the corps' hospital at Oak Ridge; his work centered on research and clinical use of radioactive iodine in the treatment of diseases of the thyroid, including cancer; senior attending surgeon and secretary of the department at the Albert Merritt Billings Hospital, where he died July 24, aged 48.

Ⓜ Indicates Member of the American Medical Association.

Cooley, Judson Cassius Ⓜ Sandy Lake, Pa.; Jefferson Medical College of Philadelphia, 1897; died in the Mercer Cottage Hospital in Mercer July 23, aged 86.

Crowell, Isabel, Monrovia, Calif.; University of Southern California School of Medicine, Los Angeles, 1906; served on the staff of the Los Angeles County Hospital in Los Angeles; died in the Alta Vista Hospital in Pasadena July 23, aged 79.

Darnall, Rolland Fulton Ⓜ Little Rock, Ark.; Medical College of Indiana, Indianapolis, 1895; member of the American Psychiatric Association; past-president of the Pulaski County Medical Society; formerly associated with the Arkansas State Hospital for Nervous Diseases; served as medical superintendent of the Salasco Sanitarium School; on the staffs of the St. Vincent Infirmary and Arkansas Baptist Hospital; died July 20, aged 87.

Draughn, Duncan McInnis Ⓜ Moore Haven, Fla.; College of Physicians and Surgeons, Baltimore, 1913; veteran of World War I; died in Arlington, Va., July 16, aged 72.

Dresel, Irmgard Ⓜ Far Hills, N. J.; Ludwig–Maximilians–Universität Medizinische Fakultät, München, Bavaria, Germany, 1920; on the staff of the All Souls Hospital in Morristown, where she died July 23, aged 63.

O'Donoghue, Archibald Fairbairn Ⓜ Sioux City, Iowa; State University of Iowa College of Medicine, Iowa City, 1919; specialist certified by the American Board of Orthopaedic Surgery; member of the Clinical Orthopaedic Society and the American Academy of Orthopaedic Surgeons; fellow of the International College of Surgeons and the American College of Surgeons; member of the staffs of the Methodist, St. Joseph Mercy, and St. Vincent's hospitals; in 1944 received an honorary doctor of science degree from Morningside College; died in the University Hospital, Iowa City, July 26, aged 63.

Pope, Herbert Lee Ⓜ Knoxville, Tenn.; University of Tennessee College of Medicine, Memphis, 1926; member of the American Psychiatric Association; veteran of World War II; associated with the Eastern State Hospital; died in the Fort Sanders Presbyterian Hospital July 14, aged 57.

Sawyer, Edward Keyes, Malden, Mass.; Harvard Medical School, Boston, 1899; died in the Malden Hospital July 22, aged 90.

Schoolfield, Edward Raymond Ⓜ Bucyrus, Ohio; Medical College of Ohio, Cincinnati, 1899; veteran of World War I; on the staff of the Bucyrus City Hospital; died July 18, aged 82.

Schutte, Raymond Grover Ⓜ Kenton, Ohio; Ohio State University College of Medicine, Columbus, 1915; fellow of the International College of Surgeons and the American College of Surgeons; associated with the Hardin Memorial and San Antonio hospitals; veteran of World War I; died at Bass Lake, Interlochen, Mich., July 18, aged 71.

Sharrer, Gerald Leslie Ⓜ Aurora, Ill.; Loyola University School of Medicine, Chicago, 1938; veteran of World War II; interned at St. Francis Hospital in Evanston, Ill.; died July 23, aged 51.

Sheffield, Harry Joseph Ⓜ Frankfort, N. Y.; Syracuse University College of Medicine, 1904; past-president of the Herkimer County Medical Society; served one term as coroner of Herkimer County; retired health officer; associated with the Ilion (N. Y.) Hospital; director of the Citizens Bank; died July 19, aged 79.

Stevens, Harry Harrington Ⓜ Yonkers, N. Y.; Columbia University College of Physicians and Surgeons, New York City, 1905; also a graduate in pharmacy; served as school physician in Tuckahoe; for many years associated with the Lawrence Hospital in Bronxville; died in Knoxville, Tenn., July 18, aged 80.

Tartikoff, George Ⓜ Brooklyn; University of Maryland School of Medicine and College of Physicians and Surgeons, Baltimore, 1939; specialist certified by the American Board of Obstetrics and Gynecology; instructor of obstetrics and gynecology at the State University of New York Downstate Medical Center College of Medicine; associated with the Maimonides, Coney Island, and Jewish Chronic Disease Hospital; died in the Maimonides Hospital July 22, aged 45.

Thiessen, Edward Herman Ⓜ Kansas City, Mo.; University of Kansas School of Medicine, Kansas City, 1921; member of the executive staff of St. Luke's Hospital; died July 15, aged 63.

Thomas, Luther Allen Ⓜ Painted Post, N. Y.; University of Buffalo School of Medicine, 1906; also a graduate in pharmacy; past-president of the Steuben County Medical Society; associated with the Corning Hospital, where he was president of the board of directors; president of the First National Bank; died in the Corning (N. Y.) Hospital July 18, aged 78.

Thorn, Edwin Charles Ⓜ Greenfield, Mass.; University of Vermont College of Medicine, Burlington, 1933; member of the American Academy of General Practice; served an internship and residency at Stamford (Conn.) Hospital; secretary-treasurer of the Franklin District Medical Society; died July 19, aged 53.

Vance, W. Brooks Ⓜ New York City; University of Nebraska College of Medicine, Omaha, 1923; fellow of the American College of Chest Physicians; associated with Lenox Hill and St. Clare's hospitals; died Aug. 2, aged 60.

FOREIGN LETTERS

FRANCE

International Federation for Medical Electronics.—At the Second International Conference on Medical Electronics in Paris in June the International Federation for Medical Electronics was formed. Its object is to encourage the development and dissemination of knowledge in medical electronics throughout the world. To do this the federation will sponsor international congresses at regular intervals, collect and publish literature, and encourage research in medical electronics. Professor Grashchenkov, vice-president of the World Health Organization, announced that the General Assembly of the United Nations had passed a resolution calling on the secretary general to make plans for an International World Health Year. He also said that medical electronics had already made great strides in diagnosis, therapy, and research.

Space Flight.—At the same meeting, Milton Berkowitz and others stated that to make space flight safe for human travelers it is essential to know what physiological effects will be produced by the launching and subsequent orbiting and return of space vehicles. The first manned space vehicles will therefore contain electronic apparatus for automatically monitoring and transmitting to the ground physiological information on the "pilot's" respiration, blood pressure, and skin temperature from which his body condition and reactions to unusual stresses will be seen immediately. Such information will also be necessary for the future design of space vehicles insofar as it will show what operations the pilot will be able to perform in the special conditions of space flight, as, for example, weightlessness.

Artificial Hearing Aids.—At the same meeting, Dr. André Djourno stated that when the ears of a deaf person are completely insensible to external sounds, even through bone conduction, the only possible way to produce the sensation of hearing is to stimulate the auditory nerves in the brain directly by electrical signals. This entails making delicate electrical connections to the nerve fibers, but it is impractical to have wires trailing from the head for this purpose. The speaker, therefore, has embedded small, sealed pick-up coils inside the deaf person's head, with the wire ends connected to the appropriate nerve fibers. Electrical signals are then transmitted to these coils from outside the head by electromagnetic induction so that it is only necessary for the patient to remain within the influence of a magnetic field. Elementary sensations of hearing have been produced, mainly on the basis of rhythm and pattern.

Muscle Amplifiers.—At the same meeting, L. H. Montgomery and S. E. Stephenson Jr. described a series of muscle potential amplifiers built for such special purposes as control of artificial respiration and timing the beat of the auricles and ventricles. The latter is used as a supportive measure during transient block following cardiac surgery. The final application was that of controlling artificial limbs or prostheses by muscle potentials from the partially paralyzed muscle which in turn is used to operate a valve that controls high pressure compressed gas from a small tank. With the compressed gas used as the primary power the application of this principle is limited only by the skill of the designer of the prosthetic device.

A Swallowable Transmitter.—At the same meeting, Prof. H. B. Sprung described an ingestible but indigestible intestinal transmitter that, in its passage through the intestinal tract, transmits information regarding pressures to which it is subjected, pressures occurring in the course of its simultaneous forward motion, position changes, variations in the pH of the surrounding medium, and temperature variations. Its use indicated that the fundus and corpus of the stomach served for mixing of food but that no measurable pressures were involved in the process. Position recording showed that the mixing of the stomach contents in the fundus was controlled by the motions of the diaphragm whereas the corpus possessed its own specific rhythmic motor activity. Pressures up to 200 cm. H_2O were recorded in the pyloric antrum. The prominent characteristic of small intestinal activity was the multiperiodic pressure variation. Small intestinal motility was regulated by tonus increase. The pressure variations in the large intestine were of the single-period type. Variations in the pH of the upper duodenum were determined by the rhythm of discharges of food from the stomach.

Echo-Encephalography.—At the same meeting, D. Gordon stated that ultrasonic echo techniques have been used for five years to detect displacements and deformities of the brain without subjecting the patient to the risk and delay involved in

---

The items in these letters are contributed by regular correspondents in the various foreign countries.

pneumography and angiography. The most constant echo recorded is that of a midline structure believed to be the spectrum pellucidum. By using two transducers on both sides of the skull it is possible to compare the echo patterns from the two sides simultaneously. This permits small deviations from the midline to be demonstrated.

INDIA

Choline Theophyllinate for Edema.—H. N. Singh (*Journal of the Indian Medical Association*, vol. 33, July 16, 1959) stated that a therapeutically effective concentration of theophylline in the blood can be obtained by giving choline theophyllinate by mouth. With this drug injections are not necessary as with theophylline ethylenediamine. Gastrointestinal irritation is not common after oral administration and side-effects are few. The author gave the drug to 28 patients with edema of varying cause. These patients were given an ordinary vegetarian diet with low salt content. Fluids were allowed as desired and choline theophyllinate was given in doses of 200 mg. four times a day.

Its diuretic effect was observed in cardiac patients in the absence of any cardiac glycosides. This effect was marked during the first 24 hours. It then showed a slight diminution and later increased. An average increase of 762 cc. of urine was noticed in the daily urinary output, in the first four days of therapy. There was simultaneous reduction in body weight, with an average of 12 lb. (5.4 kg.) being lost in the first four days. The average fluid intake in these cases was 1,618 cc. and the average urinary output was 2,585 cc. in the first four days. Thus, 967 cc. of fluid was lost per day. The drug could be given for a long period with the maintenance of good diuresis. The results were best in patients with cardiac edema and moderately good in those with edema due to hypoproteinemia. Edema in nephritis and cirrhosis did not respond well to the drug.

Drip Infusion for Anemia.—M. N. Parikh and co-workers (*Journal of Obstetrics and Gynecology of India*, vol. 9, June, 1959) reported encouraging results with intravenous drip infusions containing 1 Gm. of elemental iron in the treatment of iron deficiency anemia during pregnancy. The therapy is of special value in patients who, for different reasons, cannot stay long in the hospital and cannot come repeatedly to the hospital for parenterally administered iron therapy. Patients with hemoglobin values between 4.3 and 7.2 Gm. and who were in the sixth to eighth month of pregnancy were selected for trial after the anemia was proved to be due to iron deficiency. An initial test dose of 2 cc. of a preparation containing 40 mg. of elemental iron was given to exclude sensitivity to iron. After two or three days, a test dose of 5 cc. of the preparation was given. On the next morning an intravenous drip infusion containing 1 Gm. of elemental iron in 1 liter of 5% dextrose solution was started and run in at the rate of 45 to 60 drops per minute, the whole infusion taking six to eight hours to administer. No antihistaminics were required.

The patients were discharged the next day, after another intravenous injection of 100 to 200 mg. of iron in those with severe anemia. The patients were advised to take vitamin B complex and a preparation of protein therapy by mouth. In a series of 15 patients so treated the average hemoglobin level increased from 43.9 to 70.1% in an average period of 27 days. The clinical improvement was equally striking. No serious reactions occurred. The intravenous drip infusion of iron in dextrose solution was continued in spite of epigastric discomfort and vomiting, if this was unaccompanied by any other symptoms or change in pulse and blood pressure. These changes usually appeared only after 700 mg. of elemental iron was administered.

Although it was intended to give 1 Gm. of iron to all the patients, four patients received less than this amount, as one patient developed vomiting, two refused to have the infusion for such a long time, and one developed hunger contractions and insisted on sitting up for lunch. Patients were encouraged to drink milk at regular intervals during the infusion to allay hunger. An intramuscular injection of 15 mg. of morphine helped to reduce the discomfort of lying down in one position without moving the arm for a prolonged period. Megaloblastic anemia is a contraindication for intravenous iron therapy. Two patients with such a condition who received this therapy registered a continuous fall in the hemoglobin level after the injection. The presence of a hypoplastic bone marrow is also probably a contraindication to this therapy.

Leprosy.—A survey conducted by the Mines' Board of Health, Asansol, showed an alarming increase in the incidence of leprosy in this area. The number of people found to be suffering from this disease was 5,285, of whom 1,068 were in a highly infective state. About 1% of school boys was found to be suffering from the disease. The incidence among miners was 0.4%. Since the survey was incomplete it was believed that the number of lepers in this subdivision must be more than 15,000. The disease is spreading due to inadequacy of facilities for segregation and treatment.

Formation of Urinary Calculi.—P. Das (*Journal of the Indian Medical Association*, vol. 33, July 1, 1959) placed a sterile round piece of zinc, 3 mm. in diameter, in the urinary bladders of 53 rats through a suprapubic cystostomy after which the bladder was closed. The animals were fed a diet of wheat, milk, and green vegetables; a diet which is not conducive to stone formation. Rats were killed at the rate of 1 a day for three weeks after the operation and then the remaining 32 were killed. The sequence of events in the formation of these stones as observed in the second group showed that first the foreign body got attached to the bladder wall and a raised white speck formed at the site of attachment. By the fourth day, the foreign body along with this speck got detached and was found free in the bladder. A thin layer of mucus was deposited on the foreign body. It then gradually became covered with stone material and grew larger. By the 10th day it was thus completely covered, while small masses of mucoid material were occasionally seen partially covering the stone.

Secondary stones were noted after the 10th day. The amount of stone formed around the foreign body in the group of 32 varied, the smallest stone weighing 18.8 and the largest 161 mg.; 19 also showed secondary stones which were usually smaller than the original stone and most of them appeared to be a mass of crystals. Their number varied from 1 to 18 in a single animal. Six rats showed a gelatinous mucoid material or coagulum adherent to the original stone. Microscopic examination of the raised white speck showed inflammatory cells and a cellular homogeneous exudate. Calcium granules were demonstrated in this intercellular substance in one animal. The white speck was shown to contain polysaccharides and imbibed calcium in its substance. The coagulum was a hyaline structureless acellular mass containing many clear spaces (probably coagulated mucin). No calcium could be demonstrated. Flattened epithelial cells covered its surface in spots. The coagulum could have formed from the mucosa of the bladder, from the colloids of urine, or both. It probably acted as a layer of organic matter on which the crystalloids were deposited.

In a third group of rats, the coagulum obtained from the rats in the first experiment was placed in the bladder and the animals were killed a week or two later. In some rats stone formation was noticed to have occurred in relation to the coagulum while in others, the coagulum had shrunk and crystals of stone material had deposited on its surface. The author concluded that the presence of a foreign body in the bladder initiates certain processes leading to the formation of stone. It not only acts as a nucleus for deposition of stone material but also starts the production of coagulum, precipitation of crystals, and formation of secondary stones.

SWEDEN

Prostaglandin.—Prostaglandin is defined as the lipid soluble smooth muscle-stimulating and blood pressure–lowering factor with acidic properties in seminal fluid and in extracts of some accessory genital glands. Rune Eliasson (*Acta physiol. scandinav.* [supp. 158] 46:1-73, 1959) stated that the prostaglandin present in seminal fluid from man was secreted exclusively from seminal vesicles. There appear to be three possible physiological functions of prostaglandin. It may (1) act as a chemical stimulator inducing the emptying of the accessory genital glands, (2) be of importance for the motility of the spermatozoa, and (3) facilitate the migration of spermatozoa in the female genital tract.

Phenmetrazine for Obesity.—R. W. Ettlinger (*Opusc. med.* 4:175-178, 1959) stated that many patients treated for obesity with phenmetrazine had become manic. It had also produced addiction. The author concluded that as the drug was so dangerous from the psychiatric point of view it was gratifying that it had officially been classed as a narcotic.

Anemia in Chronic Nephropathies.—The anemia in chronic glomerulonephritis and nephrosclerosis can partly be explained by a depressed erythropoiesis. The anemia and the depressed erythropoiesis are well correlated to the duration of the impairment of the kidney and less well to the degree of the azotemia. No hemolytic signs have been proved. In a nephrotic kidney the above-mentioned correlation does not exist. A hemolytic erythropoiesis is more common. N. G. Nordenson (*Opusc. med.* 4:212-220, 1959) investigated 104 patients with chronic glomerulonephritis and nephrosclerosis, of whom 78 had anemia and 87 had hypoplastic erythropoiesis. None had hemolytic erythropoiesis. Of 11 patients with nephrosis, 8 had anemia, 3 had hypoplastic erythropoiesis, 3 had normal or hyperplastic erythropoiesis, and 5 had a morphologic, hemolytic erythropoiesis. Of seven with chronic interstitial nephritis, six had anemia, one had hypoplastic erythropoiesis, two had normal or hyperplastic erythropoiesis, and four had hemolytic erythropoiesis. The cause of the depressed erythropoiesis is still in doubt. Probably there is lack of specific hemopoietins in chronic nephropathies. In acetophenetidin poisoning with kidney damage the etiological problems are simpler. The treatment of the hypochromic anemia with a combination of iron, copper, and cobalt is probably of value in these patients.

Silicon in Tissues.—Sigfrid Fregert (*Acta dermat. venereol.* [supp. 42] 39:1-92, 1959) determined the amount of silicon in human epidermis, dermis, nail, and hair. The tissues were obtained from cadavers aged one day to 87 years without any evidence of skin disease and from surgical specimens. Scales from patients with psoriasis, exfoliative dermatitis, and ichthyosis were also analyzed. The mean value of the silicon content of epidermis was found to be 106 mcg., of whole skin 23 mcg., of female dermis 18 mcg., of male dermis with strong growth of hair 25 mcg., of hair 90 mcg., and of nail 56 mcg., per gram of dry tissue. About 50% of the epidermal silicon was found in the cornified layer. About 70% of the total silicon content of the cornified layer but no more than 6% of that of the noncornified layer was alkali-insoluble.

Dry scales from patients with psoriasis contained, on the average, 45 mcg. of silicon dioxide per gram. On an average, 23% of the silicon was alkali-insoluble. Dry scales from patients with exfoliative dermatitis contained 23 to 55 mcg. per gram, and 18 to 36% of this silicon was alkali-insoluble. Dry ichthyotic scales contained 260 to 594 mcg. per gram, and 55 to 79% was alkali-insoluble. The author commented that as there was a large accumulation of silicon in the alkali-insoluble component, the silicon probably formed an essential part of this fraction. It was postulated that silicon might combine by cross-linking with keratins, forming an alkali-insoluble component of cornified structure. In this way it might contribute to the solidity and chemical resistance of these structures which form a barrier of absorption. The fact that the silicon content was lower than normal in pathological epidermis with incomplete keratinization but higher than normal in pathological epidermis with superkeratinization also indicated its role in the keratinization process.

Prevention of Chronic Acetophenetidin Poisoning.—According to Dr. Siegwan (*Svenska läkartidningen*, June 18, 1959) many patients with chronic pyelonephritis will, when closely questioned, admit that they have been taking acetophenetidin over a long period. In Sweden it is exceptional for this drug to be taken alone, but there are about 30 preparations containing it, most of them requiring a doctor's prescription. Those preparations in which the sale is unrestricted constitute a danger to the public health. After consultation with Dr. Siegwan one pharmaceutical firm withdrew the acetophenetidin from Sedyl and Sedisonal, replacing it with N-acetyl-p-amino-phenol. The tablets thus modified and known as Sedyl-napa and Sedisonal-napa, respectively, have now been tested on 42 patients suffering from such ailments as chronic polyarthritis, lumbago, and sciatica. In 36 of these patients the analgesic effect of the napa drugs was equal to that of the acetophenetidin compound. In two it was greater, and in four it was less. No toxic effects of any importance were observed, but two patients complained of slight abdominal discomfort.

Congenital Cardiac Disease.—Increasing facility in the treatment of congenital heart disease associated with elevated pressure in the pulmonary artery has intensified interest in concomitant changes in the pulmonary vessels. In order to judge whether closure of a ventricular septal defect or a patent ductus arteriosus in a given patient would lead to improvement, or might have a deleterious effect, F. Therkelsen and co-workers (*Acta chir. scandinav.* 117:174-180, 1959) reported a series of operations performed on 12 infants with patent ductus arteriosus and 18 with ventricular septal defects. In most of the latter group the method of Dammann-Muller was used, but in some patients open-heart surgery was performed. The only changes which seemed definitely specific for ventricular septal defect were intimal proliferations, which might also be regarded as irreversible.

In some patients with patent ductus arteriosus muscular hypertrophy was seen and nearly always there was hyperplasia of the elastic tissue. These investigations suggested that the correlation between vascular changes and pulmonary hypertension and shunt in congenital heart disease was not always certain. The authors could not exclude the possibility that elevated pulmonary artery pressure might in some patients be caused solely by the abnormally large flow. This problem is of special interest, if vascular changes are to be used as a guide to the advisability of operation in such patients.

"Community" Type Hospital for Mental Patients.—An 800-bed hospital for the care of mental patients built along entirely new lines was recently inaugurated by King Gustaf Adolf at Gullberna in southern Sweden. Five similar hospitals will be built within the next few years. On a peninsula on the Baltic Sea, in the district called "the Garden of Sweden," an area of about 125 acres has been transformed into a small ordinary community without bars and barriers. The hospital pavilions are located in the idyllic park and there is a community center with stores, cafeterias, barber shops, and a theater. It gives the impression of a small modern community or a tourist resort. As part of the therapy patients work in the hospital gardens and in different types of workshops. There are hobby rooms and a library. There is also opportunity for swimming and other outdoor activities. The impression of an ordinary community is emphasized by the fact that the patients do not wear hospital uniforms. Both men and women patients are accommodated in 12 pavilions, most of which are two-story houses. No ward has more than six beds. Each department has a dining room and a sitting room of its own where visitors can be received. There are no long, depressing corridors, and the furnishings as well as the walls are in light and gray hues. The staff consists of 7 doctors, 320 nurses and attendants, and 72 other employees, or one staff member for every two patients.

Why Strict Dieting for Diabetes?—Dr. S. Johnsson (*Nordisk medicin*, June 25, 1959) presented statistics indicating that the risk of renal and retinal complications in diabetics may be reduced by strict adherence to an appropriate diet. His series consisted of 54 patients who developed diabetes before the age of 40 between 1922 and 1935, and 105 similar patients from the period 1936 to 1945. During the first of these periods dieting was strictly enforced with a view to keeping glycosuria below a certain level. After 1936 these precautions were progressively relaxed, with the patients being on a comparatively normal diet as long as they were free of glycosuria. Involvement of the kidneys was seven times more frequent in the second than in the first period. Involvement of the retina was also more frequent in the second period. Insulin coma and other insulin mishaps were more frequent in the first period, but they seem to have had no part in the provocation of the late complications of diabetes. It is justifiable when necessary to raise the insulin dose from once to twice a day, and among the eight patients in the first period with a record of more than 20 insulin comas not one showed evidence of renal disease.

UNITED KINGDOM

Environmental Hazards of Pregnancy.—At the 15th British Congress of Obstetrics and Gynecology in Cardiff in July, Dr. Alice Stewart described the results of studies she had made on the effect of manual work during pregnancy. From a survey of 4,000 pregnancies of women in Northampton she found that attempts to combine housework with paid manual employment are likely to increase the risk of premature birth and consequently of stillbirths and neonatal deaths. Other factors being equal, fetal death is more likely to occur if a mother is obese and short than if she is tall and thin.

Neonatal Asphyxia.—At the same meeting, Dr. M. S. Fraser reported on a series of 100 children 6 to 11 years of age who had had asphyxia at birth and 100 matched controls who had had a normal birth. A definite association was observed between the occurrence of asphyxia at birth and the subsequent development of epilepsy and myoclonic seizures. Those with asphyxia at birth were slightly less dexterous and more clumsy in finely coordinated movements of the limbs than the controls. There were slight but definite personality defects in the groups with asphyxia.

Handicaps of Prematurity.—At the same meeting, Dr. C. M. Drillien stated that her investigations did not confirm the generally held view that premature infants eventually catch up. A series of 600 premature infants was followed up and their mental and physical status compared with that of children of the same age who were of normal weight at birth. By 6 years of age the prematurely born had not caught up to normal weight. All the milestones of infancy occurred later in the prematurely born. Their I. Q. and mental development were lower than those of children of normal birth weight. Only 7% of the prematurely born had a normal or above normal I. Q., 49% were dull and needed special schools, and 14% had an I. Q. below 70 and were incapable of being educated. Other factors, such as social status, were involved. The prematurely born more commonly came from the poorer families, where the environment was not conducive to good mental or physical development. Undoubtedly environment played a part in development. Dr. Drillien stated that the prematurely born with the lowest birth weight had the highest incidence of physical and mental handicaps later in life.

The incidence of illness, particularly involving the respiratory tract, was greater among the prematurely born, and a high proportion had visual defects, particularly myopia. Emotional disorders, which were found to be more common than in normal children, were present in 33% of them. These could, however, be due partly to an overprotective attitude of the parents. Emotional instability was likely to be a great handicap later in their lives.

Estrogen Assays.—At the same meeting, Prof. Robert Kellar described the work that his group had done on the correlation of urinary estrogen excretion with certain gynecologic and obstetric conditions. The estrogen fractions assayed were estriol, estrone, and estradiol-17. Postmenopausal women, women with amenorrhea who had an inactive endometrium, patients exhibiting anovulatory cycles, and some with cystic glandular hyperplasia showed a more or less constant level of total urinary estrogen excretion, fluctuating between 7 and 30 mcg. in 24 hours. This was in contrast to the normally menstruating woman, who showed a resting minimum of 12.5 mcg. rising to a follicular maximum of 57 mcg. at ovulation, and a luteal maximum of 22 mcg. between the 20th and the 24th day of the menstrual cycle. Patients with ovulatory cycles and a few who had cystic glandular hyperplasia showed marked periodic fluctuations in estrogen excretion. In all conditions a direct correlation was found between the histological state of the endometrium, the vaginal smear, and the level of urinary estrogens.

A gradual rise in urinary estrogen was observed in pregnancy increasing from an average of 5 mcg. in 24 hours to a maximum of 35 mcg. just before term. In twin pregnancy the value was more than doubled, but in patients with gestoses the values were much lower than normal. Prof. B. ten Berge, of Amsterdam, showed how the fall in urinary estrogen excretion could be of diagnostic help during pregnancy. When the estradiol excretion falls below 10 mcg. daily in a toxemic patient he induces labor. At values below this the fetus is likely to die.

CORRESPONDENCE

THE HOSPITAL SHIP "CONSOLATION"

To the Editor:—Having spent seven years in the Orient, most of that time on the staff of a struggling union medical college in China, I hasten to agree with Dr. Karl M. Bowman and Dr. Francis S. Smyth (*J. A. M. A.* 170:2130 [Aug. 22]) concerning the most efficient way to invest American dollars for medical work overseas. Namely, I share their concern over the wisdom of spending $3,500,000 to send the hospital ship "Consolation" to Southeast Asia. This tremendous sum of money judiciously invested through any of the well-recognized channels for overseas medical work would almost certainly do more lasting and long-term good than the hospital ship extravaganza.

In addition to the China Medical Board and the Rockefeller Foundation mentioned by Dr. Smyth, there are numerous other thoroughly competent and experienced groups and persons whose help would insure the wise investment of American dollars overseas. Most of us are eager to do all we can to help less fortunate people overseas. However, we are also eager to have our efforts be far reaching and efficient.

WHAT IS AN "INTERNIST"?

To the Editor:—The internist is the only specialist in the realm of medicine who must continually attempt to define and/or describe the function of his specialty. This is true, as evidenced in the editorial by Dr. Paul S. Rhoads in the *Archives of Internal Medicine*, October, 1958, page 515, as well as in the editorial by Dr. Arthur L. Bloomfield in The Journal, April 4, 1959, page 1628. Further evidence that we are unable to define our own specialty is brought out by the brochure of the Society of Internal Medicine. We as internists are at the crossroads of survival as a specialty and as a distinct entity. The public does not need an explanation as to the function of a surgeon, an obstetrician, or an ophthalmologist; it knows the function of the general practitioner who has over the years justifiably enhanced his stature in the medical profession and in the eyes of the layman. Our fees as internists are open to censure, and in many respects the so-called high cost of medical care falls on the shoulders of the internist because of the ignorance evidenced by our patients concerning our capabilities and our special training.

Assuming then that the term "internist" remains an enigma even after 23 years and that we are still making efforts to define it, would it not be wise to face the issue and change the name of our specialty? Without doubt the one word most frequently used to describe ourselves to our lay friends is "diagnostician." Everyone knows that term and remembers that the diagnostician was the specialist called on when knowledge was needed to help unravel a medical problem. Why then was this term glossed over when the American Board of Internal Medicine was incorporated? The public has been conditioned to know that a diagnostician furnishes expert care, and, by the same token, they are conditioned to respect an expert's fee; they are also more impressed by the final report given by such a specialist. Incidentally, there has never been any thought in the mind of anyone that the diagnostician, in turn, cannot indulge in therapeutics. Even after these many years there is a growing concept that an internist is a semiglorified family physician.

Unfortunately, however, he does not fulfill the old time connotation of a "family physician" with all of its nostalgia and reverence. Maybe this is because we refuse to do many of the procedures which rightly belong in other spheres of medicine. Hence, we are continually confronted with the plaintive cry, "Oh, for the good old days when we could have a doctor who took care of all our troubles." If the layman were sufficiently educated as to the function of the internist, would he have to make that statement? If, after all these years, Dr. Rhoads states that "after several frustrating hours of search in one of America's best equipped medical libraries, I was able to dig out no good statement of what is encompassed by the term," how can we be expected to have a layman understand the term "internist"? I sincerely hope that every internist will read the editorial written by Dr. Rhoads. It is most illuminating. If our specialty board would change its name from the American Board of Internal Medicine to the American Board of Diagnostic Medicine, I respectfully submit that a large part of our problem would be answered.

We as internists have no desire to give up our function as "family doctors." That is a major part of our work. Why not then refer to ourselves as "medical counselors," so, when that term is coupled with the term "diagnostician," the patient will know that he can come to us with his medical problems, that we will deal with them within the realm of our specialty, and that we will place them in proper channels. We would then be truly "family doctors," but on a plane thoroughly understood by the patient. It, therefore, seems paradoxical and somewhat ridiculous that after 23 years we, as internists, are still trying to define the term "internal medicine," that we are still trying to educate our patients as to what we represent, that we are the specialty whose fees are most often criticized, and that we are the one group which is in the middle and which seems to be taking the beating as it pertains to the high cost of medicine, because we are not considered as true specialists in the eyes of the populace in general.

I reiterate, I strongly urge that the American Board of Internal Medicine consider changing its name to the American Board of Diagnostic Medicine.

MEDICAL FILM REVIEWS

Prevention and Control of Staphylococcal Infections: 16 mm., black and white, sound, showing time 17 minutes. Produced in 1958 by and procurable on loan from the Communicable Disease Center, P. O. Box 185, Chamblee, Ga.

This is a training film which is intended to stimulate thought and discussion rather than provide the final solution to the problem of controlling staphylococcic infections in hospitals. The ways in which staphylococcic infections are spread are briefly recapitulated. The film recommends the appointment, for each hospital, of a committee on infections consisting of a pediatrician, an internist, a surgeon, the director of the laboratories, a hospital administrator, and a nurse. Methods of controlling infections in hospitals are shown. These consist of isolation of infected patients, thorough washing of hands by members of the hospital staff after examination of each patient, adequate surgical scrubbing, placement of infectious patients requiring an operation last on the day's operating schedule, decontamination of the operating room, intelligent assignment of bed space to infectious patients, and institution of good housekeeping procedures in the care of infectious patients. Such care consists of int[illegible]gent handling of bedding, linen, old dressings, and instruments that have been used for infectious patients; a meticulous aseptic technique in dressing wounds of such patients; and the thorough washing of all objects in the infectious patient's environment with a good antiseptic solution. After infectious patients return home from the hospital, they should be followed up by telephone calls or by personal visits. In addition to instruction of staff members in how to prevent the spread of staphylococcic infections, patients should likewise be instructed in how to cooperate to minimize the spread of the infectious agent. The film closes with several questions to initiate discussion. It will be of interest to physicians, surgeons, hospital administrators, medical students, nurses, and housekeeping personnel.

The Epidemiology of Staphylococcal Infections: 16 mm., color, sound, showing time 13 minutes. Produced in 1958 by and procurable on loan from Communicable Disease Center, P. O. Box 185, Chamblee, Ga.

The message in this film is constructed around the epidemiology of staphylococcic infections which involves primarily the agent (Staphylococcus aureus), the reservoir (man), the host (man), and the environment (hospital). Factors that are briefly shown or mentioned are the morphology of the organisms in a gram-stained smear, the appearance of the colonies on a blood-agar plate, the coagulase test, bacteriophage typing, the increased resistance of the organism to certain antibiotics, and the various types of infections which are being encountered in hospital practice. The upper respiratory tract, primarily the nasopharynx, and skin lesions are pointed out as the main current reservoirs of the agent. Only a minority of the strains of the Staph. aureus have become highly pathogenic and communicable. The possible routes of transmission of the agent to a new host may be by the hands, handkerchieves and clothing contaminated with nasal secretions, shoes, airborne lint, and fomites. Any hospital patient or personnel may acquire the highly virulent strains of the agent to become either a staphylococcic patient or carrier and thus serve as a new reservoir. Such infected persons may also carry the agent to others in their homes and communities, and subsequently the agent may be reintroduced into a hospital. Preventive measures are not discussed. This film will be of interest to physicians, surgeons, hospital administrators, medical students, public health workers, epidemiologists, and technicians.

Routine Pelvic Examination and Cytologic Method: 16 mm., color, sound, showing time 14 minutes. Prepared by S. B. Gusberg, M.D., New York. Produced in 1958 by Audio Productions, New York, for and procurable on loan from the American Cancer Society, 521 W. 57th St., New York 19.

This film presents both the general technique of pelvic examination and the technique of obtaining and preparing cervical and vaginal smears as a part of that examination. Three methods of obtaining smears are shown. The value and importance of the routine use of cytology as a part of the pelvic examination is emphasized by narration, charts, and graphs. This is an admirable film. It stays close to the subject and presents the material concerning routine pelvic examination excellently. It is highly recommended for showing to medical students and general practitioners.

MEDICAL LITERATURE ABSTRACTS

INTERNAL MEDICINE

Mitral Insufficiency and Pulmonary Hypertension Accompanying Patent Ductus Arteriosus: Report of Three Cases. L. M. Linde and F. H. Adams. Am. J. Cardiol. 3:740-745 (June) 1959 [New York].

The clinical diagnosis of uncomplicated patent ductus arteriosus is not difficult. When this defect exists in association with other cardiovascular anomalies, the classic signs are often absent. This paper presents 3 patients with the previously unreported triad of mitral insufficiency and pulmonary hypertension in association with patent ductus arteriosus. In each of the 3 girls, ranging in age from 15 months to 7 years, the initial diagnosis was ventricular septal defect because of the absence of the typical to-and-fro machinery murmur and the presence of a loud, blowing systolic murmur. All had electrocardiographic and roentgenologic evidence of enlargement of the left atrium, both ventricles, and the pulmonary artery, and catheterization provided evidence of a patent ductus with pulmonary hypertension. Closure of the ductus resulted in great clinical improvement, but the loud systolic murmur persisted and the presence of mitral insufficiency subsequently became obvious. Early diagnosis and closure of the ductus is important in these patients in order to prevent irreversible vascular changes in the lungs. The etiology of the residual mitral regurgitation is not known, but its persistence has not produced obvious functional impairment.

On the Treatment of Acute Myocardial Infarction by Retrosternal Novocain Anesthesia. F. E. Ostapiuk. Terap. Arkh. 31:53-59 (no. 6) 1959 (In Russian) [Moscow].

The author treated 65 patients with acute myocardial infarction by retrosternal Novocain anesthesia. For this purpose 60 cc. of 0.5 cc. of Novocain solution was injected by puncture of the jugular fossa. In patients with tendency to hypotension, or to hypotension with bradycardia, 1 cc. of atropine sulfate was added to the Novocain solution. The injections were repeated either daily or with intervals of one or more days, depending upon the effect of the last injection. These injections were well tolerated except for a sense of weakness and dizziness in some of the patients. The subjective symptoms of acute infarction disappeared as a rule after the first injection. However, the patients were not free from repeated attacks of anginal pain and from other phenomena of myocardial ischemia. Attacks of anginal pain, of auricular flutter, and of paroxysmal tachycardia disappeared after repeated injections.

The injection treatment was discontinued if the electrocardiograms failed to show improvement after 4 or 5 injections. The effect of retrosternal injection of Novocain is believed to be due to anesthesia of the nerve plexuses of the anterior mediastinum, of the sympathetic nerve fibers, and of the vagi. This anesthesia results in dilatation of the coronary arteries of the heart and consequent improvement in the collateral circulation.

Changes in Coagulability of the Blood During Various Phases of Ischaemic Heart-Disease. L. McDonald and M. Edgill. Lancet 1:1115-1118 (May 30) 1959 [London].

In an earlier investigation the authors had compared the coagulability of the blood in patients with ischemic heart disease and in healthy controls. The patients in that group had angina pectoris on exertion, and, although cardiac infarction had occurred previously in some, it was recent in none. The studies described in this paper tried to find answers to questions raised by the findings in the earlier investigation. Coagulability of the blood in relation to platelet count, platelet stickiness, fibrinogen levels, thromboplastin generation, and prothrombin time (Russell's viper venom, "Stypven") were compared in 22 healthy men, 30 men with angina pectoris on exertion, 7 patients with acute coronary insufficiency, and 10 patients with cardiac infarction. All these patients were male except 2 with acute coronary insufficiency and 2 with cardiac infarction.

Values for platelet stickiness, thromboplastin generation, and fibrinogen levels increased from healthy controls to patients with angina pectoris, and from these to patients with cardiac infarction. Findings in acute coronary insufficiency were not

The place of publication of the periodicals appears in brackets preceding each abstract.

Periodicals on file in the Library of the American Medical Association may be borrowed by members of the Association or its student organization and by individuals in continental United States or Canada who subscribe to its scientific periodicals. Requests for periodicals should be addressed "Library, American Medical Association." Periodical files cover 1950 to date only, and no photoduplication services are available. No charge is made to members, but the fee for others is 15 cents in stamps for each item. Only three periodicals may be borrowed at one time, and they must not be kept longer than five days. Periodicals published by the American Medical Association are not available for lending but can be supplied on purchase order. Reprints as a rule are the property of authors and can be obtained for permanent possession only from them.

significantly different from those in angina pectoris, except that the platelet count was higher in acute coronary insufficiency than in other groups. There were no other significant differences between groups, in respect of platelet counts. Coagulability of the blood was higher in patients with angina pectoris than in healthy controls and higher again in patients with cardiac infarction. Patients with acute coronary insufficiency appeared to have a level of coagulability comparable to that found in patients with angina pectoris on exertion only and less than that found in cardiac infarction.

In 15 healthy men and 29 men with angina pectoris on exertion, blood coagulation was similarly tested on repeated occasions. The hypercoagulability of the blood in patients with angina pectoris was confirmed. The variations within the groups of healthy controls and of patients did not differ significantly, except in the total platelet count. This varied more in patients than in normal subjects.

Observations on hypercoagulability of the blood in normal people and on various factors which might affect blood coagulation (including rest in bed, age, the menstrual cycle, intravascular thrombosis, anticoagulants, diet, and serum cholesterol) are also presented. The authors conclude that there is clear evidence of phasic hypercoagulability when the blood of patients with ischemic heart disease is studied in vitro. This is entirely in keeping with a variable hyperthrombotic state, and ischemic heart disease is marked clinically by episodes of thrombosis. The possibility of heparin deficiency or overutilization in ischemic heart disease is being further investigated.

SURGERY

Evaluation of Operability in Patients with Pulmonary Hypertension by Catheterization and Occlusion of Patent Ductus Arteriosus. A. Actis-Dato and A. Tarquini. Circulation 19:821-826 (June) 1959 [New York].

The authors describe a technique of temporary occlusion of the patent ductus arteriosus during right heart catheterization by a balloon filled with contrast medium connected to the tip of the catheter. They tabulate data on 6 patients in whom they employed this technique. During temporary closure of the ductus, pulmonary artery and right ventricular pressures may drop, may rise, or may remain unchanged. With a drop, surgical occlusion of the ductus is definitely indicated, and with a rise it is definitely contraindicated. When there is no change, the authors believe the operation is indicated, but pressures should be measured during effort, such as working at an ergometer while the ductus is kept closed with the balloon. If the pulmonary pressure rises under effort, operation is not advisable.

The Value and Limitations of Thromboendarterectomy in Complete Obstruction of the Aorta and the Iliac Arteries: A Report on 18 Observations. P. Wertheimer, J. Sautot, J. Descotes and A. Sisteron. Semaine hôp. Paris 35:1841-1844 (May 28) 1959 (In French) [Paris].

The authors describe a modified technique of endarterectomy performed on 7 patients with complete obliteration of the aorta and of the iliac arteries corresponding to the Leriche syndrome, and on 11 patients presenting obliterations localized on the iliac axis but not extending to the aorta proper. One patient in whom a preoperative cardiogram indicated previous myocardial impairment died because of myocardial infarction. Two patients were operative failures. In the remaining 15 patients the operation was successful, both objectively and subjectively. Endarterectomy gives good results in patients in whom the obstruction is localized in the large vessels (aorta and common iliac arteries) and whose general condition and vascular status indicate an operation of such magnitude.

The Risk of Hepatitis from Whole Blood and Stored Plasma. P. I. Hoxworth, W. E. Haesler Jr. and H. Smith Jr. Surg. Gynec. & Obst. 109:38-42 (July) 1959 [Chicago].

Serum hepatitis is a calculated risk whenever whole blood or fresh plasma is transfused. The incidence in whole blood transfusion ranges from 0.2 to 0.5% for a single transfusion and in pools of plasma the infectivity may be as high as 22%. In earlier publications, the authors reported the results of a 4-year investigation made to determine the effect of storage of liquid plasma at temperatures of 72 to 95 F for 6 months upon the activity of the virus of serum hepatitis as demonstrated by human transmission of the disease. In that study no hepatitis was encountered in 282 followed-up patients exposed to the plasma of 4,892 donors but to no whole blood. In contrast, 6 cases of hepatitis occurred in a group of 563 patients, each of whom received both plasma and whole blood. Analysis of the data indicated that the whole blood was most likely the cause of the jaundice and the safety of stored plasma seemed apparent.

The studies reported in this paper aimed to provide conclusive evidence about the safety and effectiveness of room temperature storage of plasma and to avoid an experience such as occurred with the premature acceptance of ultraviolet irradiation of plasma as an antiviral agent. Among 3,349 followed-up recipients of 7,315 units of whole blood there were 19 cases of serum hepatitis. Thus in the Cincinnati area, minimal incidence of infectivity of whole blood from screened donors is 0.259% (19÷7315), or 1 in 380. In 674 followed-up patients exposed to plasma of 5,352 donors and

2,163 units of whole blood there were 6 cases of hepatitis. Based on the survey of recipients of whole blood this number of cases could be expected from the whole blood exposure alone, since 0.277% (6÷2163) would be the incidence of infectivity if whole blood was responsible.

Pooled plasma obtained from 4,961 donors and stored for 6 months at room temperatures averaging 80.6 F (27 C) produced no hepatitis in 317 followed-up recipients. If the experience had been the same as that with whole blood there would have been 39 cases of hepatitis among the 317 followed-up recipients of plasma only. Statistical tests show that the probability of the deviation of 39 from 0 is less than 1 in 1,000. Thus the storage of liquid plasma at temperatures of 72 to 95 F (22 to 35 C), averaging 80.6 F (27 C), eliminated the transmission of clinically detectable serum hepatitis in 317 recipients. Quite apart from the question of viral effects, processing plasma and storing it as a liquid for 6 months raises questions as to the suitability of the product. One of these is how much of its effectiveness as a blood substitute is retained. In this regard the trial product has given satisfactory clinical results in rectifying plasma volume deficits and in parenteral protein feeding.

A Review of the Complications of Resection in the Treatment of Pulmonary Tuberculosis. I. K. Dagher, F. A. Simeone, W. E. Neville and others. Surg. Gynec. & Obst. 109:61-66 (July) 1959 [Chicago].

This study was undertaken to review the serious complications of resection in the treatment of pulmonary tuberculosis in 207 consecutive patients operated on at the City Hospital of Cleveland. A complication was considered serious if it delayed convalescence, was life-endangering, or was fatal. There were 56 (27%) serious complications, including 10 deaths (4.8%). Leakage of air and the development of bronchopleural fistula and empyema were the most common complications, occurring in 7% of all patients operated on and forming 29% of the complications. Study of the patients who postoperatively had persistent leakage of air revealed one common denominator, the presence of disease in the neighboring lung tissue which was cut across during resection. Thoracoplasty was employed to obliterate the pleural space, to control air leak, and to prevent the development of empyema. This was successful in all of the patients to whom it was applied.

Bronchopleural fistula and empyema occurred in 9 of the patients. The 6 pneumonectomy patients in whom this complication developed were subjected to early thoracoplasty; 3 recovered and 3 died. Three other patients with bronchopleural fistula and empyema, in whom further major surgical procedures were considered too dangerous, were subjected to open tube drainage of the empyema, thereby establishing a bronchocutaneous fistula. Healing resulted in 2 of these 3 patients and the third one remains in the hospital with a permanent fistula. In retrospect the authors feel that this more conservative approach of drainage and establishment of an open bronchocutaneous fistula might have given better results in the aforementioned 6 pneumonectomy patients. The patient with a minimal respiratory reserve must be treated without the development of pleural complications if a successful outcome of the operation is to be obtained. On the other hand, air leak and threatening empyema may well be handled with a considerable saving of time by early thoracoplasty in the patients with a satisfactory respiratory reserve as measured by pulmonary function studies.

GYNECOLOGY & OBSTETRICS

Hypofunction of Anterior Lobe of the Hypophysis: Report of Case and Discussion of Possible Etiological Factors. K. Berg. Nord. med. 61:761-763 (May 14) 1959 (In Norwegian) [Stockholm].

A woman, aged 61 years, had had myxedema and anemia for 16 years before anterior pituitary insufficiency was diagnosed and the myxedema was found to be secondary to the hypophysial insufficiency. The possibility is considered that the massive prolonged intra-abdominal hemorrhage, caused by tubal rupture in the 15th week of ectopic pregnancy when the patient was 24, resulted in a more or less extensive necrosis of the anterior lobe of the pituitary and that a normal pregnancy 4 years later led to hypertrophy of the remaining hypophysial tissue. The patient felt well till she was 45, when she began to develop a myxedematous appearance, with anemia. There may be a slow-growing, giant-cell granuloma in the anterior pituitary lobe or necrosis, or perhaps both. At present, while under treatment with thyroxin and cortisone, the patient is completely free from symptoms.

PEDIATRICS

Patterns of Infection with Enteroviruses. D. M. McLean. J. Pediat. 54:823-827 (June) 1959 [St. Louis].

A wide diversity of clinical syndromes, including pericarditis, was encountered following infection with Coxsackie B5 virus in southern Ontario in 1958, which is in sharp contrast to the uniform clinical picture of aseptic meningitis resulting from infection with this virus in Minnesota and Iowa during 1956. Clinical manifestations of infection by enteric cytopathogenic human orphan (ECHO) 9 and ECHO 16 viruses may appear, either as an

exanthem or as an aseptic meningitis, or, in the case of ECHO 9 virus, both conditions may occur in the same patient. The abrupt changes in antigenic types of predominant enteroviruses during successive seasons, as observed in southern Ontario and in some areas of the northern United States, have been discussed.

Mechanism of the Acute Allergic Reaction. G. B. Logan. Journal-Lancet 79:274-276 (June) 1959 [Minneapolis].

A better understanding of acute allergic reactions can be gained by further study of the mechanisms involved. Presenting his own concept of the involved processes, the author suggests that the antigen enters the body by way of the respiratory tract, the skin, or the gastrointestinal tract. In some infants, the antigens enter the body via the placental circulation. The antigen then goes to an antibody-producing cell. Present evidence indicates that this is a cell of the lymphoid series, probably the plasma cell. Whether all antibody-producing cells are plasma cells is still unknown. A special form of antibody, that is, the reagin or skin-sensitizing antibody, plays a part in allergy. Not only does reagin behave differently from other antibodies in its inability to be precipitated, but it also differs in that it migrates in the electrophoretic field with the beta globulin rather than the gamma globulin. There is some evidence that the reagin may be in the alpha-2 or the gamma-1 fraction, though most evidence now indicates its presence in the beta fraction. The conventional antibodies migrate with the gamma fraction. Blocking antibodies, which are produced by hyposensitization treatment, also migrate with the gamma fraction.

Apparently, an interval of about 10 days must intervene between the time the antigen is introduced into the body and the time the reagin appears in the blood. Reagin is released into the blood stream where it may be demonstrated by means of the passive transfer test, the so-called Prausnitz-Küstner reaction. Some reagin becomes intimately bound with some type of cell or cells. Whenever the antigen is subsequently introduced into the body, it unites with the reagin either in the blood stream or in or on the sensitized cell. The author further comments on such concepts as anaphylotoxin; the cells that are sensitized; their content of histamine, heparin, and, in some species, 5-hydroxytryptamine (serotonin); the "chemical mediators" released by the antigen-antibody reaction; and the role of the adrenal cortical hormones in influencing the acute allergic reaction.

An hereditary factor seems to play a part in allergic disease, but it appears that no one gene can carry such a complicated defect. Undoubtedly some people have the defect in the antibody-producing cell, in the mast or sensitized cell, in the enzyme-destroying mechanism, or possibly in other places. Still others may have a combination of various factors. As regards treatment, the author says that epinephrine, ephedrine, the theophylline compounds, iodides, and the antihistamine drugs give purely symptomatic relief, since all of them exert an effect on the end-organ only. Once the sensitized cell is attacked, no form of treatment will help that particular cell. Hyposensitization, by introducing blocking antibodies, can prevent the union of antigen and reagin. Finally, by meticulous environmental control, the antigen will not be permitted to enter the body, and this entire chain of events will be prevented from taking place.

Sclerema Neonatorum. D. D. Etzwiler. Journal-Lancet 79:256-257 (June) 1959 [Minneapolis].

Sclerema neonatorum is a hardening of the body tissues during the neonatal period. Although not a common disease, it is much more prevalent than the literature seems to indicate. The condition appears most frequently in premature or debilitated infants. Many of these patients have difficulty initiating respirations, or they have congenital cardiac abnormalities or overwhelming sepsis or become severely dehydrated. The skin and subcutaneous tissues of these newborn infants become firm and cold. This process usually begins over the buttocks, thighs, or trunk and then rapidly spreads to other areas of the body, with the exception of the palms, soles, and genitalia. The tissues assume a mottled appearance and cannot be lifted or moved over the underlying muscle and bone. The indurated areas take on a smooth wax-like appearance and do not pit on pressure. A hyperkinetic phase may precede actual skin changes and is characterized by pronounced irritability and prolonged crying. From this state, the infant may pass into a period of diminishing activity, may refuse to suck, and is unable to maintain a normal body temperature. Opisthotonos with stiffening of the extremities and labored respirations may occur, and, finally, death may ensue.

The author presents the histories of 3 infants with sclerema neonatorum, who were observed within a 10-month period at the St. Louis Park Medical Center, Minneapolis. Two of the infants were born prematurely. One of these 2 infants was treated with cortisone (10 mg. intramuscularly, at 12-hour intervals). When at the end of 4 days all evidence of sclerema neonatorum had disappeared, the cortisone dosage was tapered off and was stopped after 6 days. When discharged from the hospital at the end of 31 days, the infant was normal. The second of the prematurely born infants with sclerema died despite treatment with corticotropin (ACTH). The third infant, the product of a normal full-term pregnancy, recovered from sclerema neonatorum after treatment with corti-

sone. The etiology of the disorder is unknown, and, until recently, the condition was almost uniformly fatal. The use of cortisone and corticotropin has greatly altered this prognosis. Early recognition and prompt initiation of therapy are essential.

UROLOGY

The Rectal Bladder for Urinary Diversion. S. A. Wilkins Jr. and S. A. Wills. Surg. Gynec. & Obst. 109:1-12 (July) 1959 [Chicago].

The authors feel that the technique of constructing a rectal bladder is perhaps the simplest of any of the substitute bladders. After the surgical specimen including the bladder has been removed, the ureters fall easily along the lateral wall of the rectum or rectosigmoid for implantation. There is minimal danger of kinking and stricture subsequently. Essentially a mucosa-to-mucosa technique is used. The rectosigmoid is divided immediately above the site of implantation and closed. The proximal end of the intestine is probably better brought out through a stab wound in the left lower quadrant as a dry colostomy. Catheter drainage of the rectal bladder without suction is provided for the rectal pouch for 10 to 14 days to prevent distention or back pressure. The catheter must be changed frequently or irrigated with small amounts of sterile solution to remove the blood clots and the thick mucus, which is often produced in copious amounts. During the immediate postoperative period and for an indefinite time either sulfonamides or urinary antibiotics are used. The authors are guided by the status of the kidneys and the apparent speed of healing. If there has been damage to a kidney, they are inclined to use one of these agents for a much longer period.

The authors employed the rectal bladder method for urinary diversion in 6 patients, whose histories are presented. They do not characterize the sphincter control in any of these patients as excellent, since some have leakage occasionally and most of them must wear a pad at night. Control, however, is satisfactory; it is excellent during the day when the patients are up and about, but it is only fair to good at night. No significant electrolyte imbalance has resulted from rectal bladders in these patients. If some derangements occur, it is believed that they will be of a minor nature. It is encouraging that no clinical pyelonephritis has developed after the construction of a rectal bladder. In one patient pyelonephritis was already present in the left kidney and did increase to necessitate nephrectomy; however, in the right kidney, which was hydronephrotic, pyelonephritis did not develop. In another patient pyelonephritis did develop, but she had widespread recurrent disease with multiple fistulas to contribute to the production of this complication.

The rectal bladder represents another method of urinary diversion which, with the exception of the need for a dry colostomy, has no more disadvantages than the short segment substitutes draining to the skin and has certain advantages over them. With its simple construction it has technical advantages in application; it serves as a satisfactory reservoir with low intraluminal pressure and under voluntary control; it can be kept sterile; it does not require the wearing of a bag; and it is the simplest means of treating hyperchloremic acidosis and uremia in a patient who has already had ureterointestinal anastomosis. The authors believe that their plan to continue use of the rectal bladder in suitable instances and evaluating its merit is well justified.

Urinary Tract Infections from the Surgical Viewpoint. W. Mathisen. Tidsskr. norske lægefor. 79:535-539 (May 1) 1959 (In Norwegian) [Oslo].

Infections of the urinary tract present the same problems, whether looked upon from the medical or the surgical standpoint. Chronic or recurring infections of the urinary tract in adults can often date back to childhood. In such cases congenital malformations are often found. Not infrequently acute pyelonephritis occurs during a pregnancy. Most cases of urinary tract infections in childhood occur during the first 3 years of life. In about 25% of the cases the infection is hematogenous, originating from a focus elsewhere in the body, as a furuncle, tonsillitis, infection in the respiratory or gastrointestinal tract. In about 75% of all these infections in children, gram-negative strains are found in the urine. Children who have had 2 or more attacks of pyelonephritis and have not reacted to adequate treatment should be given a complete urologic examination in a hospital. Treatment of acute infections of the urinary tract in children does not differ from treatment of similar conditions in adults. Many patients have recurring infections in spite of adequate treatment, most often because of organic factors; the most frequent of these is stasis due to mechanical obstruction or neurogenic atony. The important ways of spread of infection to the urinary tract are hematogenic descending infection and ascending infection. All factors which hinder complete emptying of the urinary bladder predispose to ascending infection. The kidney function can be destroyed by obstruction or infection; the results which follow on a combination of both factors can be readily understood.

The medicaments best suited for long-term treatment of urinary tract infections are sulfonamides and Furadantin. Regular administration of vitamin B during long-continued treatment is recommended. Combination treatment with sulfonamides or Furadantin and an antibiotic is indicated when

exanthem or as an aseptic meningitis, or, in the case of ECHO 9 virus, both conditions may occur in the same patient. The abrupt changes in antigenic types of predominant enteroviruses during successive seasons, as observed in southern Ontario and in some areas of the northern United States, have been discussed.

Mechanism of the Acute Allergic Reaction. G. B. Logan. Journal-Lancet 79:274-276 (June) 1959 [Minneapolis].

A better understanding of acute allergic reactions can be gained by further study of the mechanisms involved. Presenting his own concept of the involved processes, the author suggests that the antigen enters the body by way of the respiratory tract, the skin, or the gastrointestinal tract. In some infants, the antigens enter the body via the placental circulation. The antigen then goes to an antibody-producing cell. Present evidence indicates that this is a cell of the lymphoid series, probably the plasma cell. Whether all antibody-producing cells are plasma cells is still unknown. Once the sensitized cell is attacked, no form of treatment will help that particular cell. Hyposensitization, by introducing blocking antibodies, can prevent the union of antigen and reagin. Finally, by meticulous environmental control, the antigen will not be permitted to enter the body, and this entire chain of events will be prevented from taking place.

Sclerema Neonatorum. D. D. Etzwiler. Journal-Lancet 79:256-257 (June) 1959 [Minneapolis].

Sclerema neonatorum is a hardening of the body tissues during the neonatal period. Although not a common disease, it is much more prevalent than the literature seems to indicate. The condition appears most frequently in premature or debilitated infants. Many of these patients have difficulty initiating respirations, or they have congenital cardiac abnormalities or overwhelming sepsis or become severely dehydrated. The skin and subcutaneous tissues of these newborn infants become firm and cold. This process usually begins over the buttocks, thighs, or trunk and then rapidly spreads to other areas of the body, with the exception of the palms, soles, and genitalia. The tissues assume a mottled appearance and cannot be lifted or moved over the underlying muscle and bone. The indurated areas take on a smooth wax-like appearance and do not pit on pressure. A hyperkinetic phase may precede actual skin changes and is characterized by pronounced irritability and prolonged crying. From this state, the infant may pass into a period of diminishing activity, may refuse to suck, and is unable to maintain a normal body temperature. Opisthotonos with stiffening of the extremities and labored respirations may occur, and, finally, death may ensue.

The author presents the histories of 3 infants with sclerema neonatorum, who were observed within a 10-month period at the St. Louis Park Medical Center, Minneapolis. Two of the infants were born prematurely. One of these 2 infants was treated with cortisone (10 mg. intramuscularly, at 12-hour intervals). When at the end of 4 days all evidence of sclerema neonatorum had disappeared, the cortisone dosage was tapered off and was stopped after 6 days. When discharged from the hospital at the end of 31 days, the infant was normal. The second of the prematurely born infants with sclerema died despite treatment with corticotropin (ACTH). The third infant, the product of a normal full-term pregnancy, recovered from sclerema neonatorum after treatment with corti-

sone. The etiology of the disorder is unknown, and, until recently, the condition was almost uniformly fatal. The use of cortisone and corticotropin has greatly altered this prognosis. Early recognition and prompt initiation of therapy are essential.

UROLOGY

The Rectal Bladder for Urinary Diversion. S. A. Wilkins Jr. and S. A. Wills. Surg. Gynec. & Obst. 109:1-12 (July) 1959 [Chicago].

The authors feel that the technique of constructing a rectal bladder is perhaps the simplest of any of the substitute bladders. After the surgical specimen including the bladder has been removed, the ureters fall easily along the lateral wall of the rectum or rectosigmoid for implantation. There is minimal danger of kinking and stricture subsequently. Essentially a mucosa-to-mucosa technique is used. The rectosigmoid is divided immediately above the site of implantation and closed. The proximal end of the intestine is probably better brought out through a stab wound in the left lower quadrant as a dry colostomy. Catheter drainage of the rectal bladder without suction is provided for the rectal pouch for 10 to 14 days to prevent distention or back pressure. The catheter must be changed frequently or irrigated with small amounts of sterile solution to remove the blood clots and the thick mucus, which is often produced in copious amounts. During the immediate postoperative period and for an indefinite time either sulfonamides or urinary antibiotics are used. The authors are guided by the status of the kidneys and the apparent speed of healing. If there has been damage to a kidney, they are inclined to use one of these agents for a much longer period.

The authors employed the rectal bladder method for urinary diversion in 6 patients, whose histories are presented. They do not characterize the sphincter control in any of these patients as excellent, since some have leakage occasionally and most of them must wear a pad at night. Control, however, is satisfactory; it is excellent during the day when the patients are up and about, but it is only fair to good at night. No significant electrolyte imbalance has resulted from rectal bladders in these patients. If some derangements occur, it is believed that they will be of a minor nature. It is encouraging that no clinical pyelonephritis has developed after the construction of a rectal bladder. In one patient pyelonephritis was already present in the left kidney and did increase to necessitate nephrectomy; however, in the right kidney, which was hydronephrotic, pyelonephritis did not develop. In another patient pyelonephritis did develop, but she had widespread recurrent disease with multiple fistulas to contribute to the production of this complication.

The rectal bladder represents another method of urinary diversion which, with the exception of the need for a dry colostomy, has no more disadvantages than the short segment substitutes draining to the skin and has certain advantages over them. With its simple construction it has technical advantages in application; it serves as a satisfactory reservoir with low intraluminal pressure and under voluntary control; it can be kept sterile; it does not require the wearing of a bag; and it is the simplest means of treating hyperchloremic acidosis and uremia in a patient who has already had ureterointestinal anastomosis. The authors believe that their plan to continue use of the rectal bladder in suitable instances and evaluating its merit is well justified.

Urinary Tract Infections from the Surgical Viewpoint. W. Mathisen. Tidsskr. norske lægefor. 79:535-539 (May 1) 1959 (In Norwegian) [Oslo].

Infections of the urinary tract present the same problems, whether looked upon from the medical or the surgical standpoint. Chronic or recurring infections of the urinary tract in adults can often date back to childhood. In such cases congenital malformations are often found. Not infrequently acute pyelonephritis occurs during a pregnancy. Most cases of urinary tract infections in childhood occur during the first 3 years of life. In about 25% of the cases the infection is hematogenous, originating from a focus elsewhere in the body, as a furuncle, tonsillitis, infection in the respiratory or gastrointestinal tract. In about 75% of all these infections in children, gram-negative strains are found in the urine. Children who have had 2 or more attacks of pyelonephritis and have not reacted to adequate treatment should be given a complete urologic examination in a hospital. Treatment of acute infections of the urinary tract in children does not differ from treatment of similar conditions in adults. Many patients have recurring infections in spite of adequate treatment, most often because of organic factors; the most frequent of these is stasis due to mechanical obstruction or neurogenic atony. The important ways of spread of infection to the urinary tract are hematogenic descending infection and ascending infection. All factors which hinder complete emptying of the urinary bladder predispose to ascending infection. The kidney function can be destroyed by obstruction or infection; the results which follow on a combination of both factors can be readily understood.

The medicaments best suited for long-term treatment of urinary tract infections are sulfonamides and Furadantin. Regular administration of vitamin B during long-continued treatment is recommended. Combination treatment with sulfonamides or Furadantin and an antibiotic is indicated when

several microbes are present. Chloromycetin can be effective when other antibiotics have proved ineffective; it is not suitable for long-term treatment. From time to time bacteriological examination of the urine and determination of the resistance of the microbes must be performed. How long treatment is to be continued depends on the individual case. In chronic pyelonephritis treatment must be given for at least a year. In all recurrences a complete urologic examination is called for before application of a new course of treatment.

OPHTHALMOLOGY

The Occurrence of Glaucoma Following Occlusion of the Central Retinal Artery: A Clinicopathologic Report of Six New Cases with a Review of the Literature. L. E. Perraut and L. E. Zimmerman. A. M. A. Arch. Ophth. 61:845-865 (June) 1959 [Chicago].

That glaucoma often follows occlusion of the central retinal vein is well known, but during the course of routine histopathological study of glaucomatous eyes at the Armed Forces Institute of Pathology, a number of eyes were found in which the disease apparently followed an occlusion of the central retinal artery. Reviewing cases from the Registry of Ophthalmic Pathology of the Armed Forces Institute of Pathology, the authors found a number of possible examples of glaucoma secondary to occlusion of the central retinal artery, but in this report they confine themselves to 6 of the more recent cases in which there was clinical evidence that the ocular tension did not become elevated until after arterial occlusion. A clinicopathological study of these 6 cases and a review of 25 others collected from the literature convinced the authors that glaucoma after occlusion of the central retinal artery is a distinct clinicopathological entity, although a much less common one than glaucoma after occlusion of the central retinal vein. Typically, there is an abrupt onset of ocular pain due to secondary glaucoma within 9 weeks of the time of arterial occlusion. Treatment of this secondary glaucoma is generally unsuccessful, and the eye is frequently enucleated soon after the onset of ocular pain.

The pathogenesis of the glaucoma in these cases, like that which follows occlusion of the central retinal vein, is not understood. Histopathological studies in early cases before the formation of well-developed anterior synechiae have provided evidence that something provokes an outgrowth of mesenchymal cells from the uveal tissues of the iris root. These cells invade the chamber angle to form a delicate membrane along the inner surface of the trabecula. It is this newly formed tissue which is believed to cause the initial obstruction to the outflow of aqueous. Subsequently, the formation of broad peripheral anterior synechiae aggravates the obstruction.

Ocular Manifestations of Insufficiency or Thrombosis of the Internal Carotid Artery. R. W. Hollenhorst. Am. J. Ophth. 47:753-767 (June) 1959 [Chicago].

The author reports on 124 patients, between the ages of 41 and 78 years, with ocular abnormalities, 38 of whom had thrombosis of one or both internal carotid arteries, and 86 had symptoms or signs of intermittent insufficiency of one or both internal carotid arteries. The diagnosis was made either clinically or by angiography. The major symptom among the group of 86 patients was that of amaurosis fugax, which was present in 48, and which was cured in most cases by anticoagulant therapy. Other ocular manifestations included retinopathy on the side of the affected carotid artery in 15 of the 124 patients, asymmetric hypertensive retinal vascular changes in 10 patients, and lowering of the pressure in the retinal artery on the side of the affected carotid artery in 83 patients. Occlusions of the retinal artery or one of its branch arteries were observed in 14 patients, and 6 additional patients had an associated homonymous hemianopsia to the opposite side. Three patients had hallucinations in the homonymous half-fields; 3 others had transient homonymous hemianopsia; and 8 had permanent homonymous hemianopsia.

The importance of establishing the diagnosis of carotid occlusive disease during the period of intermittent insufficiency is stressed. Ocular symptoms which point to impending carotid occlusion include attacks of transient or permanent diminution of vision in one or both eyes. Such signs as a lowered pressure in the retinal artery of one eye, cotton-wool patches in one eye, or asymmetrical hypertensive changes should alert the examiner to the possibility of carotid artery disease.

INDUSTRIAL MEDICINE

Serologic Evidence of Occupational Psittacosis in Poultry-Plant Workers. M. E. Rindge, E. L. Jungherr and J. H. Scruggs. New England J. Med. 260:1214-1218 (June 11) 1959 [Boston].

After a brief review of the literature on psittacosis as an occupational hazard in poultry-processing establishments, the authors discuss the case of a 43-year-old woman who, in December, 1956, complained of cough, fatigue, backache, chilly sensations, and fever. She was treated at home for 3 weeks when, not having responded to therapy, she was hospitalized. On admission, an x-ray film of the chest showed moderate infiltration at the base of the left lung; the white cell count was normal. Subsequent x-ray examination showed a clearing of the left lung, and the case was diagnosed as viral pneumonia. After 10 days in the hospital a blood specimen was submitted to serologic examination for psittacosis. The specimen showed complete complement fixation, with lygranum antigen at a dilution of 1:64 (the highest dilution tested). The diagnosis was changed from viral pneumonia to psittacosis. Three weeks after discharge from the hospital, a second blood specimen still showed complete complement fixation at a dilution of 1:64. No source of psittacosis could be found in the patient's home environment, but a history of employment showed that during the previous 18 months she had been employed in a poultry-processing plant, where her principal job was removing the trachea from birds.

In a serologic survey of the employees of the plant in which this woman worked ("Plant A"), specimens were obtained from 34 of 40 persons. Six of the 34 had titers suggestive of past contact with the psittacosis virus. A review of the records showed that the 6 serologic specimens, classified as reactive, were from employees, including the initial patient, who had worked in the evisceration operation. The detection of serologic reactors only among the employees working on evisceration, combined with clinical histories suggestive of viral pneumonia, prompted the expansion of the serologic survey to other poultry-processing plants in Connecticut (plants designated as B, C, and E in the same geographical area as plant A; and plants D and F in another part of the state). The poultry flocks in the areas of the plants were screened for latent infections.

In the plants surveyed, reactors were found only among the employees having the most direct contact (eviscerators) with probably infected birds. A majority of the workers with high titers (acute reactors) gave a history of episodes of upper respiratory illnesses since their employment in poultry processing. The high percentage of reactors in the poultry-plant workers 35 years of age and over, as compared to the control group, appears to be related to duration of employment in this industry rather than to age. The indirect complement-fixation test is highly specific for the serologic diagnosis of ornithosis (psittacosis) in chickens. The identification of 4 reactor poultry flocks that probably contributed to the supply of Plants A and E revealed a possible source of the recognized and unrecognized cases of psittacosis among the employees.

THERAPEUTICS

The Use of Steroids in Tuberculous Patients with Untoward Reactions to Anti-Microbial Therapy. R. Grossman. Dis. Chest 35:615-624 (June) 1959 [Chicago].

The author reports on the efficacy of a regimen of combined steroid therapy and chemotherapy in patients exhibiting moderate to severe reactions to antituberculous drugs. Cases were selected that had both active pulmonary tuberculosis and severe untoward drug reactions to one or more antimicrobial drugs. Chemotherapy was discontinued, and steroid hormones (ACTH and, if necessary, prednisolone) were administered in suppressive doses for 3 days. Antihistaminic medication plus steroid ointment was given as supplements if necessary. After the initial 3 days of suppressive hormonal therapy, the antituberculous agents were introduced singly and in progressively increasing doses. After one antimicrobial agent was successfully introduced, administration of the second was started. When the patient could tolerate 2 or 3 chemotherapeutic drugs, the dosage of steroid hormone was reduced gradually over a 3-to-5-week span. The patient was followed with periodic sputum examinations and chest x-rays to evaluate the effect of therapy on the underlying disease.

The histories of 5 patients who were subjected to this therapeutic regimen are presented. The drug reactions, such as pruritic rash, angioedema, fever, and hepatitis, as well as the disease toxicity, namely, cough, expectoration, anorexia, fever, and malaise, were suppressed simultaneously. There was regression of tuberculous exudative and recent infiltrative lesions. There was no injurious effect on the underlying tuberculous process, as noted on serial x-ray films of the chest and sputum cultures over a period of 21 to 26 months after steroid treatment. The steroids are a potent addition to the armamentarium of the clinician in treating tuberculous patients who manifest untoward drug reactions to the chemotherapeutic agents. However, one must be alert to the side-effects and physiological effects of the steroids which may be injurious to the patient.

Breast Cancer: A New Approach to Therapy. G. W. Watson and R. L. Turner. Brit. M. J. 1:1315-1320 (May 23) 1959 [London].

The authors do not believe that any spectacular improvement will come from existing methods of breast cancer therapy, which assume that the disease in the early stages is localized to the breast and adjacent lymph nodes. Endocrine ablation offers further prospects in late breast cancer, but even with such radical measures as pituitary ablation or bilateral adrenalectomy with oophorectomy, positive palliative results are obtained only in approximately 50% of cases, and a good remission lasting for a year or longer in rather less than 25%. In a few women remissions have been obtained with androgen therapy, presumably as a result of a selective breeding out of the estrogen-dependent cells under androgen therapy. It occurred to the authors that it should be possible to prevent the emergence of the endocrine-resistant strain of cancer cells by the simultaneous administration of an antimitotic drug which, particularly in the form of an alkylating agent, has been used in the reticuloses. It was decided to use testosterone with oophorectomy as the endocrine part of the therapy. Triethylene thiophosphoramide (Thio-TEPA) was chosen as the alkylating agent.

Initially only patients who had widely disseminated lesions, or who had recurrences after irradiation or surgery, were admitted to the trial. Subsequently, when the efficacy of the treatment was established, the authors took any patient with a carcinoma of the breast irrespective of the stage of the disease. The group treated consisted of 34 patients, whose ages ranged from 23 to 76 years. At the beginning of therapy 17 patients were still within the menarche. One patient, aged 23 years, was pregnant. Eighteen patients had recurrent lesions or metastases following previous surgical or radiation therapy. In 4 of these the recurrence began between 3 and 7 years after their original treatment, and in the remaining 14 within 3 years. Sixteen patients had had no previous treatment. The patients were treated with either thio-TEPA alone (11 patients) or thio-TEPA and testosterone. Marked tumor inhibitory effects were obtained in 30 of the 34 patients. The most satisfactory results were obtained in the group receiving thio-TEPA and testosterone. On the basis of the results obtained in the advanced cancers, a trial of surgery and chemotherapy, as opposed to surgery and irradiation, is advocated for early breast cancers.

PUBLIC HEALTH

Clinical Trials in Infants of Orally Administered **Attenuated Poliomyelitis Viruses.** S. A. Plotkin, H. Koprowski and J. Stokes Jr. Pediatrics 23:1041-1062 (June) 1959 [Springfield, Ill.].

Forty-six infants, ranging in age from 1 day to 6 months, were given more than 100 feedings of living, attenuated poliomyelitis viruses without the occurrence of major or minor illness. The strains used were CHAT, type 1, which was isolated from the feces of a child who had been fed tissue-culture material representing the third human intestinal passage of the SM virus; Wistar, type 1, an isolate in monkey-kidney tissue culture from the stool of an asymptomatic calf that developed type 1 antibodies subsequent to the appearance of viruses in its feces; Jackson, type 2, which is a chick-embryo adapted strain isolated from the stool of a child fed the attenuated MEF-1 strain; P-712, type 2, which was isolated by Fox from the stool of an asymptomatic child; and Fox, type 3, which was isolated from the stool of an asymptomatic child.

All strains except the Jackson were found to be antigenic on oral administration. Response to vaccination was demonstrated in these infants by the presence after vaccination of antibody levels significantly in excess of those attributable to transplacentally acquired antibodies, and by the detection of fecal excretion of poliomyelitis viruses. Infants less than 2 months old were more difficult to immunize than older infants. The evidence suggests that biological immaturity, rather than transplacental antibodies, caused the difference. When the 3 types of poliomyelitis viruses were fed at 3-week intervals, responses occurred to all types. No interference between types was observed when they were fed in all possible sequences. Three infants who were given a second feeding of homotypic attenuated poliomyelitis viruses 3 to 5 months after a successful vaccination showed resistance to intestinal reinfection. It can be concluded from these studies that vaccination against poliomyelitis with orally administered, living, attenuated viruses is entirely feasible in infants over 2 months of age, if 3-week intervals are allowed between feedings of the 3 types of viruses.

Vaccination Against Poliomyelitis: Practical Data. P. Lépine. Presse méd. 67:941-943 (May 9) 1959 (In French) [Paris].

French poliomyelitis vaccine consists of an aqueous suspension of a mixture of inactivated cultures of the 3 types of poliomyelitis viruses. Inactivation is obtained with beta-propiolactone after attenuation with formaldehyde at a low temperature. This guarantees conservation of the antigenic power. Vaccination should be performed with 3 hypodermic injections of 1 ml. of the vaccine. There should be an interval of at least 3 weeks between the first and second injections, although a month would be even better. However, there should not be a lapse of more than 3 months between the first and second injections and of more than 7 months between the second and third injections. Revaccination must take place at the end of one year with a dose of 1.5 ml. There has been discussion in the press of oral vaccination with living, attenuated poliomyelitis viruses. The procedure appears easy, interesting, and economical. However, it has not been possible to obtain an orally administered vaccine simultaneously active against the 3 types of poliomyelitis viruses with this procedure. For the moment such a procedure is only conceivable in case of a serious epidemic due to a single viral type.

BOOK REVIEWS

Trauma. By Harrison L. McLaughlin, M.D., Professor of Clinical Orthopedic Surgery, College of Physicians and Surgeons, Columbia University, New York. Cloth. $18. Pp. 784, with illustrations. W. B. Saunders Company, 218 W. Washington Sq., Philadelphia 5; 7 Grape St., Shaftesbury Ave., London, W. C. 2, England, 1959.

This volume represents an excellent series of specialized monographs, written for the most part by senior members of the staff of Presbyterian Hospital, New York. It is difficult to prepare a closely cohesive work covering all phases of this subject, since the understanding and treatment of injury to the human body necessarily involves familiarity with all of the many special fields of medicine. In general the book is well organized, and this should make it particularly useful for students, interns, and residents and as a quick reference work for the management of some special problem. For the student, it is well worth reading in its entirety. After a general discussion of the local, regional, and systemic responses to injury and the general principles of the treatment of trauma are several sections dealing with the specialized nature of injury to the various systems and anatomic structures. Each is prefaced by a discussion of the surgical anatomy involved. Illustrations are profuse and, for the most part, pertinent.

The chapter on General Principles in the Treatment of Trauma is particularly valuable, especially with regard to the early management of fractures, and should provide a useful guide for those treating injuries in the emergency room. Although there is some mention of other types of injury and a section on therapeutic priorities in multiple injuries, a discussion of the assessment and immediate treatment of the unconscious patient per se would have been most helpful, particularly for medical students and young physicians. Undoubtedly proper triage and treatment of the severely injured patient within the hospital is assumed, but in the interests of objectivity the subject should have received more emphasis. Although one gains the impression that there is a heavy orientation toward a detailed discussion of skeletal injury, this is perhaps justifiable. The book as a whole represents the unified and coordinated approach to the problem of injury of a hospital staff well qualified by training and experience.

Cancer. Volume 5. Part IX: Radiotherapy. Edited by Ronald W. Raven, O.B.E., T.D., F.R.C.S., Joint Lecturer in Surgery, Westminster Medical School, University of London, London. Cloth. $18. Pp. 406; 19, with 136 illustrations. Butterworth & Co. (Publishers) Ltd., 88 Kingsway, London, W. C. 2, England; 1367 Danforth Ave., Toronto 6, Canada, 1959.

The previous volumes which presented various aspects of the problem in an authoritative fashion are now followed by a fifth devoted to radiotherapy. Like its predecessors, this volume presents a concise review of the problems by a number of qualified authorities, mainly from England, but also from Ireland and Canada. It is astonishing how much useful information has been compressed into individual chapters which average only 15 pages. A short historical review of the problem is followed by seven chapters dealing with the technical aspects of, reactions to, and measures of protection against radiotherapy. The rest of the book discusses therapy as applied to different organs. Short reviews of clinical and pathological aspects of the various types of tumors are followed by discussions of techniques of treatment, results of and indications for radiation, and, in many instances, evaluations of the respective values of radiotherapy and surgery and contraindications to and complications of treatment. The book is extensively illustrated with diagrams, clinical figures, reproduction of gross pathological specimens, and photomicrographs. The selection of pictures supplements a lucid and well-written discussion. Obviously, in a field of such rapid progress, the selection of the material is bound to be subjective, and there may be areas of disagreement. In view of its excellent organization, it should be a very useful reference book for the clinician or pathologist who wishes to orient himself about the various and often difficult problems of radiotherapy.

Textbook of Toxicology. By Kenneth P. DuBois, M.Sc., Ph.D., Professor of Pharmacology and Director, United States Air Force Radiation Laboratory, University of Chicago, Chicago, and E. M. K. Geiling, Ph.D., M.D. Cloth. $6.50. Pp. 302, with illustrations. Oxford University Press, 417 Fifth Ave., New York 16, 1959.

This comprehensive new textbook presents its subject matter in a concise, understandable manner. The phenomenal expansion of industry; the widespread use of atomic energy; the growth of all branches of chemistry; the increase in the use of chemical agents for industrial, agricultural, and household purposes; and the recognition of the rights of the individual to protection against possible hazards have introduced many new toxicologi-

---

These book reviews have been prepared by competent authorities but do not represent the opinions of any medical or other organization unless specifically so stated.

cal problems. With these advances has come the need for a textbook which presents the essentials of toxicology as an introduction to the subject and as a source of information. This book is designed to cover this need for medical students, graduate students, and undergraduates who are interested in the general principles of toxicology and in facts with practical application. It should also be of great use to the practicing toxicologist, general physician, and research worker.

The historical development, general principles, and medicolegal aspects of toxicology are discussed in the first chapters. Later chapters include general considerations on airborne poisons, information on individual chemicals, plant and animal poisons, and relatively new subjects such as radiation hazards, pesticides, and household poisons. Information concerning the effects of different classes of chemical compounds, the practical circumstances under which poisoning can occur, diagnosis, and treatment are given. The practical value of this book is increased by numerous tables that show the facts and figures pertinent to problems of accidental poisoning. The acquisition of knowledge of the symptoms and of recommended methods of treatment of poisoning has become an important phase in the education of physicians who, in addition to handling the medical problems concerning these agents, are in an excellent position, together with the pharmacist, to educate the public about the hazards and benefits derived from the use of chemical compounds.

The Biochemistry of Clinical Medicine. By William S. Hoffman, Ph.D., M.D., F.A.C.P., Professorial Lecturer in Medicine, University of Illinois College of Medicine, Chicago. Second edition. Cloth. $12. Pp. 734, with 63 illustrations. Year Book Publishers, Inc., 200 E. Illinois St., Chicago 11, 1959.

The regard in which the first edition of this book has been held since its appearance in 1954 is further enhanced by the careful revision in this new edition. This work covers many fields of medicine in which biochemical understanding can help the clinician in his diagnosis, prognosis, and treatment of disease. The chapters on diabetes mellitus, hepatitis, nephritis, cirrhosis of the liver, and gout show the author's thorough knowledge. His interest in the application of all biochemical fields to medicine is reflected in the character of his discussions; he has given much thought to the development of these discussions from the point of view of the clinician rather than from the point of view of the biochemist. The subject matter is presented by explanation, manner of derivation, and clinical application. The approach, therefore, is essentially biochemical. While not drastically altered, much new material has been added to bring some of the topics up to date. Coverage of the literature which is one of the weaknesses of this as well as the first edition, has been extended to 1958. The author's effort toward simplification for the benefit of the physician leads to a continuance of the old manner of reporting electrolyte concentrations, which is confusing and of little value. More drastic revision here would have been an improvement. This is an excellent book for the practitioner. The author has provided a comprehensive and integrated coverage of the application of biochemistry to the practice of medicine in an interesting, instructive, and serviceable manner.

Gynecologic Endocrinology. By Gardner M. Riley, Ph.D., Associate Professor of Obstetrics and Gynecology, University of Michigan Medical School, Ann Arbor. Foreword by Norman F. Miller, M.D., Professor and Chairman of Department of Obstetrics and Gynecology, University of Michigan Medical School. Cloth. $8.50. Pp. 330, with 72 illustrations. Paul B. Hoeber, Inc. (medical book department of Harper & Brothers), 49 E. 33rd St., New York 16, 1959.

The author has attempted the difficult task of condensing the field of gynecologic endocrinology into a book of 330 pages. In large part, he has succeeded. The factual material presented and the extensive bibliography give an adequate introduction to the subject. The sections on basic physiology and laboratory tests are the highlights of the book. Physicians should also appreciate the listing of available endocrine preparations, by both generic and trade names. Though incomplete, this formulary is adequate for a basic therapeutic armamentarium. The section on clinical syndromes is by far the weakest portion of the book, but it is adequate for an introduction. Controversial points are avoided, often wisely, but sometimes to the detriment of the book. In a few instances, the information given by the author on basic etiology has been superseded by more recent data. The inclusion of concepts of the causes of certain conditions would have added to the book's value. The detailed emphasis on laboratory studies and methods seems unwarranted in a book designed for the clinician. The section on physiology and the bibliography, however, make the book a worthwhile addition to the library of those physicians interested in this phase of diseases of women.

Mental Subnormality: *Biological, Psychological, and Cultural Factors.* By Richard L. Masland, Seymour B. Sarason and Thomas Gladwin. Survey of research sponsored by National Association for Retarded Children. Cloth. $6.75. Pp. 442, with illustrations. Basic Books, Inc., 59 Fourth Ave., New York 3, 1958.

This informative book is made up of two separate reports. Although they vary in opinions as to the cause of mental subnormality, they definitely contribute to the understanding of this problem. The author of the first section is a neurologist and psychiatrist who extensively reviews the literature regarding the etiological factors during the prenatal, perinatal, and postnatal periods. He also attempts to inspire the reader so that more research in genetics, biochemistry, and the social sciences can be developed.

The second section is written by a psychologist and an anthropologist who have been closely associated with the problem. They discuss the postnatal psychological and cultural causes of mental retardation in the mildly retarded, which includes the largest percentage of such persons. They also discuss the shortcomings of current psychological tests and their interpretations. Research in medicine, biochemistry, psychology, sociology, and other fields is strongly recommended. This excellent volume has an extensive bibliography which should be read by all pediatricians, neurologists, psychiatrists, psychologists, social scientists, and educators.

Orthopaedics: Principles and Their Application. By Samuel L. Turek, M.D., Attending Orthopaedic Surgeon, Weiss Memorial Hospital, Chicago. Cloth. $22.50. Pp. 906, with 600 illustrations. J. B. Lippincott Company, E. Washington Sq., Philadelphia 5; 4865 Western Ave., Montreal 6; Pitman Medical Publishing Company, Ltd., 39 Parker St., London, W. C. 2, England, 1959.

To anyone engaged in the teaching of residents in orthopedic surgery this book may well be the fulfillment of a dream. Active orthopedists have all wished that they might find the time to impart their knowledge by producing a volume such as this. This book presents the accumulation of many years of thoughtful collection of data, tempered by the author's experience and broadmindedness. It is to the author's credit that he has treated controversial subjects with short, but adequate, presentations of other methods of treatment. He uses admirable restraint and presents a conservative approach.

This volume should be of immense value, not only to residents but also as a ready reference book for the active practitioner, orthopedist, general surgeon, and internist. The format of this volume is such that few subjects in orthopedics will be difficult to locate. It is gratifying to note that fractures as such were omitted from the subject matter. This reflects the restraint of the author and his willingness to leave this matter to recent standard textbooks on the subject. Perhaps, some day, he may present the profession with a volume on fractures as excellent and concise as is this one.

Progress in Allergy (Fortschritte der Allergielehre). Vol. V. Edited by Paul Kallós. Contributors: St. V. Boyden et al. Cloth. 82 Swiss francs. Pp. 508, with 103 illustrations. S. Karger AG., 25 Arnold Böcklinstrasse 25, Basel, Switzerland; Swiss Bank Corporation, New York, 1958.

The fifth volume of this series, like some of its predecessors, is a review of selected topics on immunology. The seven selected subjects are Diffusion–in Gel Methods for Immunological Analysis; The Release of Histamine; The Immunological Response to Antigens of the Tubercle Bacillus, Some Experimental Aspects; Studies on the Mechanism of Hemolysis by Antibody and Complement; Tissue Transplantation Immunity; Cell Lysis and Related Phenomena in Hypersensitive Reactions, including Immunohematologic Diseases; and Immediate Reactions in the Skin of Experimental Animals Provoked by Antibody–Antigen Interaction.

All of the chapters are well written and thorough. The multiple topics covered in the chapter on cell lysis and related phenomena deserve particular mention as an example of brevity and thoroughness. In less than 90 pages this author discusses a variety of important subjects, quoting from 1,118 references. Similar thoroughness is found in most of the other chapters, particularly those on complement and on tissue transplantation immunity. An attempt at establishing some pattern of unity in the diverse subjects discussed is made by the editor in an interesting introductory chapter. He outlines the borders of present knowledge of allergy and indicates how future work in each of the fields covered in this volume might extend these borders. This excellent review of selected subjects should be of great value to advanced workers in the field of allergy.

Clinical Orthopaedics. Number 13: Spring, 1959. Anthony F. DePalma, editor-in-chief. With assistance of associate editors, Board of Advisory Editors, and Board of Corresponding Editors. Cloth. $7.50. Pp. 393, with illustrations. J. B. Lippincott Company, E. Washington Sq., Philadelphia 5; 4865 Western Ave., Montreal 6, Canada; Pitman Medical Publishing Company, Ltd., 39 Parker St., London, W. C. 2, England, 1959.

This volume is similar in format to the preceding ones but also includes the cumulative index for volumes 7 to 12. The first article is a tribute to the late Dr. Sterling Bunnell and gives a brief review of his many accomplishments, with stress on his interest in and his influence on surgery of the hand. The following 17 chapters are devoted to surgical problems of the hand, a field in which Dr. Bunnell was a pioneer. Chapter 2 is most interesting as it deals with the comparative anthropology of man's hand. All too few orthopedists have sufficient knowledge of this aspect of their field. The other chapters in this section are well written and amply illustrated. Although it presents nothing really new, this section constitutes an excellent review and stresses "conservative therapy" in the sense of saving everything that will improve function rather than a merely nonoperative approach. The second section of the book deals primarily with general orthopedic problems. These are adequately covered and most chapters are followed by a summary. Most articles have a bibliography. As is usual in any volume of this kind, some methods of treatment are controversial and this, in and of itself, should stimulate the reader. Like its predecessors, this is a good reference book and handy reading for medical and orthopedic library use.

QUESTIONS AND ANSWERS

UNEXPLAINED DEATH OF INFANT

To the Editor:—*A 21-month-old twin had a slight cough late one evening. The next day he developed a fever, labored respirations, and some cyanosis. At the hospital, a chest x-ray showed a massive shift to the left, with the trachea appearing to pass into the left lung field and with collapse of the left lung. Bronchoscopy showed no foreign body. He was given gamma globulin, therapy with penicillin intravenously and chloramphenicol was started, and he was put into an oxygen tent. At one time, an oxygen flow of 12 liters per minute was needed to reverse the cyanosis. The leukocyte count was 36,000 per cubic millimeter. His temperature varied between 102 and 103 F (38.9 and 39.4 C). He labored on; his respiration would falter and then go on. A half-hour after examination by a consultant, the child died suddenly. Autopsy showed only inflammatory changes. Bacterial culture so far has grown nothing. Could hydrocortisone intravenously or one of the other corticosteroids have given this infant a better chance? Is a tracheotomy usually advisable in a case like this? Could consultation, for a critically ill infant, by interrupting the oxygen supply, have contributed to the cause of death?* *M.D., Pennsylvania.*

Answer.—It is difficult to speculate regarding the exact etiology of the condition described. Fulminant pneumonia in infancy will sometimes follow such an unrelenting course, but this does not adequately explain the massive shift of the mediastinum to the left. Early in infantile pneumonia there may be some degree of shift toward the affected and partially atelectatic side, but not to the degree described. Foreign body in a left major bronchus was apparently excluded by the bronchoscopy and the autopsy findings. No changes are described which might point toward pneumothorax on the right. It would be interesting to reexamine the x-ray films for any additional evidence they might provide.

Apart from the remarkable mediastinal shift, the high leukocyte count points toward bacterial infection, especially suggesting the pneumococcus or perhaps the staphylococcus as the cause of fulminant disease. This would necessitate the assumption that the extreme shift of the trachea and mediastinum was perhaps more apparent in the x-ray than actually present. One is tempted to conclude that overwhelming pneumonia was the cause of death.

In retrospect, hydrocortisone might have been effective in arresting the precipitate course of disease until adequate antibiotic response could be established, but this is highly problematical under the conditions which are described. The antibiotics given would seem to be appropriate to the probable bacterial etiology. Tracheotomy would be inadvisable because bronchoscopy apparently demonstrated an adequate airway leading to the lower bronchi. Tracheotomy could have been effective only if there had been obstruction in the upper air passages. Unless bronchoscopy itself caused obstruction due to edema in the region of the larynx, tracheotomy would have only added another difficulty. Gamma globulin was apparently given on the suspicion that this child might have a deficiency; while this was certainly harmless, it was ineffective and probably inappropriate. Consultation and careful examination is a manifest necessity in such a desperate situation, and it is most unlikely that the brief interruption of oxygen administration necessary for adequate examination contributed at all to the end-result.

EMERGENCY OXYGEN ADMINISTRATION

To the Editor:—*As chairman of a county medical committee, I am interested in the value of oxygen (given by resuscitator) in acute pulmonary and cardiovascular emergencies. Please give an opinion on this.*

Leonard B. Shpiner, M.D., Kankakee, Ill.

Answer.—The Pulmotor is an apparatus, designed in Germany and introduced in the United States, for producing artificial respiration by forcing air into the lungs and, when they are distended, sucking out expired air. The American counterpart is called the resuscitator, and it forces oxygen from tanks into the lungs and sucks out expired breath much the same as the Pulmotor. Pulmotors are no longer marketed in the United States. The inhalator is an apparatus for administering oxygen to patients with embarrassed respiration but who are not in the state of apnea. The modern portable appliance for artificial respiration usually combines the resuscitator, the inhalator, and the oxygen tanks. This unit is also named a resuscitator in the United States, but the name is a misnomer since the inhalator is part of the equipment but not mentioned in the name. The resuscitator-inhalator is an efficient and acceptable apparatus when used by physicians and

The answers here published have been prepared by competent authorities. They do not, however, represent the opinions of any medical or other organization unless specifically so stated in the reply. Anonymous communications cannot be answered. Every letter must contain the writer's name and address, but these will be omitted on request.

properly trained nonmedical rescue agencies. The resuscitator is recommended for treatment of persons during drowning, gas poisoning, and suffocation, but often the device is not at the scene of the accident; therefore, it does not replace the necessity of knowing and practicing a good method of manual artificial respiration.

Answer.—Resuscitators sometimes are used to administer oxygen quickly in emergency situations, even though the exact diagnosis is not known to lay rescue-squad members and nonmedical attendants in hospital emergency rooms. Considering the acute conditions as a group, much more benefit will come from administering the oxygen than from withholding it. The only important physiological state in which there is contraindication to oxygen therapy is marked respiratory acidosis with compensatory rise in bicarbonate level, as in severe emphysema with infection. This condition constitutes a minority of those encountered, and administration of oxygen to such patients will be discontinued soon, if indicated, because medical care presumably will be available quickly.

Since most of the patients are breathing, the resuscitator mechanism is adjusted to deliver oxygen by steady flow at the rate desired. In case of apnea, the mechanism may be adjusted so that alternating pressure levels result in artificial ventilation of the lungs. Years ago, Drinker, Haggard, and others objected to the use of Pulmotors for ventilating the lungs in case of apnea, and the term Pulmotor remains in disrepute. Well-designed and properly adjusted resuscitators now available may be used safely in emergencies. Medical consultants should be available to rescue-squad members. Since the administration of oxygen frightens some patients, attendants should be instructed appropriately.

ELECTROSHOCK IN HEART DISEASE

To the Editor:—*A 79-year-old woman with arteriosclerotic heart disease and emotional instability attempted suicide by taking an overdose of barbiturates. What prophylactic management is recommended?*

M.D., New York.

Answer.—If a person is depressed to such a degree that she attempts suicide, there is no way to prevent recurrence of such an attempt. Though the family of the patient promises continual supervision, or even though 24-hour nursing supervision is provided at the patient's home, one cannot help but feel that all plans are doomed to fail sooner or later. This fact cannot be emphasized too strongly to the relatives. A suicidal patient belongs in a closed ward, and some even manage to commit suicide within such a ward. The sovereign treatment for depression of this degree is still electric shock, which, with proper precautions, such as the combined use of barbiturate anesthesia and relaxant medication, can be carried out even in the presence of a somewhat damaged heart. The decision regarding shock treatment should be made after thorough examination by a heart specialist who is well versed in the hazards of electric shock treatment.

TRAUMATIC HEPATITIS

To the Editor:—*An apparently healthy male, aged 45, sustained moderately severe trauma for several hours to the upper right quadrant of his abdomen. His complaint was pain in this area, and he noted that his urine was dark in color. Physical examination revealed no fever and no tenderness in the upper right quadrant or over the kidneys. Urine examination was normal except for a strongly positive urobilinogen finding. There was no jaundice. Gallbladder visualization study was unsatisfactory, but when double the normal amount of contrast medium was given the gallbladder was visualized and was seen to empty and function in a normal manner. No stones or abnormalities were detected. On later urine examination, no urobilinogen was found. This sequence of events extended over a period of seven days. With the evidence listed, particularly the history of trauma, is it reasonable to entertain the possibility of a traumatic cholecystitis and/or traumatic hepatitis?*

Frank H. Jaklitsch, M.D., Westbury, L. I., N. Y.

Answer.—The development of urobilinogenuria after abdominal trauma strongly suggests a possible hematoma. This could be located under the capsule of the liver or in retroperitoneal structures. Disintegration of any volume of blood will produce a urobilinogenuria of the type described here. It is rare to have cholecystitis arise from external trauma. One would expect that an injury of sufficient magnitude to damage the gallbladder would probably produce a laceration or rupture of the liver, with its attendant grave prognosis. Traumatic hepatitis is not known to exist—the only liver lesion after injury being a nodule or a scar.

EPIDERMOLYSIS BULLOSA

To the Editor:—*Please give information regarding recent research on the cause of epidermolysis bullosa. What is the best treatment, apart from prophylactic measures?*

M.D., Canada.

Answer.—Unfortunately, the cause of epidermolysis bullosa is unknown except that it is a genetic defect which may be either dominant or recessive. The disease varies in severity, and it is possible that mild, unrecognized examples are not too uncommon. As a rule, the condition tends to persist, although in some instances it may decrease in severity or disappear at puberty. Treatment is [illegible] satisfactory and follows fashions. Most reports of successful therapy have contained only one case because of the rarity of the disorder. More recently suggested measures include therapy with cortisone (especially when given parenterally), antimalarial drugs, and diiodohydroxyquin. The paucity of research in this disease is underscored by the fact that not a single article on epidermolysis bullosa has been summarized in the "Yearbook of Dermatology and Syphilology" during the past three

CARE OF THE AGED EPILEPTIC

To the Editor:—*May I ask what the judgment would be on admitting persons with severe epilepsy to homes for the aged? What is the usual custom in such cases?*

Frank G. Keller, M.D., North Manchester, Ind.

Answer.—There can hardly be any general custom or rule. The severity will vary for each person, and facilities for adequate drug or other treatment will vary for each home. The addition of convulsions to whatever other physical disabilities the aged person might have should not condition his admission to a home for the aged, provided, of course, that appropriate medical care is available.

GAMMA GLOBULIN DEFICIENCY

To the Editor:—*Is there an error of units in the dose of gamma globulin suggested for the management of gamma globulin deficiency in the answer on page 1547 of the March 28, 1959, issue of* The Journal? *Many of the published recommendations have mentioned a dose of 0.1 Gm. per kilogram of body weight monthly. Since the solutions available contain about 165 mg. of gamma globulin per milliliter, this would be equivalent to about 0.6 ml. per kilogram, or 0.3 ml. per pound of body weight, and not the 0.1 ml. per kilogram suggested in the answer.*

Dr. John W. Palmer
4501 Colorado Blvd.
Los Angeles 39.

The above comment was referred to the consultant who answered the original question, and his reply follows.—Ed.

To the Editor:—*Currently, the treatment for a patient with agammaglobulinemia (and hypogammaglobulinemia) is 20 to 40 cc. of gamma globulin for children (according to weight) and 30 to 50 cc. for adults, administered intramuscularly and given monthly.*

YELLOW JACKET STING

To the Editor:—*Information about successful desensitization of a patient allergic to insect stings should be given to the author of the question on yellow jacket sting in* The Journal, *May 30, 1959. My experience with this is recorded (Texas* [illegible] *Med. 46:639 [Aug.] 1950), and a recent paper by Thomas* (Virginia M. Month. 85:415 [Aug.] 1958) *reports similar results. I have cared for 40 patients who have had moderate to severe anaphylactic reactions prior to desensitization and who, after the process, had only local reactions to subsequent stings. Desensitization can be effective and is often lifesaving. Once there has been a severe reaction to an insect sting the patient should always have sublingual isoproterenol tablets with him for immediate prophylactic therapy. This is not as effective as epinephrine but will provide time to obtain the latter drug.*

Boen Swinny, M.D.
314-20 Medical Arts Bldg.
San Antonio 5, Texas.

The above comment was referred to the consultant who answered the original question, and his reply follows.—Ed.

To the Editor:—*The comment and reference articles reemphasize the seriousness of insect stings and anaphylactic shock which may occur in the hypersensitive patient. They also, I believe, strongly support the opinion that, while desensitization of susceptible patients has been done, the results have not been completely satisfactory. Immunization is quite specific and to be effective must be done with the venom of the particular insect to which the person is sensitive. For protection to be totally effective the immunizing injections should be on a continuing schedule. Except within limitations I do not think immunization is wholly dependable.*

The best medicament for use in treating a severe anaphylactic reaction is epinephrine. A person likely to have such a reaction can usually be provided with this drug and a syringe for an immediate injection in an emergency. In the reply to the original inquiry the function of epinephrine for the anaphylactic symptoms and the local treatment for the immediate relief of pain may not have been clearly delineated. The suggested alkaline local treatment should not be considered as effective care for the anaphylactic shock.

Editor's Note: The comment and answer on the practical value of patient desensitization may appear to be in conflict, but this is actually a matter of semantics. The intent of publication is to inform the physician as broadly as possible on this subject. There have been several other recent articles which will be of interest to the reader.
